262,011. DUO-BAA-CO DOUBLEBASE. Registered Sept. 24, 1929. The Embalmers' Supply Company, Inc., Westport, Conn., a corporation of Connecticut. Renewed Sept. 24, 1949. EMBALMING FLUID. Class 6.

TRADE-MARK REGISTRATIONS REPUBLISHED

The following marks registered under the act of 1905, or the act of 1881, are published under the provisions of section 12(c) of the Trade-Mark Act of 1946. These registrations are not subject to opposition but are subject to cancellation under section 14 of the act of 1946.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Reg. No. 119,638. Registered Dec. 11, 1917. BROOS & COBB, INCORPORATED, Boston, Mass., a corporation of Massachusetts. Republished by registrant.

SNOBUCK

FOR UPPER LEATHER FOR BOOTS AND SHOES. Claims use since January 1917.

Reg. No. 282,092. Registered Apr. 7, 1931. TENNESSEE MINERAL PRODUCTS CORPORATION, New York, N. Y. Republished by United Feldspar & Minerals Corporation, New York, N. Y., a corporation of Delaware.

CHEMI-TROLD

FOR FELDSPAR. Claims use since July 15, 1930.

Reg. No. 282,334. Registered Apr. 21, 1931. TENNESSEE MINERAL PRODUCTS CORPORATION, New York, N. Y. Republished by United Feldspar & Minerals Corporation, New York, N. Y., a corporation of Delaware.

GRANULAR CHEMI-TROLD GLASSPAR

The word "Granular" is disclaimed apart from the mark as shown.
FOR FELDSPAR.
Claims use since July 15, 1930.

Reg. No. 298,896. Registered Aug. 23, 1932. SOUTH-WESTERN STONE CO., LTD., London, England, a corporation of Great Britain. Republished by registrant.

PERRYCOT

FOR RAW OR PARTLY WORKED STONE. Claims use since Dec. 14, 1931.

Reg. No. 298,250. Registered Oct. 18, 1932. SHELL OIL COMPANY, San Francisco, Calif. Republished by Shell Oil Company, Incorporated, San Francisco, Calif., a corporation of Virginia.

SHELL

FOR PETROLEUM PITCH, A RESIDUE FROM THE DISTILLATION OF CRUDE PETROLEUM OILS.
Claims use since Oct. 15, 1929.

Reg. No. 323,745. Registered Apr. 30, 1935. PACIFIC BONE COAL & FERTILIZING COMPANY, San Francisco, Calif. Republished by Consolidated Chemical Industries, Inc., San Francisco, Calif., a corporation of Delaware.

FILTREX

FOR ANIMAL CHARCOAL (BONE BLACK) USED AS A DECOLORIZING CARBON.
Claims use since Nov. 14, 1934.

Reg. No. 344,669. Registered Mar. 30, 1937. CAROLINA PYROPHYLLITE COMPANY, New York, N. Y., a corporation of North Carolina. Republished by registrant.

CAPYCO

FOR PYROPHYLLITE.
Claims use since Oct. 23, 1936.

Reg. No. 377,339. Registered Apr. 30, 1940. UNITED FELDSPAR CORPORATION, New York, N. Y. Republished by United Feldspar & Minerals Corporation, New York, N. Y., a corporation of Delaware.

LITHOSPAR

FOR MIXTURE OF SPODUMENE AND FELDSPAR.
Claims use since July 5, 1939.

Reg. No. 403,516. Registered Sept. 28, 1943. HARRY T. CAMPBELL SONS' CORPORATION, Towson, Md., a corporation of Maryland. Republished by registrant.

The drawing is lined for blue and red.
FOR EXTREMELY FINE CALCIUM CARBONATE PRODUCED FROM CALCITE, A HIGH CALCIUM LIMESTONE.
Claims use since Nov. 1, 1942.

Reg. No. 418,289. Registered Dec. 11, 1945. HARRY T. CAMPBELL SONS' CORPORATION, Towson, Md., a corporation of Maryland. Republished by registrant.

The drawing is lined for the color red.
FOR MINED CALCIUM STONE, A CRUDE MINERAL.
Claims use since Feb. 21, 1936.

CLASS 2

RECEPTACLES

Reg. No. 158,886. Registered Sept. 19, 1922. THE ATLANTIC STAMPING COMPANY, Rochester, N. Y., a corporation of New York. Republished by registrant.

ATLANTIC

FOR METAL (GALVANIZED IRON OR TIN) PAILS, COAL HODS, DINNER PAILS, SPRINKLING POTS, BUCKETS, CANS, TOTE BOXES, AND RADIATOR FILLERS.
Claims use since about Mar. 1, 1904.

Reg. No. 263,476. Registered Nov. 5, 1929. B. ALTMAN & Co., New York, N. Y., a corporation of New York. Republished by registrant.

B. Altman & Co.

FOR JEWELRY FOR PERSONAL WEAR AND DRESS WEAR NOT INCLUDING WATCHES; SILVER TABLEWARE AS FOLLOWS: KNIVES, FORKS, SPOONS, LADLES, SERVERS, TONGS, TEA AND COFFEE SETS, WATER PITCHERS, WATER GOBLETS, SHERBET GLASSES, BEVERAGE GLASSES, BERRY, SALAD, AND MAYONNAISE BOWLS, BREAD AND SERVING TRAYS, SANDWICH, SERVICE AND BREAD AND BUTTER PLATES, BON-BON DISHES, FLOWER VASES, FLOWER BASKETS, FLOWER CENTERPIECES, CANDLESTICKS, NAPKIN RINGS, TEA STRAINERS, SALT AND PEPPER SHAKERS, BEVERAGE SHAKERS, MEAT PLATTERS, GRAVY BOATS AND TRAYS, SUGAR AND CREAM SETS, VEGETABLE DISHES, CHOP DISHES, COMPOTIERS, EGG CUPS, TABLE BELLS, TEA BALLS, BABY CUPS, BOWLS AND PLATES; SILVER TOILET WARE AS FOLLOWS: MIRRORS, BRUSHES, COMBS, POWDER JARS, SALVE JARS, PERFUME BOTTLES, TRAYS, SHOEHORNS, BUTTON HOOKS, NAIL FILES, SCISSORS, PICTURE FRAMES, NAIL POLISHERS, AND HAIR RECEIVERS; STERLING SILVER NOVELTIES AS FOLLOWS: CIGAR AND CIGARETTE CASES, CIGARETTE BOXES, CIGARETTE HOLDERS, MATCH BOXES, POCKET FLASKS, ASH TRAYS, POCKETKNIVES, KEY RINGS, BILL CLIPS, POCKET COMBS, POCKET MIRRORS, POWDER CASES, AND PERFUME FLASKS.
Claims use since about 1889.

Reg. No. 296,722. Registered Aug. 16, 1932. FURNITURE STYLISTS INC., Chicago, Ill. Republished by Sterling, Inc., New York, N. Y., a corporation of New York.

The words "Feather-Weight Trays" are disclaimed apart from the mark as shown.
FOR TRAYS MADE OF WOOD.
Claims use since Feb. 18, 1931.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Reg. No. 440,199. Registered Aug. 17, 1948. CHARLES WEILL, INC., New York, N. Y., a corporation of New York. Republished by registrant.

Danby

FOR HAND BAGS AND TRAVELING CASES MADE OF LEATHER OR SIMULATION THEREOF FOR MEN AND WOMEN.
Claims use since Feb. 21, 1925.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Reg. No. 217,453. Registered Aug. 31, 1926. SYLVAN M. EDISON, doing business as The Edison Laboratories, Chicago, Ill. Republished by Miles Laboratories, Inc., Elkhart, Ind., a corporation of Indiana.

All the wording (except the word "Sanident") and the representation of the goods are disclaimed apart from the mark as shown.
FOR DENTAL PLATE CLEANSER.
Claims use since Jan. 10, 1926.

Reg. No. 254,269. Registered Mar. 19, 1929. CALIFORNIA BLEACHING WATER CO., INC., San Francisco, Calif. Republished by Lady's Choice Foods, Los Angeles, Calif., a corporation of California.

SANI-CLOR

FOR WASHING FLUID.
Claims use since Aug. 1, 1928.

Reg. No. 257,361. Registered June 4, 1929. CONSOLIDATED RENDERING COMPANY, Boston Mass., a corporation of Maine. Republished by registrant.

CORENCO

FOR TALLOW AND GREASE FOR SOAP PURPOSES.
Claims use since about July 1920.

Reg. No. 257,999. Registered June 25, 1929. YANKEE POLISH CO. INC., New York, N. Y., a corporation of New York. Republished by registrant.

FOR SHOE POLISH.
Claims use since Aug. 1, 1928.

Reg. No. 264,331. Registered Nov. 26, 1929. GEORG SCHICHT A. G., Aussig, Czechoslovakia. Republished by Severoceske Tukove Zavody (Drive Jiri Schicht) Narodni Padnik, Usti nad Labem, Czechoslovakia, a corporation organized under the laws of Czechoslovakia.

FOR SOAP, WASHING POWDER.
Claims use since 1920.

Reg. No. 273,109. Registered July 22, 1930. ABRAHAM & STRAUS, INC., Brooklyn, N. Y., a corporation of New York. Republished by registrant.

MONTAUK

FOR SOAP.
Claims use since Mar. 1, 1929.

Reg. No. 370,229. Registered Aug. 22, 1939. ROCHESTER GERMICIDE COMPANY, Rochester, N. Y., a corporation of New York. Republished by registrant.

EMULSO

FOR LIQUID SOAP FOR USE ON FLOORS, WOODWORK, AUTOMOBILE BODIES, AND THE LIKE.
Claims use since March 1922.

Reg. No. 402,401. Registered July 27, 1943. CHARLES M. ADNIS, New York, N. Y. Republished by registrant.

SOL-SPEEDI-DRI

The words "Speedi-Dri" are disclaimed apart from the mark as shown.
FOR CLEANING MATERIAL HAVING OIL AND WATER ABSORBENT AND FIRE PREVENTIVE PROPERTIES.
Claims use since Sept. 28, 1942.

Reg. No. 412,947. Registered Apr. 3, 1945. PALMER COMPANY, INC., Wankesha, Wis., a corporation of Wisconsin. Republished by registrant.

THE Guardian LINE

The word "Line" is disclaimed apart from the mark as shown.
FOR METAL POLISH; LIQUID, POWDER, AND CAKE SOAPS OF ALL KINDS; SCOURING POWDER; SWEEPING COMPOUNDS; LIQUID CLEANERS INCLUDING BLACKBOARD CLEANERS, TOILET BOWL CLEANERS, ANTISEPTIC CLEANERS, SODA CLEANSERS, AND CHEMICAL CLEANERS FOR DAIRIES.
Claims use since Jan. 1, 1944.

Reg. No. 433,883. Registered Nov. 4, 1947. PARK CHEMICAL COMPANY, Detroit, Mich., a corporation of Michigan. Republished by registrant.

The drawing is lined for red.
FOR CHROMIUM CLEANER, DRY CLEANING FLUIDS, WALL AND FLOOR CLEANING COMPOUND, RUG CLEANER, UPHOLSTERY CLEANER, SILVER POLISH, RUBBER DRESSING, LIQUID CLEANERS FOR METAL PARTS, AND TAR REMOVER.
Claims use since September 1930.

CLASS 5

ADHESIVES

Reg. No. 287,061. Registered Sept. 15, 1931. PACIFIC BONE COAL & FERTILISING CO., San Francisco, Calif. Republished by Consolidated Chemical Industries, Inc., San Francisco, Calif., a corporation of Delaware.

LUSTRA GLUE

The word "Glue" is disclaimed apart from the mark as shown.
FOR GLUE.
Claims use since Apr. 10, 1931.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Reg. No. 42,131. Registered Feb. 23, 1904. PINEULE MEDICINE CO., Chicago, Ill. Republished by E. C. De Witt & Co., Inc., Chicago, Ill., a corporation of New York.

Man Zan

FOR PREPARATION FOR ALLEVIATING MILD RECTAL IRRITATIONS ASSOCIATED WITH PILES, ALSO IRRITATIONS CAUSED BY CUTS, BURNS, AND BRUISES.
Claims use since Dec. 1, 1903.

Reg. No. 45,170. Registered Aug. 8, 1905. PINEULE MEDICINE CO., Chicago, Ill. Republished by E. C. De Witt & Co., Inc., Chicago, Ill., a corporation of New York.

ManZan

FOR PREPARATION FOR ALLEVIATING MILD RECTAL IRRITATIONS ASSOCIATED WITH PILES.
Claims use since Dec. 1, 1903.

Reg. No. 45,473. Registered Aug. 22, 1905. E. C. DE WITT & CO., Chicago, Ill. Republished by E. C. De Witt & Co., Inc., Chicago, Ill., a corporation of New York.

Kodol

FOR PREPARATION FOR ALLEVIATING DISCOMFORTS OF EXCESS STOMACH ACIDITY AND IMPROVING THE APPETITE.
Claims use since June 1, 1898.

Reg. No. 54,274. Registered June 26, 1906. THE DR. MILES MEDICAL CO., Elkhart, Ind. Republished by Miles Laboratories, Inc., Elkhart, Ind., a corporation of Indiana.

-ANTI-
Pain Pills.

FOR ANALGESIC AND SEDATIVE.
Claims use since the month of July 1893.

Reg. No. 98,148. Registered July 7, 1914. B. HELLER & CO., Chicago, Ill. Republished by B. Heller & Company, Chicago, Ill., a corporation of Illinois.

The words "Laundry Blue" are disclaimed apart from the mark as shown.
FOR LAUNDRY-BLUING AND LAUNDRY COLORS.
Claims use since December 1894.

Reg. No. 163,004. Registered Jan. 2, 1923. ALABAMA BY-PRODUCTS CORPORATION, Birmingham and Tarrant, Ala., a corporation of Delaware. Republished by registrant, present address Birmingham, Ala.

The trade-mark comprises a diamond shaped center panel in red with the letters "ABC" therein in white. The words "Ammonia, Benzol, Coke, Tar" and "Alabama's Best Coke" are disclaimed apart from the mark as shown.
FOR AMMONIA AND BENZOL.
Claims use since March 1920.

Reg. No. 200,922. Registered July 14, 1925. HAMILTON RUSSELL, Pensacola, Fla. Republished by Rosa Cox Russell, Pensacola, Fla.

COUGH-GONE

FOR MEDICINAL PREPARATION FOR THE TREATMENT OF COUGHS, COLDS, HOARSENESS, SORE THROAT, BRONCHITIS, AND ALL DISEASES OF THE THROAT AND LUNGS.
Claims use since October 1918.

Reg. No. 211,498. Registered Apr. 13, 1926. DR. MILES MEDICAL COMPANY, Elkhart, Ind. Republished by Miles Laboratories, Inc., Elkhart, Ind., a corporation of Indiana.

PURA-LAXA

FOR LAXATIVE MEDICINES.
Claims use since Jan. 21, 1925.

Reg. No. 226,493. Registered Apr. 12, 1927. TINTE ORIENTAL, INC., Mayaguez, P. R. Republished by Gustavo Salvia, doing business under the trade name of Tinte Oriental, Mayaguez, P. R.

FOR SHAMPOOS AND HAIR DYES.
Claims use since Oct. 31, 1923.

Reg. No. 239,245. Registered Feb. 28, 1928. ARWELL PRODUCTS COMPANY, Chicago, Ill. Republished by Arwell, Inc., Waukegan, Ill., a corporation of Illinois.

ARWELL

FOR HOUSEHOLD DEODORANT AND MOTH PREVENTATIVE.
Claims use since Feb. 6, 1927.

Reg. No. 247,209. Registered Sept. 25, 1928. THE GRASSELLI CHEMICAL COMPANY, Cleveland, Ohio. Republished by E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware.

HIGH SPEED

FOR TINNING FLUXES.
Claims use since about Apr. 25, 1928.

Reg. No. 252,456. Registered Feb. 5, 1929. THE NEWPORT COMPANY, Carrollville, Wis. Republished by E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware.

CELANTHRENE

FOR DYES, DYESTUFFS, AND COLORS.
Claims use since June 6, 1928.

Reg. No. 271,248. Registered May 27, 1930. EDWARD A. HENSKE, doing business as Kin-Septic Company, St. Louis, Mo. Republished by York Pharmacal Company, St. Louis, Mo., a corporation of Missouri.

SKIN-SEPTIC

The word "Septic" is disclaimed apart from the mark as shown.
FOR SKIN ANTISEPTIC.
Claims use since Oct. 23, 1929.

Reg. No. 281,237. Registered Mar. 19, 1931. ARWELL PRODUCTS CO., Waukegan, Ill. Republished by Arwell, Inc., Waukegan, Ill., a corporation of Illinois.

Arwellmist

FOR INSECTICIDES, MOTH FUMIGANT.
Claims use since Apr. 3, 1929.

Reg. No. 290,826. Registered Jan. 19, 1932. ARWELL PRODUCTS COMPANY, Waukegan, Ill. Republished by Arwell, Inc., Waukegan, Ill., a corporation of Illinois.

R-WELLENE

FOR ANTISEPTIC.
Claims use since on or about Aug. 21, 1931.

Reg. No. 298,222. Registered Oct. 18, 1932. JOHNSON & JOHNSON, New Brunswick, N. J. Republished by Ortho Pharmaceutical Corporation, Raritan, N. J., a corporation of New Jersey.

ortho-gynol

FOR ANTISEPTIC PREPARATION FOR FEMININE HYGIENE.
Claims use since Sept. 30, 1931.

Reg. No. 302,070. Registered Mar. 28, 1933. PROFESSIONAL PRODUCTS CORPORATION, New Brunswick, N. J., assignor to Johnson & Johnson. Republished by Johnson & Johnson, New Brunswick, N. J., a corporation of New Jersey.

Kalms

FOR TABLETS FOR PAINS, DYSMENORRHEA, HEADACHES, AND THE LIKE.
Claims use since Oct. 1, 1932.

Reg. No. 322,981. Registered Mar. 26, 1935. PACQUIN INC., New York, N. Y. Republished by Pacquin-Lester Company, Litchfield, Conn., a partnership.

Pacquins

FOR HAND CREAM, COLD CREAM, CLEANSING CREAM, VANISHING CREAM, AND LEMON CREAM.
Claims use since Dec. 17, 1920.

Reg. No. 334,036. Registered May 19, 1936. E. R. SQUIBB & SONS, New York, N. Y. Republished by Ortho Pharmaceutical Corporation, Raritan, N. J., a corporation of New Jersey.

Preceptin

FOR ANTISEPTICS AND SPERMICIDES.
Claims use since Jan. 3, 1936.

Reg. No. 347,808. Registered July 6, 1937. CONSOLIDATED CHEMICAL INDUSTRIES, INC., San Francisco, Calif., a corporation of Delaware. Republished by registrant.

REPELLA

FOR FLY REPELLENT.
Claims use since Jan. 1, 1934.

Reg. No. 348,372. Registered July 27, 1937. WISHNICK-TUMPEER, INC., Chicago, Ill. Republished by Witco Chemical Company, Chicago, Ill., a corporation of Illinois.

STEARITE

FOR CERTAIN CHEMICALS—NAMELY, HYDROGENATED STEARINE OF FISH OIL.
Claims use since Jan. 15, 1932.

Reg. No. 357,021. Registered May 24, 1938. CHICAGO PHARMACAL COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

DENTASEPTO

FOR MOUTH WASH.
Claims use since 1915.

Reg. No. 357,215. Registered May 24, 1938. VALENTINE LABORATORIES, INC., Chicago, Ill. Republished by Union Drug Co., Chicago, Ill., a corporation of Illinois.

·TANNETTI·

FOR HYGIENIC PREPARATIONS—NAMELY, VAGINAL JELLY AND ANTISEPTIC POWDERS.
Claims use since Nov. 13, 1933.

Reg. No. 361,211. Registered Oct. 11, 1938. ARWELL, INC., Waukegan, Ill., a corporation of Illinois. Republished by registrant.

Arwell

MOTH MAGIC

The word "Moth" is disclaimed apart from the mark as shown.
FOR CLEANSING, DEODORIZING, AND FUMIGATING PREPARATIONS.
Claims use since Mar. 1, 1938.

Reg. No. 372,931. Registered Nov. 21, 1939. ANSUL CHEMICAL COMPANY, Marinette, Wis., a corporation of Wisconsin. Republished by registrant.

ICE-X

FOR LIQUID TO BE ADDED TO REFRIGERANTS, SUCH AS METHYL CHLORIDE, METHYLENE CHLORIDE AND THE "FREON" REFRIGERANTS FOR USE IN PREVENTING FORMATION OF ICE CRYSTALS IN ELECTRIC REFRIGERATING MACHINES OF COMPRESSOR TYPE.
Claims use since Jan. 9, 1939.

Reg. No. 388,980. Registered July 22, 1941. ROCHESTER GERMICIDE COMPANY, Rochester, N. Y., a corporation of New York. Republished by registrant.

San-o-la

FOR DISINFECTANT AND ANTISEPTIC PREPARATIONS IN LIQUID FORM.
Claims use since 1904.

Reg. No. 395,675. Registered June 2, 1942. CHICAGO PHARMACAL COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

TRIBROMAURO

FOR SEDATIVE USED IN THE TREATMENT OF PERTUSSIS.
Claims use since Oct. 18, 1934.

Reg. No. 395,946. Registered June 16, 1942. DUGAS ENGINEERING CORPORATION, Marinette, Wis. Republished by Ansul Chemical Company, Marinette, Wis., a corporation of Wisconsin.

duMag

FOR DRY EXTINGUISHING COMPOUND FOR MAGNESIUM, POTASSIUM, SODIUM, ALUMINUM, ZINC, IRON, AND OTHER METAL FIRES, INCENDIARIES, AND BURNING INFLAMMABLE MATERIALS.
Claims use since Feb. 16, 1942.

Reg. No. 402,775. Registered Aug. 10, 1943. ANSUL CHEMICAL COMPANY, Marinette, Wis., a corporation of Wisconsin. Republished by registrant.

ANSUL

FOR REFRIGERANTS—NAMELY, SULPHUR DIOXIDE AND METHYL CHLORIDE; CHEMICAL FUMIGANTS—NAMELY, CHLOROPICRIN; COLLOIDAL SULPHUR FOR USE AS FUNGICIDE AND INSECTICIDE; A PREPARATION FOR TREATING SEED AND SOIL TO PREVENT DAMPING-OFF OF SEEDLINGS AND CUTTINGS.
Claims use since Apr. 30, 1915.

Reg. No. 406,058. Registered Mar. 7, 1944. HERMAN BRAUN, doing business as Standard Pharmaceutical Co., New York, N. Y. Republished by Standard Pharmaceutical Co., Inc., New York, N. Y., a corporation of New York.

VALERIANETS

FOR SEDATIVES, PARTICULARLY HERBACEOUS.
Claims use since Sept. 7, 1942.

Reg. No. 409,942. Registered Oct. 31, 1944. DUGAS ENGINEERING CORPORATION, Marinette, Wis. Republished by Ansul Chemical Company, Marinette, Wis., a corporation of Wisconsin.

PLUS-FIFTY

FOR DRY POWDERED CHEMICAL FIRE EXTINGUISHING COMPOSITIONS.
Claims use since Sept. 23, 1943.

Reg. No. 412,129. Registered Feb. 20, 1945. PALMER COMPANY, INC., Waukesha, Wis., a corporation of Wisconsin. Republished by registrant.

THE Guardian LINE

FOR INSECTICIDES; FLY SPRAY; ROACH POWDER; LIQUID DEODORANT; DISINFECTANTS; BOILER COMPOUNDS IN THE NATURE OF A CHEMICAL FOR SOFTENING WATER AND FOR PREVENTING SCALE IN BOILERS, PIPES, ETC.; WATER SOFTENERS; PIPE CLEANERS—NAMELY, A CHEMICAL FOR USE IN OPENING DRAIN PIPES; MOTH REPELLANT AND CREOSOL COMPOUND.
Claims use since Jan. 1, 1944.

Reg. No. 415,068. Registered July 10, 1945. SHELL UNION OIL CORPORATION, San Francisco, Calif. Republished by Shell Chemical Corporation, New York, N. Y., a corporation of Delaware.

IONOL

FOR CHEMICAL PREPARATION FOR INHIBITING OXIDATION.
Claims use since Nov. 15, 1944.

Reg. No. 429,464. Registered Apr. 29, 1947. SHELL OIL COMPANY, INCORPORATED, San Francisco, Calif., a corporation of Virginia. Republished by registrant.

MEDOSOL

FOR INSECTICIDE.
Claims use since Sept. 9, 1946.

Reg. No. 433,428. Registered Oct. 14, 1947. ORTHO PHARMACEUTICAL CORPORATION, Linden, N. J., a corporation of New Jersey. Republished by registrant, present address Raritan, N. J.

ORTHO

FOR VAGINAL CREAMS AND JELLIES, ANTISEPTIC PREPARATIONS FOR FEMININE HYGIENE, AND THERAPEUTIC PRODUCTS FOR USE IN THE MANAGEMENT OF MENOPAUSE.
Claims use since Aug. 28, 1944.

Reg. No. 435,028. Registered Dec. 9, 1947. SHELL CHEMICAL CORPORATION, San Francisco, Calif., a corporation of Delaware. Republished by registrant, present address New York, N. Y.

D-D

FOR SOIL FUMIGANT.
Claims use since Nov. 15, 1946.

Reg. No. 436,111. Registered Jan. 20, 1948. GEORGE MARTIN BROEMMEL, also known as Geo. M. Broemmel, doing business as Broemmel Pharmaceuticals, San Francisco, Calif. Republished by registrant.

Broemmel

FOR MOSQUITO IMMUNIZING AGENT SOLD IN THE FORM OF PILLS, INTRAMUSCULAR INJECTION FOR THE PREVENTION AND TREATMENT OF POISON-OAK AND POISON-IVY POISONING, NASAL, OPHTHALMIC AND THROAT DROPS AND SPRAYS, AND PREPARATIONS IN CAPSULE FORM FOR THE TREATMENT OF HEAD COLDS AND CERTAIN ALLERGIC CONDITIONS ARISING FROM VARIOUS POLLENS.
Claims use since about August 1876.

Reg. No. 440,118. Registered Aug. 10, 1948. THE MABEX CO., Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

MABEX

FOR MOTH CAKES AND CRYSTALS, AND DEODORANTS.
Claims use since 1932.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Reg. No. 263,476. Registered Nov. 5, 1929. B. ALTMAN & CO., New York, N. Y., a corporation of New York. Republished by registrant.

B. Altman & Co.

FOR JEWELRY FOR PERSONAL WEAR AND DRESS WEAR NOT INCLUDING WATCHES; SILVER TABLEWARE AS FOLLOWS: KNIVES, FORKS, SPOONS, LADLES, SERVERS, TONGS, TEA AND COFFEE SETS, WATER PITCHERS, WATER GOBLETS, SHERBET GLASSES, BEVERAGE GLASSES, BERRY, SALAD, AND MAYONNAISE BOWLS, BREAD AND SERVING TRAYS, SANDWICH, SERVICE AND BREAD AND BUTTER PLATES, BON-BON DISHES, FLOWER VASES, FLOWER BASKETS, FLOWER CENTERPIECES, CANDLESTICKS, NAPKIN RINGS, TEA STRAINERS, SALT AND PEPPER SHAKERS, BEVERAGE SHAKERS, MEAT PLATTERS, GRAVY BOATS AND TRAYS, SUGAR AND CREAM SETS, VEGETABLE DISHES, CHOP DISHES, COMPOTIERS, EGG CUPS, TABLE BELLS, TEA BALLS, BABY CUPS, BOWLS AND PLATES; SILVER TOILET WARE AS FOLLOWS: MIRRORS, BRUSHES, COMBS, POWDER JARS, SALVE JARS, PERFUME BOTTLES, TRAYS, SHOEHORNS, BUTTON HOOKS, NAIL FILES, SCISSORS, PICTURE FRAMES, NAIL POLISHERS, AND HAIR RECEIVERS; STERLING SILVER NOVELTIES AS FOLLOWS: CIGAR AND CIGARETTE CASES, CIGARETTE BOXES, CIGARETTE HOLDERS, MATCH BOXES, POCKET FLASKS, ASH TRAYS, POCKETKNIVES, KEY RINGS, BILL CLIPS, POCKET COMBS, POCKET MIRRORS, POWDER CASES, AND PERFUME FLASKS.
Claims use since about 1889.

CLASS 9

EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

Reg. No. 808,811. Registered Nov. 28, 1933. AUSTIN POWDER COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

USED IN 1833 AUSTIN EVER SINCE

The drawing is lined for red.
FOR BLASTING POWDER, PELLET POWDER, DYNAMITE, PERMISSIBLE EXPLOSIVES, CAPS, AND EXPLODERS.
Claims use since about May 1, 1910.

CLASS 10

FERTILIZERS

Reg. No. 89,494. Registered Dec. 17, 1912. PACIFIC BONE COAL & FERTILIZING CO., San Francisco, Calif. Republished by Consolidated Chemical Industries, Inc., San Francisco, Calif., a corporation of Delaware.

PROSPERITY

FOR FERTILIZER.
Claims use since July 1, 1912.

Reg. No. 254,910. Registered Apr. 2, 1929. CONSOLIDATED RENDERING COMPANY, Boston, Mass., a corporation of Maine. Republished by registrant.

CORENCO

FOR ANIMAL PRODUCTS—NAMELY, FERTILIZERS AND AGRICULTURAL CHEMICALS.
Claims use since about July 1920.

Reg. No. 308,542. Registered Dec. 5, 1933. PACIFIC BONE COAL & FERTILIZING COMPANY, San Francisco, Calif. Republished by Consolidated Chemical Industries, Inc., San Francisco, Calif., a corporation of Delaware.

CALA-BONE

The word "Bone" is disclaimed apart from the mark as shown.
FOR STEAMED BONE MEAL AND GROUND STEAM BONE.
Claims use since Apr. 8, 1933.

CLASS 11

INKS AND INKING MATERIALS

Reg. No. 98,773. Registered Aug. 4, 1914. B. HELLER & CO., Chicago, Ill. Republished by B. Heller & Company, Chicago, Ill., a corporation of Illinois.

ZANZIBAR CARBON INDELIBLE INK

The words "Indelible Ink" are disclaimed apart from the mark as shown.
FOR INKS FOR WRITING, PRINTING, AND STAMPING PURPOSES AND THINNERS THEREFOR.
Claims use since December 1894.

Reg. No. 222,708. Registered Jan. 4, 1927. OFFICE SPECIALTIES CO., Los Angeles, Calif. Republished by Office Specialties Co. (1937), Los Angeles, Calif., a copartnership.

SIMPLEX

FOR INK PADS, RUBBER-STAMP INK, AND NUMBERING MACHINE INK.
Claims use since Jan. 2, 1925.

CLASS 12

CONSTRUCTION MATERIALS

Reg. No. 120,619. Registered Feb. 19, 1918. THE NEWPORT ROLLING MILL COMPANY, Newport, Ky. Republished by International Detroit Corporation, Detroit, Mich., a corporation of Indiana.

GLOBE

FOR BUILDING MATERIAL OF GALVANIZED STEEL SHEETS, BLACK STEEL SHEETS, PAINTED STEEL SHEETS, AS FOLLOWS, TO WIT, CORRUGATED RIDGE-ROLLS, CORRUGATED SIDE-WALL FLASHINGS, CORRUGATED END-WALL FLASHINGS, CORRUGATED AWNING-SHEETS, CORRUGATED ARCHES AND CURVED SHEETS FOR USE IN ARCHED CONSTRUCTION, CORRUGATED SHEETS WITH V-CRIMP EDGES; CORRUGATED PRESSED STANDING-SEAM ROOFING; V-CRIMP ROOFING; MIDDLE OR 3-V-CRIMP ROOFING, 4-V-CRIMP ROOFING, 5-V-CRIMP ROOFING, 6-V-CRIMP ROOFING, PRESSED STANDING-SEAM ROOFING, PRESSED STANDING-SEAM ROOFING WITH CENTER CRIMP, BEADED V-CRIMP ROOFING, BEADED PRESSED STANDING-SEAM ROOFING, CORNER-MOLDING, STEEL CEILINGS AND SIDE-WALL SHEETS OF ORNAMENTAL DESIGN, CORNICE-STRIPS, WEATHER-BOARD-SIDING, METAL CORNER-BOARDS, PANEL-

Claims use since Apr. 13, 1891.

Reg. No. 137,334. Registered Nov. 23, 1920. METAL FORMS CORPORATION, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

METAFORMS

FOR CONCRETE FORMS AND SHAPING DEVICES.
Claims use since Feb. 1, 1919.

Reg. No. 284,061. Registered June 16, 1931. GEO. H. STORM & CO., INC., New York, N. Y., assignor to Raymond W. Storm. Republished by Storm Flooring Co. Incorporated, New York, N. Y., a corporation of New York.

CUSHION

FOR WOODEN FLOORING.
Claims use since Nov. 10, 1930.

Reg. No. 296,816. Registered Aug. 23, 1932. SOUTH WESTERN STONE CO., LTD., London, England, a corporation of Great Britain. Republished by registrant.

PERRYCOT

FOR POLISHED STONE FOR BUILDING OR DECORATION.
Claims use since Dec. 14, 1931.

Reg. No. 306,728. Registered Sept. 26, 1933. HARRY T. CAMPBELL SONS COMPANY, Towson, Md. Republished by Harry T. Campbell Sons' Corporation, Towson, Md., a corporation of Maryland.

Camelite
A PAVEMENT FOR PERMANENCE

The words "A Pavement for Permanence" are disclaimed apart from the mark as shown.
FOR BUILDING STONE, ASPHALTIC CONCRETE, AND SO-CALLED HOT AND COLD MIX ASPHALTIC CONCRETE FOR CONSTRUCTION OF SURFACES AND BEDS FOR ROADS AND STREETS.
Claims use since Nov. 1, 1932.

Reg. No. 309,311. Registered Jan. 9, 1934. RAYMOND W. STORM, doing business as Storm Flooring Company, New York, N. Y. Republished by Storm Flooring Co. Incorporated, New York, N. Y., a corporation of New York.

CORKUSHION

FOR FLOOR MASTIC.
Claims use since Nov. 25, 1932.

Reg. No. 352,778. Registered Dec. 14, 1937. REPUBLIC STEEL CORPORATION, Cleveland, Ohio, a corporation of New Jersey. Republished by registrant.

REPUBLIC
STEEL

The word "Steel" is disclaimed apart from the mark as shown.
FOR HIGHWAY AND ROAD GUARDS AND PARTS THEREOF, AND STRUCTURAL STEEL SECTIONS OF VARIOUS CROSS-SECTIONAL SHAPES.
Claims use since Mar. 24, 1936.

Reg. No. 411,193. Registered Jan. 9, 1945. LITH-I-BAR COMPANY, Holland, Mich., a corporation of Michigan. Republished by registrant.

LITH-I-BAR

The word "Bar" is disclaimed apart from the mark as shown.
FOR PREFABRICATED LIGHTWEIGHT REINFORCED CONCRETE STRUCTURAL FRAMING MEMBERS.
Claims use since January 1933.

Reg. No. 440,117. Registered Aug. 10, 1948. THE PERMA PRODUCTS COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

Shakertown

FOR WOODEN SIDEWALL MATERIAL FOR RESIDENTIAL AND OTHER BUILDINGS, THE SIDEWALL MATERIAL BEING IN SHEET, BOARD, OR PANEL FORM FOR EXTERIOR COVERING PURPOSES.
Claims use since Feb. 15, 1941.

Reg. No. 440,882. Registered Oct. 5, 1948. RY-LOCK COMPANY, LTD., San Leandro, Calif., a corporation of California. Republished by registrant.

RY-LOCK

The word "Lock" is disclaimed apart from the mark as shown.
FOR WINDOW SCREENS.
Claims use since on or before Jan. 1, 1946.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 111,155. Registered July 4, 1916. AMERICAN DISTRICT STEAM COMPANY, North Tonawanda, N. Y., a corporation of New York. Republished by registrant.

AOSCO

FOR BOILERS, COOLING AND HEATING COILS, EXPANSION-VALVES FOR RADIATORS AND STEAM-TRAPS, RADIATORS, RADIATOR-VALVES, STEAM-TRAPS FOR STEAM-PRESSURE USAGE, STEAM-SEPARATORS, VARIATORS FOR PROVIDING FOR EXPANSION AND CONTRACTION OF PIPES, STEAM WATER-HEATERS, DAMPER-REGULATORS, STEAM-ACTUATED TEMPERATURE-REGULATORS AND FITTINGS FOR STEAM-HEATING SYSTEMS, ADJUSTABLE ANNULAR STEAM-PIPE WEDGES, ANCHORAGE AND ANCHOR SPECIALS TO HOLD STEAM PIPES AND FITTINGS AGAINST EXPANSION BY HEAT, STEAM-JOINT CLAMPS, PIPE-GUIDES FOR CENTERING PIPES IN CASINGS OF UNDERGROUND STEAM-MAINS, SLOTTED ANGLE-FLANGES, SLEEVES AND STRAINERS ESPECIALLY CONSTRUCTED FOR HEAVY-PRESSURE AND UNDERGROUND STEAM SYSTEMS, HOT WATER-STORAGE TANKS, FOOT-VALVE STRAINERS FOR STEAM SYSTEMS, TUNNEL-FITTINGS, T's AND UNIONS SPECIALLY CONSTRUCTED FOR UNDERGROUND STEAM-MAINS, VALVE-CURBS AND VALVE-SHIELDS FOR UNDERGROUND STEAM-MAINS, SPECIALLY-CONSTRUCTED UNIONS AND UNION-ELBOWS, ANGLE-VALVES, GLOBE-VALVES, REDUCING-VALVES AND CONTROLLING-VALVES FOR USE IN CONNECTION WITH RADIATORS, BACK-PRESSURE VALVES FOR STEAM SYSTEMS, SPECIALLY-CONSTRUCTED HEAVY-PRESSURE GATE STEAM-VALVES; STEAM-PRESSURE REDUCING, REGULATING, RELIEF, AND SAFETY VALVES; PIPE-RECEIVERS FOR STEAM-HEATING SYSTEMS; SPECIALLY-CONSTRUCTED AND PRESSURE-TESTED BALL-JOINTS, BUSHINGS, BRANCH FITTINGS, COMPANION FLANGES, COUPLINGS, CROSSES, ELBOWS, COLLARS, ECCENTRIC FITTINGS, LATERALS, NIPPLES, UNIONS, PIPE, REDUCERS, PIPE-BENDS, PIPE-FITTINGS, BOTH FLANGED AND THREADED, CAST-IRON AND MALLEABLE, AND SPECIALLY ADAPTED FOR USE WITH HEAVY-PRESSURE AND UNDERGROUND STEAM-SERVICE, AND ECONOMY-COILS FOR REMOVING HEAT FROM THE WATER OF CONDENSATION IN STEAM-HEATING SYSTEMS.
Claims use since about April 1910.

Reg. No. 130,585. Registered Apr. 27, 1920. THE TOLEDO COOKER COMPANY, Toledo, Ohio. Republished by The Swartzbaugh Manufacturing Company, Toledo, Ohio, a corporation of Ohio.

CONSERVO

FOR STEAM COOKERS.
Claims use since Feb. 8, 1918.

Reg. No. 222,800. Registered Jan. 11, 1927. LINK-BELT COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

C

FOR COMPOSITE TRANSMISSION AND CONVEYER CHAINS FORMED IN PART OF IRON AND IN PART OF STEEL LINKS.
Claims use since about Jan. 1, 1907.

Reg. No. 263,476. Registered Nov. 5, 1929. B. ALTMAN & CO., New York, N. Y., a corporation of New York. Republished by registrant.

B. Altman & Co.

FOR JEWELRY FOR PERSONAL WEAR AND DRESS WEAR NOT INCLUDING WATCHES; SILVER TABLEWARE AS FOLLOWS: KNIVES, FORKS, SPOONS, LADLES, SERVERS, TONGS, TEA AND COFFEE SETS, WATER PITCHERS, WATER GOBLETS, SHERBET GLASSES, BEVERAGE GLASSES, BERRY, SALAD, AND MAYONNAISE BOWLS, BREAD AND SERVING TRAYS, SANDWICH, SERVICE AND BREAD AND BUTTER PLATES, BON-BON DISHES, FLOWER VASES, FLOWER BASKETS, FLOWER CENTERPIECES, CANDLESTICKS, NAPKIN RINGS, TEA STRAINERS, SALT AND PEPPER SHAKERS, BEVERAGE SHAKERS, MEAT PLATTERS, GRAVY BOATS AND TRAYS, SUGAR AND CREAM SETS, VEGETABLE DISHES, CHOP DISHES, COMPOTIERS, EGG CUPS, TABLE BELLS, TEA BALLS, BABY CUPS, BOWLS AND PLATES; SILVER TOILET WARE AS FOLLOWS: MIRRORS, BRUSHES, COMBS, POWDER JARS, SALVE JARS, PERFUME BOTTLES, TRAYS, SHOEHORNS, BUTTON HOOKS, NAIL FILES, SCISSORS, PICTURE FRAMES, NAIL POLISHERS, AND HAIR RECEIVERS; STERLING SILVER NOVELTIES AS FOLLOWS: CIGAR AND CIGARETTE CASES, CIGARETTE BOXES, CIGARETTE HOLDERS, MATCH BOXES, POCKET FLASKS, ASH TRAYS, POCKETKNIVES, KEY RINGS, BILL CLIPS, POCKET COMBS, POCKET MIRRORS, POWDER CASES, AND PERFUME FLASKS.
Claims use since about 1889.

Reg. No. 319,363. Registered Nov. 20, 1934. LINK-BELT COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

red·hed

FOR POWER CHAINS AND CHAIN LINKS.
Claims use since about Mar. 14, 1934.

Reg. No. 352,376. Registered Nov. 30, 1937. REPUBLIC STEEL CORPORATION, Cleveland, Ohio, a corporation of New Jersey. Republished by registrant.

REPUBLIC STEEL

The word "Steel" is disclaimed apart from the mark as shown.

FOR LAP WELDED, BUTT WELDED, AND ELECTRIC WELDED PIPE, CASING, AND TUBING OF VARIOUS CROSS-SECTIONAL SHAPES; METAL CULVERTS AND DRAINAGE PIPE; BOLTS, NUTS, RIVETS, SPIKES, SCREW SPIKES, SCREWS AND TURNBUCKLES; BALE TIES, WOVEN WIRE FENCING, POULTRY NETTING, BARBED WIRE; METAL FENCE POSTS, WIRE NAILS, FENCE STAPLES, WIRE ROPE CLIPS, AND METAL GATES.

Claims use since Mar. 24, 1936.

Reg. No. 394,874. Registered May 5, 1942. HUBBARD AND COMPANY, Emeryville, Calif., a corporation of Pennsylvania. Republished by registrant, present address Pittsburgh, Pa.

DRIVEPOINT

FOR POLE LINE HARDWARE—NAMELY, UPSWEEP STREET HOOD BRACKETS, TELEPHONE POLE TOP BRACKETS, CLEVISES, LAMP LEAD BRACKETS, RIDGE IRONS, ONE AND TWO BOLT GUY CLAMPS, TRANSFORMER KICK-IRON BRACKETS, POLE GAINS, GUY GUARDS AND PROTECTION STRIPS, STRAIN PLATES, GUY SHIMS, GUY AND LOAD PLATES, THREE TO ONE GUY ADAPTERS, MESSENGER DEAD ENDS, LOAD PLATES, BREAST PLATES, POLE REENFORCING BANDS, POLE STRUTS, SIDEWALK GUY ARMS, SIDEWALK GUY ARM FITTINGS, ANGLE CROSS ARM BRACES, FLAT CROSS ARM BRACES, ALLEY ARM BRACES, VERTICAL BRACES, CROSS ARM BACK BRACES, HIGHWAY CROSS OVER BRACKET, CABLE EXTENSION ARMS, CABLE RINGS, TRUSS ARMS, STREET HOOD BRACKETS, MAST ARMS, SCROLLS, GROUND ROD CLAMPS, NUTS, FLAT, SPRING, ROUND CUSHION, SPRING LOCK, AND SQUARE WASHERS, POLE BANDS, CABLE SUSPENSION CLAMPS, POLE SEATS, CABLE RACKS, CABLE RACK EXTENSIONS, CABLE DUCT SHIELDS, CROSS ARM SADDLES, CROSS ARM REENFORCING PLATES, THIMBLES, THIMBLE ADAPTERS, CENTERING WASHERS, TRIANGLE ARMS, POLE TOP FIXTURES, BO-ARROW ARMS, DOUBLE ARMING SETS, WISHBONE ARMS, TRUSS ARM FITTINGS FOR WISHBONE STRUCTURES, HORN GAPS, STRAIN YOKES, SECONDARY POLE PLATES, PIPES, BUSHINGS, REDUCERS, POLE PULLEYS.

Claims use since Feb. 6, 1940.

Reg. No. 401,966. Registered June 22, 1943. CALUMET AND HECLA CONSOLIDATED COPPER COMPANY, Boston, Mass., a corporation of Michigan. Republished by registrant, present address Calumet, Mich.

BRASS TUBE COPPER

No claim is made to the words "Brass," "Copper," and "Tube," or to the representation of the goods, apart from the mark as shown.

FOR METAL TUBING, PLAIN AND FORMED.

Claims use since about July 1, 1939.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Reg. No. 107,210. Registered Nov. 16, 1915. THE STARK ROLLING MILL COMPANY, Canton, Ohio. Republished by Republic Steel Corporation, Cleveland, Ohio, a corporation of New Jersey.

TONCAN

FOR RUST-RESISTING ANTI-CORROSIVE METAL.

Claims use since Dec. 1, 1908.

Reg. No. 129,232. Registered Jan. 27, 1920. UNITED AMERICAN METALS CORPORATION, Brooklyn, N. Y., a corporation of New York. Republished by registrant.

AMERICAN MARINE

FOR BABBITT METAL.

Claims use since Mar. 17, 1919.

Reg. No. 134,454. Registered Aug. 31, 1920. UNITED AMERICAN METALS CORPORATION, Brooklyn, N. Y., a corporation of New York. Republished by registrant.

SYRACUSE

FOR NON-FERROUS ALLOYS.

Claims use since about 1890.

Reg. No. 139,643. Registered Feb. 8, 1921. SYRACUSE SMELTING WORKS, Brooklyn, N. Y., a corporation of New York. Republished by registrant.

The representation of the goods is disclaimed apart from the mark as shown.

FOR BABBITT METAL.

Claims use since 1908.

Reg. No. 150,560. Registered Sept. 26, 1922. UNITED ALLOY STEEL CORPORATION, New York, N. Y., and Canton, Ohio. Republished by Republic Steel Corporation, Cleveland, Ohio, a corporation of New Jersey.

ULOY

FOR STEEL, ALLOY STEEL, AND IRON AND STEEL BARS, AND SHEET BARS.

Claims use since October 1921.

Reg. No. 211,281. Registered Apr. 8, 1926. UNITED ALLOY STEEL CORPORATION, New York, N. Y., and Canton, Ohio. Republished by Republic Steel Corporation, Cleveland, Ohio, a corporation of New Jersey.

ENDURO

FOR RUST-RESISTING ANTI-CORROSIVE METAL AND IRON AND STEEL BARS, SLABS, BILLETS, SHEETS, AND STRIPS.

Claims use since July 15, 1908.

Reg. No. 222,064. Registered Dec. 21, 1926. UNITED ALLOY STEEL CORPORATION, New York, N. Y., and Canton, Ohio, now Central Alloy Steel Corporation. Republished by Republic Steel Corporation, Cleveland, Ohio, a corporation of New Jersey.

ENDURO

FOR RUST-RESISTING, ANTI-CORROSIVE METAL AND IRON AND STEEL BARS, SLABS, BILLETS, SHEETS, AND STRIPS.

Claims use since Sept. 1, 1925.

Reg. No. 248,922. Registered Nov. 6, 1928. LINK-BELT COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

>PROMAL<

FOR HEAT-TREATED FERROUS METALS.

Claims use since about May 1927.

Reg. No. 347,216. Registered June 22, 1937. INTERLAKE IRON CORPORATION, Chicago, Ill., a corporation of New York. Republished by registrant, present address Cleveland, Ohio.

MELTRITE

The drawing is lined for red.

FOR PIG IRON, IN THE FORM OF PIGS.

Claims use since Sept. 13, 1935.

Reg. No. 352,377. Registered Nov. 30, 1937. REPUBLIC STEEL CORPORATION, Cleveland, Ohio, a corporation of New Jersey. Republished by registrant.

REPUBLIC STEEL

The word "Steel" is disclaimed apart from the mark as shown.

FOR BESSEMER, OPEN HEARTH AND ELECTRIC FURNACE CARBON, ALLOY AND STAINLESS FERROUS METAL INGOTS, BLOOMS, BILLETS, AND SLABS; HOT AND COLD DRAWN AND HOT AND COLD ROLLED CARBON, ALLOY AND STAINLESS FERROUS BARS AND RODS OF VARIOUS CROSS-SECTIONAL SHAPES; HOT AND COLD ROLLED CARBON, ALLOY, STAINLESS, SILICON AND ELECTRICAL STRIP STEEL, STEEL SHEETS AND STEEL PLATES; RUST-RESISTANT AND NON-CORROSIVE FERROUS METALS IN THE FORM OF INGOTS, BLOOMS, BILLETS, SLABS, SHEETS, STRIPS, PLATES, BARS; DIE ROLLED BLANKS; RAILROAD-TRACK EQUIPMENT—NAMELY, TIE PLATES, TIE RODS, RAIL JOINT PLATES, AND GUARD RAILS; IRON WIRE, SPRING WIRE, COPPERED WIRE, GALVANIZED WIRE, STAINLESS WIRE, ANNEALED WIRE, AND DRAWN WIRE; PIG IRON; TIN PLATE; AND WELDING ROD.

Claims use since Mar. 24, 1936.

CLASS 15

OILS AND GREASES

Reg. No. 413,827. Registered May 15, 1945. SHELL OIL COMPANY, INCORPORATED, San Francisco, Calif., a corporation of Virginia. Republished by registrant.

ENSIS COMPOUND

The word "Compound" is disclaimed apart from the mark as shown.
FOR RUST AND CORROSION PREVENTIVE OILS.
Claims use since Mar. 27, 1944.

Reg. No. 415,056. Registered July 10, 1945. PANEF MANUFACTURING CO., Milwaukee, Wis. Republished by Panef Manufacturing Co., Inc., Milwaukee, Wis., a corporation of Wisconsin.

Lub-a-Spray

The word "Spray" is disclaimed apart from the mark as shown.
FOR POWDERED LUBRICANTS.
Claims use since Nov. 30, 1944.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 85,442. Registered Feb. 20, 1912. HOLZAPFELS LIMITED, Newcastle-upon-Tyne, England. Republished by International Paint Company, Inc., New York, N. Y., a corporation of New York.

HOLZAPFEL

FOR ANTI-CORROSIVE AND ANTI-FOULING PAINT, MIXED PAINT, AND ENAMEL PAINTS.
Claims use since May 1880.

Reg. No. 258,625. Registered July 0, 1929. HARRY E. STONE, doing business as American Lacquer Solvents Co., Norristown, Pa. Republished by American Lacquer Solvents Company, Phoenixville, Pa., a corporation of Pennsylvania.

SUPERSOL

FOR LACQUER SOLVENT.
Claims use since Sept. 10, 1928.

Reg. No. 262,661. Registered Oct. 22, 1929. GREAT LAKES VARNISH WORKS, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

GRANITEX

FOR PLASTIC PAINT.
Claims use since Mar. 20, 1929.

Reg. No. 295,062. Registered June 14, 1932. THE GRASON-STEWART CORPORATION, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

Swift-On

FOR FLOOR, WOODWORK, AND FURNITURE POLISHES OF A LIQUID OR SEMI-LIQUID MATERIAL.
Claims use since July 1931.

Reg. No. 377,368. Registered Apr. 30, 1940. SHELL CHEMICAL COMPANY, San Francisco, Calif. Republished by Shell Chemical Corporation, New York, N. Y., a corporation of Delaware.

NEOSOL

FOR LACQUER THINNER, LACQUER SOLVENT, PAINT THINNER, AND PAINT SOLVENT.
Claims use since Nov. 13, 1939.

CLASS 17

TOBACCO PRODUCTS

Reg. No. 71,941. Registered Dec. 22, 1908. GODFREY S. MAHN, New York, N. Y. Republished by Philip Morris & Co. Ltd. Incorporated, New York, N. Y., a corporation of Virginia.

BARKING DOG

SMOKING TOBACCO

NEVER BITES

FOR SMOKING TOBACCO.
Claims use since July 9, 1908.

Reg. No. 261,109. Registered Sept. 3, 1929. YAHN & MCDONNELL, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

MARCELLO

FOR CIGARS, CIGARROS, AND SMOKING TOBACCO.
Claims use since 1883.

CLASS 19

VEHICLES

Reg. No. 365,585. Registered Mar. 14, 1939. FORD MOTOR COMPANY, Dearborn, Mich., a corporation of Delaware. Republished by registrant.

MERCURY

FOR PASSENGER AND COMMERCIAL AUTOMOBILES.
Claims use since Aug. 1, 1938.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 89,945. Registered Jan. 21, 1913. OZONAIR LIMITED, Westminster, London, England, a corporation organized under the laws of Great Britain. Republished by registrant, present address London, England.

OZONAIR

FOR ELECTRICAL APPARATUS FOR PRODUCING AND UTILIZING ELECTPIC DISCHARGES, CONSISTING OF DYNAMO-ELECTRIC MACHINES, ELECTRIC-CURRENT CONVERTERS, ELECTRIC-CURRENT TRANSFORMERS, ELECTRIC ACCUMULATORS.
Claims use since 1905.

Reg. No. 156,652. Registered July 11, 1922. J. A. CRABTREE & CO. LIMITED, Birmingham, England, a limited company of Great Britain. Republished by registrant, present address Walsall, England.

CRAB

FOR ELECTRICAL SWITCH BOARDS, FLAT SWITCHES, FLUSH SWITCHES, BASE RINGS, SWITCH PLATE RINGS, AND INSULATORS OF PORCELAIN, AND EARTHENWARE INSULATORS.
Claims use since Apr. 17, 1919.

Reg. No. 185,662. Registered June 24, 1924. ALLEN-BRADLEY COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

A-B
Allen-Bradley

FOR COMPLETE AND INCOMPLETE BATTERY-CHARGING APPARATUS, ELECTRICAL CONTROL APPARATUS, ELECTRICAL INSTRUMENTS FOR VARYING THE POTENTIAL OF ELECTRIC CURRENTS, AND SWITCHES, GRID LEAKS, POTENTIOMETERS, CONDENSERS, AND RHEOSTATS FOR USE IN CONNECTION WITH WIRELESS APPARATUS.
Claims use since Oct. 1, 1923.

Reg. No. 195,724. Registered Mar. 3, 1925. LEO WISE, Cincinnati, Ohio. Republished by Leo's Stores, Inc., Cincinnati, Ohio, a corporation of Ohio.

LEO'S
HOLE in the WALL

FOR ELECTRICAL APPARATUS FOR AUTOMOBILES AND LIKE VEHICLES—NAMELY, ELECTRIC HEADLIGHTS, ELECTRIC LAMPS, BULBS, AND TORCHES, SPARK PLUGS, STORAGE BATTERIES, SWITCHES, BINDING POSTS, AND ELECTRIC LIGHTING AND MOTIVE SYSTEMS USED IN AUTOMOBILES AND LIKE VEHICLES.
Claims use since Nov. 18, 1920.

Reg. No. 276,768. Registered Oct. 28, 1930. THE FEDERAL GAUGE COMPANY, Chicago, Ill. Republished by The Mercoid Corporation, Chicago, Ill., a corporation of Delaware.

The words "Used the World Over" and "Control" are disclaimed apart from the mark as shown.
FOR ELECTRIC CONTROLS FOR ELECTRIC SWITCHES, TEMPERATURE-OPERATED ELECTRIC SWITCHES, PRESSURE-OPERATED ELECTRIC SWITCHES, AND PARTS THEREOF.
Claims use since on or about Mar. 5, 1930.

Reg. No. 403,020. Registered Aug. 31, 1943. GENERAL ELECTRIC COMPANY, Schenectady, N. Y., a corporation of New York. Republished by registrant.

THERMOCELL

FOR QUARTZ CRYSTAL ELECTRIC OSCILLATORS.
Claims use since about Dec. 18, 1936.

Reg. No. 411,608. Registered Jan. 23, 1945. PIONEER GEN-E-MOTOR CORPORATION, Chicago, Ill., a corporation of Delaware. Republished by registrant.

BLUE DIAMOND

FOR GENERATORS, ELECTRIC MOTORS, DYNAMOTORS, INVERTED ROTARY CONVERTERS, MOTOR GENERATORS, GAS ENGINE DRIVEN ELECTRIC GENERATING PLANTS, WIND DRIVEN ELECTRIC GENERATING AND BATTERY CHARGING PLANTS, BATTERY CHARGING PLANTS AND ELECTRIC POWER PLANTS.
Claims use since July 1936.

Reg. No. 411,609. Registered Jan. 23, 1945. PIONEER GEN-E-MOTOR CORPORATION, Chicago, Ill., a corporation of Delaware. Republished by registrant.

GOLD CROWN

FOR GENERATORS, ELECTRIC MOTORS, DYNAMOTORS, INVERTED ROTARY CONVERTERS, MOTOR GENERATORS, GAS ENGINE DRIVEN ELECTRIC GENERATING PLANTS, WIND DRIVEN ELECTRIC GENERATING AND BATTERY CHARGING PLANTS, BATTERY CHARGING PLANTS AND ELECTRIC POWER PLANTS.

Claims use since December 1936.

Reg. No. 432,065. Registered Aug. 19, 1947. ALLEN-BRADLEY COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

A-B

FOR APPARATUS FOR THE CONTROL OF ELECTRIC ENERGY AS USED IN INDUSTRY COMPRISING: SWITCHES, MANUAL AND AUTOMATIC; RESISTORS, FIXED AND VARIABLE TRANSFORMERS; MECHANICAL TIMING DEVICES OF THE SYNCHRONOUS MOTOR DRIVEN TYPE FOR CONTROLLING ELECTRIC MOTORS; AND PILOT CONTROL DEVICES OF THE MECHANICALLY OPERATED SWITCH TYPE FOR USE IN ELECTRIC MOTOR CONTROLLING EQUIPMENT.

Claims use since on or about June 28, 1925.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 343,782. Registered Mar. 2, 1937. SELCHOW & RIGHTER COMPANY, New York, N. Y. Republished by Selchow & Righter Company (1939), New York, N. Y., a corporation of New York.

CARGOES

FOR BOARD GAMES PLAYED WITH CARDS AND DICE.

Claims use since September 1935.

Reg. No. 439,437. Registered June 29, 1948. MAT MACGARGOR, New York, N. Y. Republished by registrant.

BEAUTY BOARD

The word "Board" is disclaimed apart from the mark as shown.

FOR SUPPORTING BOARD ADAPTED FOR USE IN EXERCISE OF THE HUMAN BODY.

Claims use since Jan. 2, 1942.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 137,790. Registered Dec. 7, 1920. GUARANTEE CONSTRUCTION COMPANY, New York, N. Y. Republished by Fuller Company, Catasauqua, Pa., a corporation of Delaware.

AIRVEYOR

FOR CONVEYERS FOR CONVEYING AND HANDLING MATERIALS.

Claims use since on or about Nov. 1, 1919.

Reg. No. 156,186. Registered June 20, 1922. BUSH, MIZE & SILLIMAN HARDWARE CO., Atchison, Kans., a corporation of Kansas. Republished by registrant.

BUSH MIZE & SILLIMAN HARDWARE CO. ATCHISON, KAN. U.S.A. "HAWK"

No claim is made to the exclusive use of the geographical term "Atchison, Kan.," apart from the mark as shown.

FOR SAWS, WOOD-SAW BLADES, AXES, HATCHETS, HAMMERS, BUTCHER KNIVES, GRAIN CORN KNIVES, RAZORS, SCYTHES, BITS, AUGERS, BIT BRACES, SCREW DRIVERS, WRENCHES, LAWN MOWERS, HOES, RAKES, SHOVELS, SCOOPS, SPADES, HAY FORKS, MANURE FORKS, AXE HANDLES, AND FORK HANDLES.

Claims use since Jan. 30, 1898.

Reg. No. 263,476. Registered Nov. 5, 1929. B. ALTMAN & CO., New York, N. Y., a corporation of New York. Republished by registrant.

B. Altman & Co.

FOR JEWELRY FOR PERSONAL WEAR AND DRESS WEAR NOT INCLUDING WATCHES; SILVER TABLEWARE AS FOLLOWS: KNIVES, FORKS, SPOONS, LADLES, SERVERS, TONGS, TEA AND COFFEE SETS, WATER PITCHERS, WATER GOBLETS, SHERBET GLASSES, BEVERAGE GLASSES, BERRY, SALAD, AND MAYONNAISE BOWLS, BREAD AND SERVING TRAYS, SANDWICH, SERVICE AND BREAD AND BUTTER PLATES, BON-BON DISHES, FLOWER VASES, FLOWER BASKETS, FLOWER CENTERPIECES, CANDLESTICKS, NAPKIN RINGS, TEA STRAINERS, SALT AND PEPPER SHAKERS, BEVERAGE SHAKERS, MEAT PLATTERS, GRAVY BOATS AND TRAYS, SUGAR AND CREAM SETS, VEGETABLE DISHES, CHOP DISHES, COMPOTIERS, EGG CUPS, TABLE BELLS, TEA BALLS, BABY CUPS, BOWLS AND PLATES; SILVER TOILET WARE AS FOLLOWS: MIRRORS, BRUSHES, COMBS, POWDER JARS, SALVE JARS, PERFUME BOTTLES, TRAYS, SHOEHORNS, BUTTON HOOKS, NAIL FILES, SCISSORS, PICTURE FRAMES, NAIL POLISHERS, AND HAIR RECEIVERS; STERLING SILVER NOVELTIES AS FOLLOWS: CIGAR AND CIGARETTE CASES, CIGARETTE BOXES, CIGARETTE HOLDERS, MATCH BOXES, POCKET FLASKS, ASH TRAYS, POCKETKNIVES, KEY RINGS, BILL CLIPS, POCKET COMBS, POCKET MIRRORS, POWDER CASES, AND PERFUME FLASKS.

Claims use since about 1889.

Reg. No. 256,793. Registered Sept. 1, 1931. LINK-BELT COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

STRAIGHTLINE

FOR SEWAGE AND WATER SCREENS, PARTS AND ACCESSORIES, ACTIVATED SLUDGE PLANTS, SETTLING TANKS, SLUDGE GRIT AND SCUM COLLECTORS, SKIMMING TANKS, GRIT CHAMBERS AND GRIT WASHERS, AEREATORS, DRIVING AND CONTROLLING AND MECHANICAL ACCESSORIES EXCLUSIVE OF ELECTRIC MOTORS THEREFOR.

Claims use since about Dec. 1, 1929.

Reg. No. 378,284. Registered June 4, 1940. THE CARLYLE JOHNSON MACHINE COMPANY, Manchester, Conn., a corporation of Ohio. Republished by registrant.

MAXITORQ

FOR CLUTCHES FOR TRANSMITTING POWER FROM ONE MECHANISM TO ANOTHER.

Claims use since Nov. 11, 1939.

Reg. No. 403,821. Registered Oct. 19, 1943. THE UNITED SPECIALTIES COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

USC

FOR AIR CLEANERS AND DUST SEPARATORS IN ASSOCIATION WITH INTERNAL COMBUSTION ENGINES.

Claims use since June 1935.

Reg. No. 431,227. Registered July 15, 1947. GUSTIN-BACON MANUFACTURING COMPANY, Kansas City, Mo., a corporation of Missouri. Republished by registrant.

EXPAN-SEAL

The term "Seal" is disclaimed apart from the mark as shown.

FOR OIL WELL PUMP PLUNGERS.

Claims use since June 11, 1946.

Reg. No. 435,455. Registered Dec. 30, 1947. PARK CHEMICAL COMPANY, Detroit, Mich., a corporation of Michigan. Republished by registrant.

Parko

The drawing is lined for red.

FOR METAL PARTS CLEANING MACHINE.

Claims use since October 1945.

Reg. No. 439,383. Registered June 22, 1948. CIRCO PRODUCTS COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

CIRCO CADET

FOR DEGREASERS—I. E., APPARATUS FOR CIRCULATING A SOLVENT AND/OR SOLVENT VAPOR OVER GREASE LADEN ARTICLES, AND MECHANISM FOR THE RECOVERY OF THE SOLVENT SO USED.

Claims use since Oct. 22, 1946.

Reg. No. 439,737. Registered July 20, 1948. LEWIS-SHEPARD PRODUCTS, INC., Watertown, Mass., a corporation of Delaware. Republished by registrant.

FOR MATERIALS-HANDLING EQUIPMENT ACTUATED HORIZONTALLY OR FOR LIFTING PURPOSES MANUALLY OR BY OR WITH THE AID OF MOUNTED POWER UNITS (INCLUDING MECHANICAL OR HYDRAULIC EQUIPMENT, GASOLINE ENGINES, ELECTRIC MOTORS, OR COMBINATION GASOLINE ENGINE-ELECTRIC GENERATOR UNITS)—NAMELY, LIFT TRUCKS, LIFTING DOLLIES, LIFTING FORK TRUCKS, LIFTING FORK AND TILT TRUCKS, LIFTING INDUSTRIAL POWER TRUCKS, LIFTERS, STACKERS, PORTABLE ELEVATORS AND DUMBWAITERS, PORTABLE CRANES, AUXILIARY CRANES, HOISTS, PILING MACHINES, AND TIERING MACHINES, TOGETHER WITH ACCESSORIES THERETO AND PARTS THEREFOR—NAMELY, CHAIN CONTROLS, TURNTABLES, CANTILEVER JACKS, WINCHES, HIGH-SPEED DRIVES, HINGES FOR HIGH-STACKING MACHINES, LADDERS FOR PERMANENT ATTACHMENT TO HIGH-STACKING MACHINES, HYDRAULIC RELEASES, SPRING BALANCE CYLINDERS, BROKEN CABLE SAFETY DEVICES, ROLLERS, CASTERS, FRAME SPLICES, CABLE CONTROL FLOOR STOPS, PLATFORM RETAINING BARS FOR STACKING MACHINES, DETACHABLE SKIDS, BARREL ROLLS, REMOVABLE ROLLERS, ROLLER PLATFORMS.

Claims use since June 1, 1944.

CLASS 27

FRAMES, NAIL POLISHERS, AND HAIR RECEIVERS; STERLING SILVER NOVELTIES AS FOLLOWS: CI-

CLASS 31

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Reg. No. 152,674. Registered Mar. 7, 1922. THE ATLANTIC STAMPING COMPANY, Rochester, N. Y., a corporation of New York. Republished by registrant.

ATLANTIC

FOR WASHTUBS AND WASH BOILERS.
Claims use since about Mar. 1, 1904.

CLASS 25

LOCKS AND SAFES

Reg. No. 218,153. Registered Sept. 21, 1926. MASTER LOCK COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

FOR PADLOCKS, HASP LOCKS, AND DOOR GUARDS AND DOOR BOLTS.
Claims use since Sept. 1, 1923.

Reg. No. 230,811. Registered July 19, 1927. MASTER LOCK COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

MASTER

FOR LOCKS.
Claims use since about Sept. 1, 1922.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Reg. No. 129,029. Registered Jan. 20, 1920. MONROE CALCULATING MACHINE COMPANY, Orange, N. J. Republished by Monroe Calculating Machine Company, Orange, N. J., a corporation of Delaware.

MONROE

The drawing is lined to indicate the colors red and yellow.
FOR CALCULATING AND ADDING MACHINES.
Claims use since Mar. 1, 1913.

CLASS 27

HOROLOGICAL INSTRUMENTS

Reg. No. 409,177. Registered Sept. 19, 1944. GEORGE N. WALLACE, New York, N. Y. Republished by registrant.

C. L. Guinand

FOR WATCHES AND PARTS THEREOF.
Claims use since April 1884.

Reg. No. 436,082. Registered Jan. 20, 1948. THE LUX CLOCK MANUFACTURING COMPANY, Waterbury, Conn., a corporation of Connecticut. Republished by registrant.

Harvester

FOR CLOCKS, INCLUDING BOUDOIR, DESK, MANTEL, AND ALARM CLOCKS AND PARTS OF CLOCKS.
Claims use since about Mar. 15, 1939.

Reg. No. 436,083. Registered Jan. 20, 1948. THE LUX CLOCK MANUFACTURING COMPANY, Waterbury, Conn., a corporation of Connecticut. Republished by registrant.

Juliet

FOR CLOCKS, INCLUDING BOUDOIR, DESK, MANTEL, AND ALARM CLOCKS AND PARTS OF CLOCKS.
Claims use since about Dec. 15, 1937.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Reg. No. 263,476. Registered Nov. 5, 1929. B. ALTMAN & CO., New York, N. Y., a corporation of New York. Republished by registrant.

B. Altman & Co.

FOR JEWELRY FOR PERSONAL WEAR AND DRESS WEAR NOT INCLUDING WATCHES; SILVER TABLEWARE AS FOLLOWS: KNIVES, FORKS, SPOONS, LADLES, SERVERS, TONGS, TEA AND COFFEE SETS, WATER PITCHERS, WATER GOBLETS, SHERBET GLASSES, BEVERAGE GLASSES, BERRY, SALAD, AND MAYONNAISE BOWLS, BREAD AND SERVING TRAYS, SANDWICH, SERVICE AND BREAD AND BUTTER PLATES, BON-BON DISHES, FLOWER VASES, FLOWER BASKETS, FLOWER CENTERPIECES, CANDLESTICKS, NAPKIN RINGS, TEA STRAINERS, SALT AND PEPPER SHAKERS, BEVERAGE SHAKERS, MEAT PLATTERS, GRAVY BOATS AND TRAYS, SUGAR AND CREAM SETS, VEGETABLE DISHES, CHOP DISHES, COMPOTIERS, EGG CUPS, TABLE BELLS, TEA BALLS, BABY CUPS, BOWLS AND PLATES; SILVER TOILET WARE AS FOLLOWS: MIRRORS, BRUSHES, COMBS, POWDER JARS, SALVE JARS, PERFUME BOTTLES, TRAYS, SHOEHORNS, BUTTON HOOKS, NAIL FILES, SCISSORS, PICTURE FRAMES, NAIL POLISHERS, AND HAIR RECEIVERS; STERLING SILVER NOVELTIES AS FOLLOWS: CIGAR AND CIGARETTE CASES, CIGARETTE BOXES, CIGARETTE HOLDERS, MATCH BOXES, POCKET FLASKS, ASH TRAYS, POCKETKNIVES, KEY RINGS, BILL CLIPS, POCKET COMBS, POCKET MIRRORS, POWDER CASES, AND PERFUME FLASKS.
Claims use since about 1889.

CLASS 29

BROOMS, BRUSHES, AND DUSTERS

Reg. No. 163,091. Registered Jan. 2, 1923. INDIANAPOLIS BRUSH & BROOM MFG. CO., Indianapolis, Ind., a corporation of Indiana. Republished by registrant.

KONGO

FOR BROOMS.
Claims use since July 1920.

Reg. No. 233,620. Registered Oct. 4, 1927. SYLVAN M. EDISON, doing business as Edison Laboratories, Chicago, Ill. Republished by Miles Laboratories, Inc., Elkhart, Ind., a corporation of Indiana.

Sanident

FOR DENTURE BRUSH.
Claims use since July 15, 1925.

Reg. No. 413,949. Registered May 22, 1945. PALMER COMPANY, INC., Waukesha, Wis., a corporation of Wisconsin. Republished by registrant.

THE *Guardian* LINE

The words "The" and "Line" are disclaimed apart from the mark as shown.
FOR FLOOR BRUSHES; WALL BRUSHES, YARN SWEEPERS IN THE NATURE OF A BROOM HAVING A SWEEPING HEAD MADE OF YARN COBDS; DUSTING BRUSHES; RADIATOR BRUSHES; TOILET AND CUSPIDOR BRUSHES; CLOSET BRUSHES; COUNTER DUSTERS; WHEEL AND SPOKE BRUSHES; WINDOW CLEANING BRUSHES; SCRUB BRUSHES, AND APPLICATORS AND POLISHERS FOR FLOOR TREATMENTS IN THE NATURE OF AN ELONGATED HANDLE HAVING A CLAMP FOR REMOVABLY RECEIVING FELT HEADS FOR APPLYING POLISH TO FLOORS AND FOR SHINING THE FLOORS AFTER THE POLISH HAS BEEN APPLIED.
Claims use since Jan. 1, 1944.

Reg. No. 415,185. Registered July 31, 1945. ADOLPHE DRABKIN, doing business as Le Vant Brush Co., Los Angeles, Calif. Republished by Le Vant Brush Co., Los Angeles, Calif., a corporation of California.

DENT-AID

The syllable "Dent" is disclaimed apart from the mark as shown.
FOR TOOTH-BRUSHES.
Claims use since about Feb. 1, 1938.

CLASS 31

FILTERS AND REFRIGERATORS

Reg. No. 439,454. Registered June 29, 1948. CULLIGAN ZEOLITE COMPANY, Northbrook, Ill., a corporation of Delaware. Republished by registrant.

CULLON

FOR WATER SOFTENING MATERIALS COMPOSED OF RESINOUS AND SYNTHETIC OEL ZEOLITES FOR USE IN WATER CONDITIONING EQUIPMENT.
Claims use since Dec. 1, 1945.

CLASS 32

FURNITURE AND UPHOLSTERY

Reg. No. 301,220. Registered Feb. 21, 1933. ENGLANDER SPRING BED CO., Brooklyn, N. Y. Republished by The Englander Company, Inc., Chicago, Ill., a corporation of Delaware.

VICEROY

FOR MATTRESSES, BOX SPRINGS, AND COIL SPRINGS.
Claims use since July 5, 1932.

Reg. No. 433,865. Registered Nov. 4, 1947. SLEEPMASTER PRODUCTS COMPANY, INC., Newark, N. J., a corporation of New Jersey. Republished by registrant.

FOAMASTER

FOR MATTRESSES, BOX SPRINGS, PILLOWS, STUDIO COUCHES, SOFA BEDS, CUSHIONS FOR SEATS, BACKS, AND ARMS OF FURNITURE, GLIDING COUCH HAMMOCKS, SPONGE RUBBER AND SYNTHETIC RUBBER PRODUCTS USED AS FILLERS FOR THE FINISHED PRODUCTS AFORESAID, UPHOLSTERED ARM CHAIRS AND UPHOLSTERED SOFAS.
Claims use since June 8, 1945.

Reg. No. 438,737. Registered May 11, 1948. QUSTIN-BACON MANUFACTURING COMPANY, Kansas City, Mo., a corporation of Missouri. Republished by registrant.

Sanamire

FOR UPHOLSTERY PADDING MATERIAL AND MATTRESS FILLING.
Claims use since Apr. 17, 1946.

CLASS 34

HEATING, LIGHTING, AND VENTILATING APPARATUS

Reg. No. 111,155. Registered July 4, 1916. AMERICAN DISTRICT STEAM COMPANY, North Tonawanda, N. Y., a corporation of New York. Republished by registrant.

AOSCO

FOR BOILERS, COOLING AND HEATING COILS, EXPANSION-VALVES FOR RADIATORS AND STEAM-TRAPS, RADIATORS, RADIATOR-VALVES, STEAM-TRAPS FOR STEAM-PRESSURE USAGE, STEAM-SEPARATORS, VARIATORS FOR PROVIDING FOR EXPANSION AND CONTRACTION OF PIPES, STEAM WATER-HEATERS, DAMPER-REGULATORS, STEAM-ACTUATED TEMPERATURE-REGULATORS AND FITTINGS FOR STEAM-HEATING SYSTEMS, ADJUSTABLE ANNULAR STEAM-PIPE WEDGES, ANCHORAGE AND ANCHOR SPECIALS TO HOLD STEAM PIPES AND FITTINGS AGAINST EXPANSION BY HEAT, STEAM-JOINT CLAMPS, PIPE-GUIDES FOR CENTERING PIPES IN CASINGS OF UNDERGROUND STEAM - MAINS, SLOTTED ANGLE - FLANGES, SLEEVES AND STRAINERS ESPECIALLY CONSTRUCTED FOR HEAVY-PRESSURE AND UNDERGROUND STEAM SYSTEMS, HOT, WATER-STORAGE TANKS, FOOT-VALVE STRAINERS FOR STEAM SYSTEMS, TUNNEL-FITTINGS, T's AND UNIONS SPECIALLY CONSTRUCTED FOR UNDERGROUND STEAM-MAINS, VALVE-CURBS AND VALVE-SHIELDS FOR UNDERGROUND STEAM-MAINS, SPECIALLY-CONSTRUCTED UNIONS AND UNION-ELBOWS, ANGLE-VALVES, GLOBE-VALVES, REDUCING-VALVES AND CONTROLLING-VALVES FOR USE IN CONNECTION WITH RADIATORS, BACK-PRESSURE VALVES FOR STEAM SYSTEMS, SPECIALLY - CONSTRUCTED HEAVY-PRESSURE GATE STEAM-VALVES; STEAM-PRESSURE REDUCING, REGULATING, RELIEF, AND SAFETY VALVES; PIPE-RECEIVERS FOR STEAM-HEATING SYSTEMS; SPECIALLY - CONSTRUCTED AND PRESSURE-TESTED BALL-JOINTS, BUSHINGS, BRANCH FITTINGS, COMPANION FLANGES, COUPLINGS, CROSSES, ELBOWS, COLLARS, ECCENTRIC FITTINGS, LATERALS, NIPPLES, UNIONS, PIPE, REDUCERS, PIPE-BENDS, PIPE-FITTINGS, BOTH FLANGED AND THREADED, CAST-IRON AND MALLEABLE, AND SPECIALLY ADAPTED FOR USE WITH HEAVY-PRESSURE AND UNDERGROUND STEAM-SERVICE, AND ECONOMY-COILS FOR REMOVING HEAT FROM THE WATER OF CONDENSATION IN STEAM-HEATING SYSTEMS.
Claims use since about April 1910.

Reg. No. 316,317. Registered Aug. 21, 1934. NORGE CORPORATION, Detroit, Mich. Republished by Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois.

BROILATOR

FOR COOKING STOVES ADAPTED FOR USE WITH GAS FUEL.
Claims use since on or about Sept. 5, 1933.

CLASS 35

BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES

Reg. No. 284,265. Registered June 23, 1931. VICTOR MANUFACTURING & GASKET COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

VICTOR

FOR GASKETS AND PARTS THEREOF, SOFT METALLIC AND NONMETALLIC WASHERS; TREATED AND UNTREATED PAPER, SHEET CORK, COMPRESSED ASBESTOS SHEETS, ASBESTOS MILLBOARD SHEETS, FELT SHEETS AND STRIPS, SOFT-METAL SHEETS, AND STAMPINGS THEREFROM FOR MAKING SAID GASKETS AND WASHERS; SHIMS AND STRIP SHIM STOCK; PACKING AND SHEET MATERIAL FOR MAKING THE SAME FOR MACHINERY JOINTS AND JOINTS IN CONTAINERS AND CONVEYORS OF OASES, FLUIDS, AND SEMI-FLUIDS.
Claims use since on or about Nov. 5, 1909.

Reg. No. 438,541. Registered Apr. 27, 1948. RAYBESTOS-MANHATTAN, INC., Passaic, N. J., a corporation of New Jersey. Republished by registrant.

Ray-BOND

FOR FRICTION MATERIALS—NAMELY, BRAKE LININGS AND CLUTCH FACINGS.
Claims use since Mar. 15, 1947.

CLASS 37

PAPER AND STATIONERY

Reg. No. 117,849. Registered Aug. 7, 1917. FOX RIVER PAPER COMPANY, Appleton, Wis. Republished by Fox River Paper Corporation, Appleton, Wis., a corporation of Wisconsin.

Old Faithful

FOR BOND-PAPER, BANK-NOTE PAPER, DOCUMENT-PAPER, WRITING-PAPER, PRINTING-PAPER, AND ENVELOPS.
Claims use since Jan. 1, 1916.

Reg. No. 120,091. Registered JAN. 8, 1918. FOX RIVER PAPER CO., Appleton, Wis. Republished by Fox River Paper Corporation, Appleton, Wis., a corporation of Wisconsin.

Stratosphere

FOR WRITING PAPER.
Claims use since Aug. 17, 1917.

Reg. No. 120,092. Registered Jan. 8, 1918. FOX RIVER PAPER CO., Appleton, Wis. Republished by Fox River Paper Corporation, Appleton, Wis., a corporation of Wisconsin.

RIGHT-OF-WAY

FOR WRITING PAPER.
Claims use since Aug. 7, 1917.

Reg. No. 209,232. Registered Feb. 16, 1926. THE CLEVELAND LINEN & MANUFACTURING COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

LINERETTE

FOR PAPER IMPREGNATED OR COATED WITH MATERIALS OF NONSTICKING QUALITIES FOR HANDLING UNCURED RUBBER.
Claims use since about Mar. 1, 1925.

Reg. No. 225,171. Registered Mar. 15, 1927. NATIONAL BLANK BOOK CO., Holyoke, Mass. Republished by National Blank Book Company, Holyoke, Mass, a corporation of Massachusetts.

MOGUL

FOR LOOSE-LEAF STRUCTURES, AS RING BOOKS.
Claims use since Mar. 1, 1926.

Reg. No. 225,957. Registered Mar. 29, 1927. NATIONAL BLANK BOOK CO., Holyoke, Mass. Republished by National Blank Book Company, Holyoke, Mass, a corporation of Massachusetts.

Monarch

FOR LOOSE-LEAF STRUCTURES, AS RING BOOKS.
Claims use since Sept. 1, 1926.

Reg. No. 441,002. Registered Oct. 12, 1948. JACK DANIEL DISTILLERY, LEM MOTLOW, PROP., INC., Lynchburg, Tenn., a corporation of Tennessee. Republished by registrant.

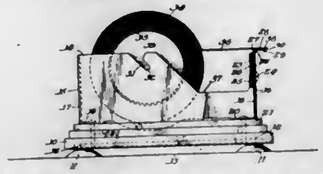
JACK DANIEL'S

FOR WHISKEY.
Claims use since 1875.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 334,143. Registered Apr. 21, 1936. COOK, WATKINS & PATCH, INC., Boston, Mass., a corporation of Massachusetts. Republished by registrant.

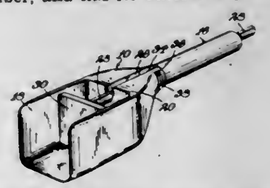


TECHNA CRAFT

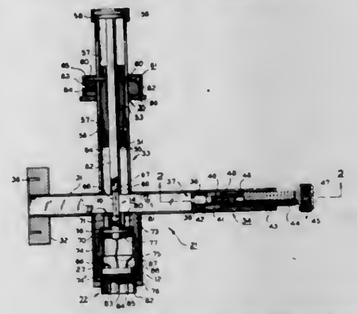
FOR GRANITE MONUMENTS.
Claims use since May 1, 1934.

REISSUES

JUNE 28, 1949



23,129
TAPE DISPENSER
John A. Borden, St. Paul, Minn., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn., a corporation of Delaware
Original No. 2,221,213, dated November 12, 1940, Serial No. 93,661, July 31, 1936. Application for reissue February 3, 1949, Serial No. 74,281
Renewed September 9, 1939
5 Claims. (Cl. 164—84.5)



5. A device for dispensing tape coated with a pressure-sensitive adhesive comprising means for rotatably supporting a roll of said pressure-sensitive adhesive tape, a member fixed to said roll supporting means and comprising a smooth hard surface to which said tape will lightly and detachably adhere by reason of its pressure-sensitive coating when brought into contact therewith, said surface extending away from said roll supporting means and terminating in a severing edge, the area of said smooth surface being such as to provide adherence of the tape thereto with sufficient firmness to support and retain the end of the tape and prevent accidental displacement thereof under normal conditions of usage, said severing edge being so disposed that when the tape is moved toward it, said tape will first contact said smooth hard surface and on slight further movement will contact said severing edge, said severing edge being closely adjacent to said smooth hard surface so that the tape is retained by the latter against side-wise slippage during the severing of a strip of tape on said severing edge, there being a free space between said tape engaging surface and said roll in a manner permitting the portion of tape extending from said roll to said surface to be grasped with the fingers for detachment from said surface for withdrawal of a portion of said tape from said roll thereof.

23,130
SPOON, SHOVEL, OR THE LIKE IMPLEMENT WITH A PUSHER MEMBER
Arthur William Tanner, Aldershot, England
Original No. 2,435,805, dated February 10, 1948, Serial No. 648,358, February 18, 1946. Application for reissue May 6, 1949, Serial No. 91,855. In Great Britain February 27, 1945
3 Claims. (Cl. 30—128)

1. An implement of the character described comprising a hollow handle member, and a bowl carried thereby, which handle member has a lateral opening extending from end to end thereof, in combination with a pusher member movable in the bowl in the direction of its length, and an operating rod that has one end portion attached to the pusher member, extends through the handle member, and has its other end portion situated outside the handle member, which pusher member and operating rod are removable from the implement by movement in a direction transverse to the length thereof.

23,131
TUNED MICROWAVE WATTMETER
Hugh E. Webber, Huntington, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Original No. 2,419,613, dated April 29, 1947, Serial No. 514,111, December 13, 1943. Application for reissue April 29, 1947, Serial No. 750,841
12 Claims. (Cl. 178—44)

1. In a microwave wattmeter, in combination, a rectangular hollow wave guide adapted to receive microwave energy at one end and having an adjustable position closure at the other end, and a barretter mounting assembly intermediate the ends of said wave guide, said mounting assembly including a concentric adjustable tuning stub line laterally extending in one direction from the wave guide and a connector assembly laterally extending in the opposite direction from said wave guide with a barretter unit mounted between said stub line and the connector assembly, said stub line including a center conductor with a connection socket for the barretter unit in the end thereof and said connector assembly including a second connection socket for said barretter unit insulated from the wave guide.

PLANT PATENTS

GRANTED JUNE 28, 1949

Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.

848
JUNIPER TREE
Scott Wilmore, Wheatridge, Colo.
Application August 22, 1947, Serial No. 770,068
1 Claim. (Cl. 47—59)

A new and distinct variety of Juniper tree, characterized as to novelty by its silver-gray color, and the habit of this coloring of growing more brilliant during the winter season, particularly increasing such brilliancy the more it is exposed to the sun; by the density of its whipcord foliage even in young growths; by its slow growing habit to average height; and by the natural pyramidal shape of the tree without shearing, substantially as shown and described.

849
ROSE PLANT
Josephine D. Brownell, Little Compton, R. I.
Application April 22, 1946, Serial No. 663,872
1 Claim. (Cl. 47—61)

The hardy hybrid *Rosa wichuraiana* hybrid tea rose plant variety herein disclosed, characterized by its resistance to winter injury, its mild pleasing fragrance, its leaflets of a brilliant green, with form and color substantially as described and shown, and its flower being of Red to Pink shades with Yellow overlay.

850
ROSE PLANT
Alfred Krebs, Montebello, Calif., assignor to Howard & Smith, Montebello, Calif.
Application December 17, 1947, Serial No. 792,237
1 Claim. (Cl. 47—61)

The new and distinct variety of hybrid tea rose plant, substantially as herein shown and described, characterized particularly by its strong, compact growth; its large, well-branched bloom trusses; its continuous production of large quantities of flowers; and its flower of white petals with highly contrasting chocolate colored anthers supported by red filaments.

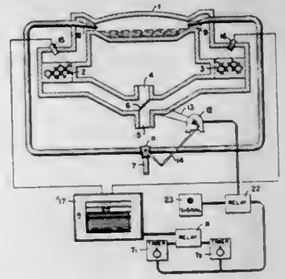
851
POLYANTHA ROSE PLANT
Carl George Duehrsen, Montebello, Calif., assignor to Howard & Smith, Montebello, Calif.
Application December 17, 1947, Serial No. 792,262
1 Claim. (Cl. 47—61)

The new and distinct variety of polyantha rose plant of the Mme. C. Brunner type, substantially as herein shown and described, characterized particularly by its erect growth; its long canes; its long pointed bud; and its deep pink flowers of good petalage and excellent keeping qualities.

PATENTS

GRANTED JUNE 28, 1949

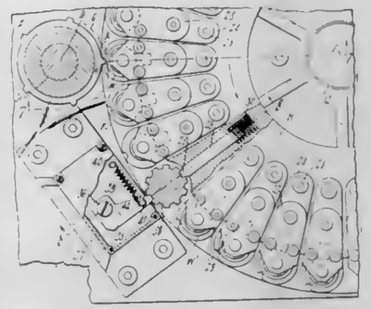
2,474,206
PRODUCTION OF VINYL CHLORIDE
Willem Leendert Johannes de Nie, Amsterdam, Netherlands, assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application July 21, 1947, Serial No. 762,535. In the Netherlands October 5, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires October 5, 1963
5 Claims. (Cl. 260—656)



4. The process for the production of vinyl chloride which comprises subjecting ethylene dichloride to pyrolyzing conditions effecting the pyrolysis of ethylene dichloride to vinyl chloride and hydrogen chloride, combining at least a part of said pyrolysis products with acetylene and subjecting the resulting mixture to hydrochlorinating conditions effecting the interaction of acetylene with hydrogen chloride with the formation of vinyl chloride.

2,474,207
ESPECIALLY REACTIVE LIME AND METHOD OF PRODUCING IT
Wheeler G. Lovell, Verle A. Miller, Maurice J. Mulligan, and Hart K. Lichtenwainer, Detroit, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
No Drawing. Application July 23, 1945, Serial No. 606,710
4 Claims. (Cl. 23—186)

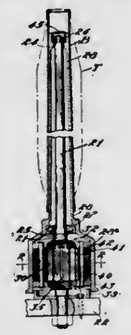
1. The method of producing an especially reactive lime which includes heating calcium hydroxide at low effective temperature under controlled conditions to remove most but not all of the water of constitution therefrom, the heating being discontinued when the product contains calcium hydroxide within the range of about 10% to 20%.



2,474,208
CONTROL INSTRUMENT
Joseph P. Vollrath, Glenside, Pa., assignor, by mesne assignments, to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application May 25, 1944, Serial No. 537,343
5 Claims. (Cl. 236—15)

1. In a regenerative furnace reversal control system for a furnace having two ends, each of which has a regenerative checker brickwork connected therewith through which combustion air is supplied and the products of combustion are withdrawn and a means to direct alternately the combustion air through the checkers, a radiation pyrometer responsive to the temperature of each checker, a control instrument, means to connect differentially said pyrometers to said instrument, a pair of timers, means operated by said instrument upon the attainment of a predetermined positive potential by said pyrometers to energize one timer, means operated by said instrument upon the attainment of a predetermined negative potential to energize the other timer, means operated by each timer to initiate immediately the reversal of said furnace in one direction, and means operated by each timer if the other timer has not in the meantime been

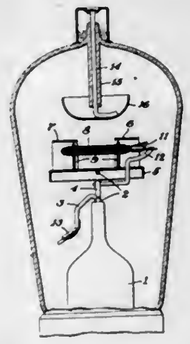
energized to initiate the reversal of said furnace in the opposite direction.



2,474,209
METHOD AND MACHINE FOR GENERATING SPLINES AND THE LIKE
James L. Williamson, Springfield, Vt., assignor to The Fellows Gear Shaper Company, Springfield, Vt., a corporation of Vermont
Application February 18, 1944, Serial No. 522,852
11 Claims. (Cl. 90—7)

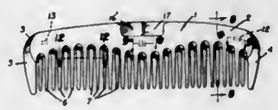
1. The method of generating splines and the like in shafts without formation of fillets at the roots of the splines or undesired rounding of their outer extremities, which comprise effecting relative cutting traverse between a work piece and a cutting tool, having a tooth with a cutting edge conjugate to the contour to be generated in the work piece, revolving the work piece about an axis at one side of its own axis and causing any given element of the work piece to remain in fixed

angular relation to a line between the work piece and the axis of revolution while the work piece passes the cutter, and simultaneously rotating the cutter so that the said tooth is revolved in an orbit which is transverse to the directions of such reciprocation and intersects the orbit in which a portion of the work piece is revolved about the before mentioned axis.



2,474,210
BOBBIN HOLDER FOR SPINNING AND TWISTING FRAMES
Edward James Abbott, Wilton, N. H., assignor to Abbott Machine Company, Wilton, N. H., a corporation of New Hampshire
Application December 10, 1947, Serial No. 790,868
11 Claims. (Cl. 57—100)

1. A rotatable bobbin holder for spinning and twisting frames comprising a spindle adapted to be secured at its bottom to a base, a sleeve rotatable around the upper portion of the spindle, said sleeve being adapted for reception of a bobbin placed thereon over the end of the sleeve, spaced bearings on the spindle acting to position the sleeve with relation to the spindle, and a motor for rotating said sleeve around said spindle comprising a stationary electric winding disposed around the lower portion of the spindle, below the lower one of said bearings, said spindle extending through the interior of said winding, and an annular rotor connected to the lower portion of said sleeve and surrounding said stationary winding.



2,474,211
ELECTRON DISCHARGE DEVICE
Raymond Richard Back, London, England, assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application May 20, 1947, Serial No. 749,142
In Great Britain July 7, 1939
Section 1, Public Law 690, August 8, 1946
Patent expires July 7, 1959
3 Claims. (Cl. 250—27.5)

1. An electron discharge device comprising an indirectly heated cathode mounted substantially transverse to the axis of said device, a heater passing through said cathode and projecting through the ends thereof, an anode having a transverse dimension substantially equal to a transverse dimension of said cathode mounted in spaced relation from one side of said cathode, and shield means mounted adjacent said cathode, said means including a base shield positioned

from said cathode on a side remote from said one side and end shield means extending from said base shield and interposed between said anode and projecting parts of said heater.

2,474,212
COMB
George F. Benco, Philadelphia, Pa.
Application January 7, 1947, Serial No. 720,631
4 Claims. (Cl. 132—11)

1. A sectional comb comprising a pair of elongated complementary sections having depending double spaced teeth, interlocking arcuate moldings and complementary slots formed on the engaging inner faces of the sections, interengaging fingers and sockets spaced along the inner faces of the sections and centrally extending finger manipulating extensions on said sections for moving said section apart.

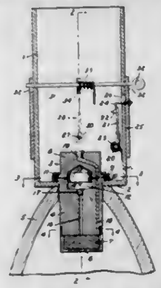
2,474,213
METHOD OF INCREASING THE AROMATICITY OF HYDROCARBON OIL
James F. Black, Roselle, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application May 22, 1946, Serial No. 671,653
7 Claims. (Cl. 260—668)

1. The method of increasing the aromaticity of a petroleum naphtha which comprises contacting the said naphtha at elevated temperatures with a catalyst consisting essentially of a group VI heavy metal oxide carried on a zinc spinel base prepared by precipitating said zinc spinel from a solution containing a water soluble zinc salt and a water soluble aluminum salt, said solution being maintained at 150° to 200° F. during the precipitation.

2,474,214
PREPARATION OF ZINC ALUMINATE SPINEL CATALYST
James F. Black, Roselle, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application May 22, 1946, Serial No. 671,654
5 Claims. (Cl. 252—465)

1. In a method of preparing an aromatizing catalyst consisting of a group VI metal oxide supported on a zinc-aluminate spinel having a low apparent density, the method of reducing the density of said spinel which comprises preparing the spinel by simultaneously interacting an acid solution of a zinc salt with a basic solution of an alkali metal aluminate containing an excess of said base while at a temperature between about 150° F. and 200° F. to form a basic slurry containing zinc-aluminate as a precipitate and separating said precipitate.

2,474,215
PREPARATION OF A ZINC ALUMINATE-GROUP VI METAL OXIDE CATALYST
Kenneth K. Kearby, Cranford, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application December 31, 1947, Serial No. 795,139
10 Claims. (Cl. 252—465)



1. A process for preparing a catalyst adapted for the reforming of hydrocarbons to increase their aromaticity which comprises interacting an acidic solution of a zinc salt with a basic solution of an alkali metal aluminate to form a slurry containing zinc aluminate precipitate, separating the precipitate from the resulting slurry, washing the precipitate so separated, drying the washed precipitate, thereafter calcining the dried precipitate for several hours at a temperature of about 1000°–1200° F., and incorporating a group VI metal oxide into said precipitate to form a catalyst comprising a zinc aluminate spinel as a major constituent and a group VI metal oxide as a minor constituent.

2,474,216
REDUCTION OF KETONES
Philip J. Breivogel, Glen Ridge, N. J., assignor to White Laboratories, Inc., Newark, N. J.
No Drawing. Application January 9, 1946, Serial No. 640,137
14 Claims. (Cl. 260—635)

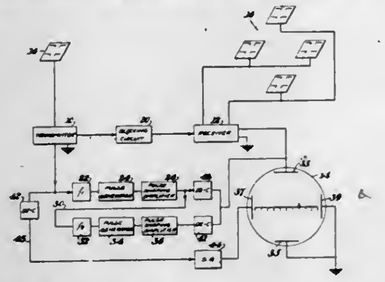
1. The method for producing a pinacol which comprises subjecting a solution of a mononuclear aryl lower alkyl ketone to the action of an alkali metal-lead alloy containing from about 5 to about 40 per cent by weight of alkali metal and a hydrogen donor.

2,474,217
GRENADE FUSE
Morton Burden, Jr., Sewickley, Pa.
Application March 30, 1945, Serial No. 585,758
3 Claims. (Cl. 102—71)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A multi-purpose grenade fuze and launching device adapted to be either manually thrown or fired from a rifle comprising a cylindrical member constructed and arranged to be mounted on a rifle for launching, and also to be grasped as a handle for throwing, a cylindrical sleeve frictionally mounted thereon for longitudinal sliding movement thereon, said cylinder member having an apertured wall at one end thereof, a body fastened to said wall and extending through the aperture thereof and having means for engaging a grenade body, a booster charge carried by said body, first primer means carried by said body, a time delay powder train extending from said first primer means to said booster charge, a second primer means carried by said body for

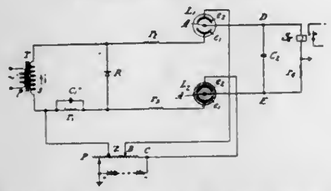
exploding said booster charge directly, inertia means forwardly movable on impact to detonate said second primer means, combustible means restraining said inertia means and connected to said delay powder train intermediate the ends thereof, and means operable by said cylindrical sleeve for detonating said first primer means.

2,474,218
BELT LOADER
Arthur L. Bureau, United States Navy
Application November 5, 1943, Serial No. 509,081
16 Claims. (Cl. 86—48)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



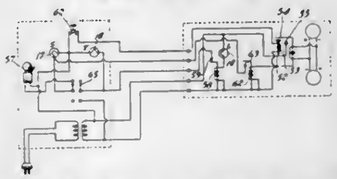
10. In a cartridge feeding mechanism, a magazine having a pair of hoppers, a pair of shutters to support individual columns of cartridges in the hoppers, a shaft for each of the shutters, a selector wheel having a rim, a plurality of pins of different lengths, means by which pins of similar lengths are attached to the rim in individual circular series and in prearranged sequential order, an arm secured to one of the shafts and extending into the path of one of the series of pins, an arm loose on said one shaft, being located to one side of said secured arm and extending into the path of another one of the series of pins, means operatively connecting said loose arm with the other shaft, and means to move the wheel with a step motion.

2,474,219
PULSE GENERATING SYSTEM
Henri G. Busignies, Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation, a corporation of Delaware
Application September 14, 1942, Serial No. 458,191
9 Claims. (Cl. 315—22)



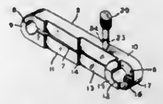
1. In a system for providing a calibrated scale for an oscillograph to cover a desired portion of the interval between successive impulses of a

source of recurring impulses, wherein the scale is produced by generating two series of pulses in response to each of said recurring impulses, the first of said series of pulses having a frequency such that the pulses provide major scale division markers and the second of said series of pulses having a frequency which is an integral multiple of the frequency of the first-mentioned series, thereby providing minor division markers for the scale, the method of producing said pulse series comprising generating one of the series of



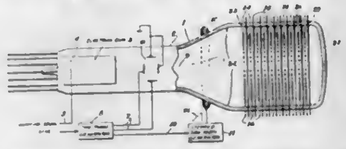
pulses by exciting a circuit to provide a wave train, and producing in response to each cycle of the wave train one of the pulses comprising said one series, and generating other of the two series of pulses by dividing the recurring impulse energy, retarding one part thereof to provide the second pulses of the series, repeating the division and retarding process on each such delayed part of the pulse energy, and applying the series of pulses providing major and minor scale division markers to the oscillograph.

2,474,220
PULSE RECEIVING CIRCUIT
Lucien A. B. Cabes, Antwerp, Belgium, assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application January 22, 1943, Serial No. 473,272
In the Netherlands July 11, 1941
10 Claims. (Cl. 178—67)



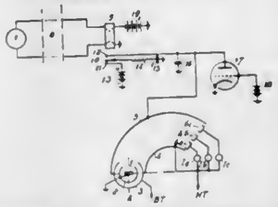
1. System for reception of wired carrier currents including transformer means for collecting said carrier currents from the line, two cold cathode tubes connected so as to be fed with said currents from said transformer means, means for keeping the first tube lighted under no-signal conditions including biasing potentials applied to the control electrodes of said tube, means for extinguishing said first tube when a signal is received including bias changing means connected to the control electrodes of said tube, means for lighting the second tube when a signal is received and including means for changing the control bias applied to said second tube, and a polarized relay with two windings, each of which is inserted in the anode circuit of one of the two cold-cathode tubes, whereby incoming current pulses cause the reversal of lighting of the two tubes and the actuation of said relay means.

2,474,221
SMOKE DETECTOR AND SIGNAL FOR DUCTS
Clarence Noel Cahusac, Newark, N. J., assignor to C-O-Two Fire Equipment Co., Newark, N. J., a corporation of Delaware
Application September 28, 1946, Serial No. 700,051
8 Claims. (Cl. 177—311)



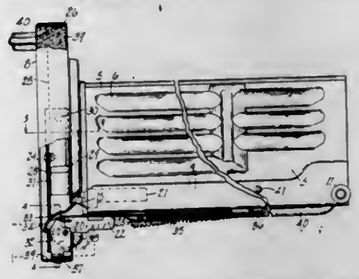
8. A smoke detector for detecting suspended matter in fluid flowing through a duct having an opening in one wall thereof comprising a support constructed to be secured upon the exterior of the duct and closing the duct wall opening against the entry of light therethrough into the duct, the support having an aperture therein in alignment with the opening in the duct, a light source carried by the support to project a beam of light outwardly through the aperture, and a photoelectric element mounted on said support and shielded thereby against direct rays of light from the light source, the photoelectric element having a light-sensitive surface extending approximately parallel to the beam of light, a second photoelectric element carried by the support and subject to light from the source transmitted other than through the fluid being tested, means connecting the photoelectric elements in an electric circuit so that the photoelectric effects of the second photoelectric element oppose the photoelectric effects of the first-named photoelectric element, and an electrical responsive means connected in said circuit to indicate the presence of smoke in the fluid being tested.

2,474,222
SPLIT RING RETAINER EXTRACTOR
Hermenegilde P. Carrier, Charlestown, Mass.
Application May 15, 1945, Serial No. 593,904
3 Claims. (Cl. 29—229)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A split ring retainer extractor comprising a pair of operating arms normally bearing against each other, said arms being provided with an opening therebetween and adapting said extractor to be fitted over a member carrying a split ring retainer, an arcuate ledge supported upon each arm at one side of said opening and extending outwardly and axially thereof, said ledges providing an arcuate surface coextensive with the bounding surface of said opening and adapted to embrace and contact the outermost peripheral edge of said split ring retainer, and a lug supported upon each arm, said lugs extending outwardly and axially of said opening and substantially diametrically opposite said arcuate surface, said lugs being adapted to extend into the split of said split ring retainer when said arms bear against each other, said opening having a substantially semicircular cross section on the side of said ledges and a flattened elliptical cross section on the side of said lugs, thereby providing a shelf between each of said lugs and the adjacent ends of said ledges for contacting a portion of said split ring retainer.

2,474,223
ELECTRON TUBE
Paul Georges Chevigny, Paris, France, assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application January 26, 1946, Serial No. 643,787
16 Claims. (Cl. 250—152)



1. Electron beam-producing apparatus comprising means for producing an electron beam, a plurality of rows of target elements arranged in the path of said beam, each row consisting of a plurality of target elements spaced in a plane transverse to the plane along which the rows are spaced, and beam-deflecting means for deflecting the beam to impinge upon the target elements.

2,474,224
ELECTRONIC SWITCH
Trevor H. Clark, Boonton, N. J., assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application March 20, 1947, Serial No. 735,954
In France April 28, 1939
Section 1, Public Law 690, August 8, 1946
Patent expires April 28, 1959
7 Claims. (Cl. 315—21)

1. A system for electronic switching, comprising electron beam switching means including a pair of deflecting electrodes and a plurality of target anodes disposed therebetween, one of said electrodes normally being kept at a fixed potential and the other electrode being at a distance from said one electrode such that its potential with respect thereto is of a value as to at least inhibit current flow therein due to attraction of any of the electron emission of said switching means and due to secondary electrons attracted from said other electrode to said one electrode, and means for supplying voltage impulses to said other electrode including means for additively storing said voltage impulses, whereby the potential of said other electrode is successively varied to effect a deflection of the electron toward target anodes substantially adjacent to said other electrode.

2,474,225
COOKING STOVE BROILER AND DOOR ASSEMBLY
James M. Cook and Robert C. Lang, Kalamazoo, Mich., assignors to Kalamazoo Stove and Furnace Company, Kalamazoo, Mich.
Application August 12, 1946, Serial No. 689,963
9 Claims. (Cl. 126—41)

4. A hinge structure for attaching a broiler chamber door to a broiler body comprising fixed hinge members having vertically spaced rearwardly extending flanges arranged to be secured to said broiler above and below the bottom wall thereof, an inner panel for said door defining a pair of apertures adapted to receive the forward ends of said hinge members, attaching brackets secured to the forward side of said panel and having lower portions of channel-shaped cross section defining pivot pin openings, and pivot pins extending through said openings and the forward portions of said fixed hinge members, the webs of said lower portions being cut away whereby the forward ends of said hinge members may pass thereover.

8. In combination with a cooking stove having a broiler chamber opening to the front thereof, a broiler body slidable through said opening, said body having inwardly stepped ribs along the lower side edges thereof, fixed hinge members secured to the front of said ribs and having forwardly extending arcuate portions of channel shaped cross section, fingers extending from the inner sides of said hinge members and secured to said body on the sides of said ribs, a broiler chamber door having an inner panel defining apertures to receive said arcuate portions and pivoted thereto on the forward side of said panel, and tension spring members secured between the under side of said broiler body and said inner door panel to urge said door toward closed position.

2,474,226
MAKING LIQUID CARBOHYDRATE-RICH FOODS RESISTANT TO MICROORGANISMS
Gerald H. Coleman, Freeland, and Paul A. Wolf, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application February 7, 1949, Serial No. 75,068
10 Claims. (Cl. 99—150)

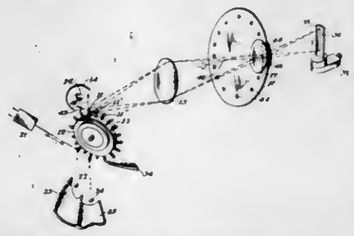
2. The method of imparting to a fruit juice an increased resistance to attack by microorganisms

which comprises dissolving in such food a minor but effective amount of a compound selected from the class consisting of dehydroacetic acid and its sodium, potassium, ammonium and calcium salts.

2,474,227
MAKING CARBOHYDRATE FOODS RESISTANT TO MICROORGANISMS
Gerald H. Coleman and Paul A. Wolf, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application January 13, 1947, Serial No. 721,877
14 Claims. (Cl. 99—91)

1. The method of imparting to foods rich in carbohydrates an increased resistance to attack by microorganisms which comprises bringing into contact with such foods a compound selected from the class consisting of dehydroacetic acid and its sodium, potassium, ammonium and calcium salts.

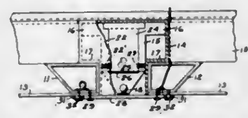
2,474,228
MAKING PROTEINACEOUS AND FATTY FOODS RESISTANT TO MICROORGANISMS
Gerald H. Coleman and Paul A. Wolf, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application January 13, 1947, Serial No. 721,878
14 Claims. (Cl. 99—150)



1. The method of imparting to foods rich in at least one of the class consisting of proteins and fats an increased resistance to attack by microorganisms, which comprises bringing into contact with such foods a minor but effective amount of a compound selected from the class consisting of dehydroacetic acid and its sodium, potassium, ammonium, and calcium salts.

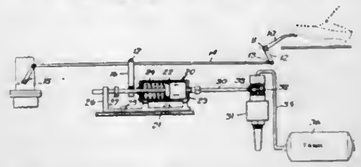
2,474,229
RETARDING GROWTH OF MICROORGANISMS IN LIGHT ALCOHOLIC BEVERAGES
Gerald H. Coleman and Paul A. Wolf, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application January 13, 1947, Serial No. 721,879
13 Claims. (Cl. 99—48)

1. The method of imparting to light alcoholic beverages an increased resistance to attack by microorganisms which comprises dissolving in such beverage a minor but effective amount of a compound selected from the class consisting of dehydroacetic acid and its sodium, potassium and ammonium salts.



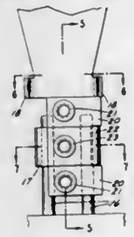
2,474,230
TWO-DIMENSIONAL PHOTOELECTRIC SORTING
David C. Cox, Grand Rapids, Mich., assignor to Electric Sorting Machine Company, Grand Rapids, Mich., a corporation of Michigan
Application January 23, 1948, Serial No. 3,876
11 Claims. (Cl. 250—41.5)

1. In a photoelectric sorter a conveyer for carrying articles substantially along a linear path, lens means for focusing an image of the article substantially in a focal plane, a photoelectric tube, a second lens means at said focal plane for focusing an image of the first lens means on the photoelectric tube, and a scanning disc in said focal plane with apertures moving transverse to said conveyer path at a multiple of the speed of said



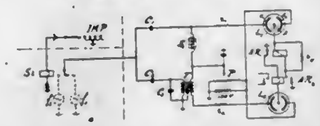
conveyer for scanning successive areas on the surface of said article.

2,474,231
SLIDING BALL HITCH FOR AUTOMOBILES
Ralph Varston Crosley, Pacoima, Calif.
Application May 29, 1947, Serial No. 751,347
4 Claims. (Cl. 280—33.44)



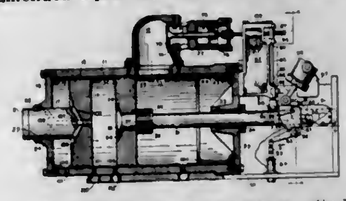
1. An automobile hitch device comprising a casing adapted to be connected to the rear of an automobile, said casing having an opening in its rear end and provided with interior shoulder portions, a block slidable in and out of the casing through the rear opening thereof and having portions adapted to engage with the shoulder portions of the casing whereby to limit its outward movement, said block having a recess with a sloping surface in the upper surface thereof, a latch plate with an upwardly extending lip on the outer edge positioned in said recess, a spring in the block for urging the plate upward to lock the block in the extended position, and means on the block adapted for the connection thereto of a hitch device of a trailer or the like.

2,474,232
SAFETY CONTROL DEVICE
Max Dach, Flushing, N. Y.
Application July 14, 1944, Serial No. 544,971
32 Claims. (Cl. 123—98)



4. The combination with a machine having an accelerator of a cylinder, a piston in said cylinder, a spring yieldingly pushing said piston towards the end of said cylinder, a shaft on said piston and normally free of the accelerator, and means operatively connecting said accelerator to said shaft when said piston is moved to one end of said cylinder by said spring.

2,474,233
SELECTOR BRUSH
Gerald Deakin, New York, N. Y., assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application February 23, 1945, Serial No. 579,368
10 Claims. (Cl. 200—16)



1. An electrical contact brush for a selector switch comprising a metallic spring member having a contact surface for successive engagement with a series of stationary terminals, a metallic guide member mounted on said spring member in alignment with said surface and spaced from the forward edge thereof in the direction of movement of said brush, means for electrically insulating said guide member from said spring, said contact surface being shorter in the direction of movement of said brush than the space between adjacent terminals and said guide member extending forwardly in the direction of movement of said brush to engage a terminal before said spring contact surface leaves the succeeding terminal, and means to urge said contact surface towards said terminal.

2,474,234
ELECTRICAL SIGNAL TRANSMISSION SYSTEM
Charles de Vriendt and Lucien A. B. Cabes, Antwerp, Belgium, assignors to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application April 1, 1943, Serial No. 481,511
In the Netherlands June 21, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires June 21, 1961
12 Claims. (Cl. 179—16)

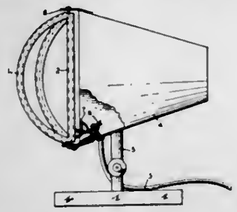
1. An electrical signal transmission system comprising a transmission line, signal transmission apparatus connected to one terminal of said line, said signal transmission apparatus comprising means to transmit alternate impulses of two different frequencies, means connected to the opposite end of said line for receiving said impulses said receiving means comprising a pair of circuits, means in one circuit responsive to energy of one of said frequencies applied thereto to register the beginning of an impulse and means in the other of said circuits responsive to energy of the other of said frequencies applied thereto to register the end of an impulse and relay means associated with said receiving means jointly controlled by both of said circuits for retransmitting signals measured by the two frequencies of each impulse received.

2,474,235
PNEUMATIC IMPACT DEVICE
Oscar C. Dresser, Arlington, Va., Oscar Norgorden, Washington, D. C., and Francis J. Shanahan, Alexandria, and Carroll R. Shuler, Stanley, Va.
Application December 14, 1945, Serial No. 635,118
7 Claims. (Cl. 121—21)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

7. In a pneumatic impact device, a cylinder, a striker piston slidably journalled in the forward end thereof, a shaft affixed to said piston and extending through an end of said cylinder, a driving piston slidably journalled in said cylinder and spaced from said striker piston, a shaft fixed to said driving piston and extending through the opposite end of said cylinder, the space between said driving piston and the latter end of said cylinder forming a charging chamber, said charging chamber having an exhaust chamber connected thereto, means for opening and closing said exhaust chamber, said opening and closing means being controlled by the movement of said driver piston shaft, a gas in the space between said pistons, means for adjusting the initial pressure of the gas between said pistons, and means for applying pressure to said driving piston to cause said striker piston to deliver an impact.

2,474,236
NOVELTY ORNAMENT
Lauretta H. Durbin, Casper, Wyo., assignor of fifty per cent to Miner M. Durbin, Casper, Wyo.
Application August 28, 1946, Serial No. 693,563
6 Claims. (Cl. 46—162)

1. A novelty ornament comprising a frame including a straight length of wire cored material terminating in an arcuate head portion, said head portion including a central arcuate wire cored element and a pair of arcuate forwardly converging wire cored side elements joined at a nose and neck, and two pairs of supporting wire cored leg elements carried by the straight length of wire cored material, the free ends of said leg elements forming co-planar bearing feet spaced parallel to the straight length of wire cored material, each wire cored element comprising a pair of relatively twisted wires and fibrous material gripped by and covering said wires, said fibrous material tapering in length from the middle to the ends of each of said wire cored elements.

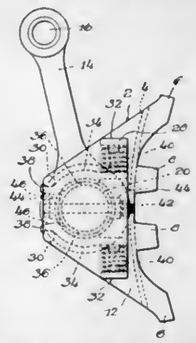


2,474,237
PREPARATION OF TERTIARY ALKYL SULFENAMIDES
Lawrence T. Eby, Roselle, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application November 21, 1945, Serial No. 630,141
4 Claims. (Cl. 260—551)

4. A process for the preparation of compounds of the general formula

$$R-\underset{R}{\overset{R}{C}}-S-NH_2$$

where each R group is an alkyl group, which comprises reacting a tertiary alkyl mercaptan with chloramine.

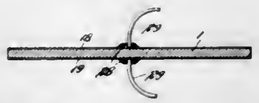


2,474,238
SINGLE NULL LOOP ANTENNA
Myron Y. Eck and Jerome J. Hodapp, Dayton, Ohio
Application June 27, 1945, Serial No. 601,912
6 Claims. (Cl. 250—33.67)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

4. A single null antenna comprising a wave guide and a loop antenna positioned at one end thereof, said loop antenna comprising a pair of loop components lying in crossed planes and being receptive to energy lying in a frequency range in which said wave guide presents a high impedance, said loop antenna and said wave guide cooperating to produce a single null radiation pattern.

2,474,239
BRAKEHEAD BALANCING DEVICE
Norman Flesch, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application September 16, 1944, Serial No. 554,383
18 Claims. (Cl. 188—207)

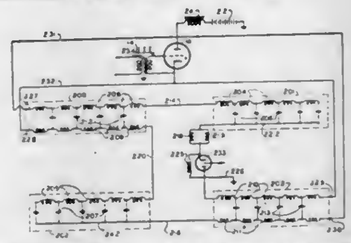
1. In a brake head balancing device for an assembly comprising brake head and support members and a beam with a cylindrical trunnion extending through said members to afford a pivotal connection therebetween; the combination of spaced fulcrum means on said head member, spaced opposed levers in engagement at corresponding ends thereof with respective fulcrum means, resilient means compressed between the opposite corresponding ends of said levers and abutment means on said head member, arcuate surfaces on said levers frictionally engaging the cylindrical perimeter of said trunnion, and a bolt and nut assembly extending through an opening in said trunnion and secured thereto, said assembly comprising a washer having surfaces adapted for flat face engagement with the fulcrumed ends of said levers for limiting rotation of said head member on said trunnion, said washer being adapted for abutment with a portion of said head member to limit movement of the latter toward the end of the trunnion.



2,474,240
FOCUSING X-RAY MONOCHROMATOR
Herbert Friedman, Arlington, Va.
Application August 8, 1945, Serial No. 609,695
9 Claims. (Cl. 250—51)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

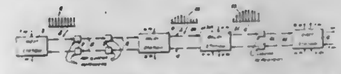
1. An X-ray monochromating and focusing system comprising, a source of non-monochromatic X-ray radiation, and a support having a concave cylindrical surface having bound thereon with a non-crystalline binding material a coating of a finely divided material consisting essentially of selectively reflective crystallites having one axis longer than the other two respective axes, said X-ray source being disposed on the circle defined by said concave cylindrical surface.

2,474,241
PIEZOELECTRIC CRYSTAL STRUCTURE
Kenton Kitch Garrison, East Orange, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application June 29, 1945, Serial No. 602,238
10 Claims. (Cl. 171—327)



10. A piezoelectric device comprising a crystal, a localized area metal contact piece secured to said crystal, an electrode coating covering said contact piece and the adjacent surface of said crystal, said contact piece being drilled to provide a bore for the reception of a mounting pin.

2,474,242
ADJUSTABLE ANTENNA
Carl K. Gieringer, Long Branch, N. J.
Application June 13, 1945, Serial No. 599,296
1 Claim. (Cl. 250—33)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



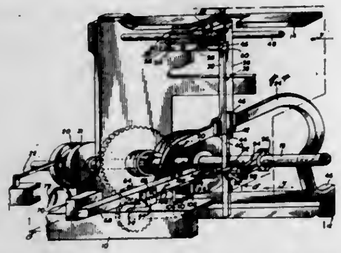
An adjustable doublet antenna system comprising a coaxial transmission line, a first coiled spring, an antenna radiator element connected at one end to the outer end of said first coiled spring, means electrically connecting said first named spring to the inner conductor of the coaxial transmission line, a second coiled spring, at least one antenna radiator element connected at one end to the outer end of said second coiled spring, means electrically connecting the inner end of said second named spring to the outer conductor of the coaxial transmission line, nonconductive mounting means positioned adjacent the said transmission line and mechanically connected to the inner end of said first coiled spring, an annular insulating member coaxial with the said outer conductor, the said member including means whereby the free ends of the said second named radiator element may be attached thereto, and means connected to the free end of the first named radiator and to the said insulating member whereby the effective length of the said radiators may be varied from a remote point.

2,474,243
LINE PULSE MODULATOR
Lewis Greenwald, Neptune, N. J.
Application September 14, 1945, Serial No. 616,440
16 Claims. (Cl. 171—97)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

5. A line pulse modulator including a plurality of four- and two-terminal artificial lines connected in a series circuit with two-terminal lines alternating with said four-terminal lines in said series circuit, a load impedance included in said series circuit, a D. C. source of potential connected across the two remaining terminals of all of said four-terminal lines to charge all of said lines in a resonance-charging manner, and an electronic switch connected across said remaining terminals for shunting said terminals upon the appearance of maximum voltage across said lines, thereby discharging all of said lines simultaneously through said series circuit.

2,474,244
AMPLITUDE MODULATED TIME MODULATED PULSE SYSTEM
Donald D. Grieg, Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application May 19, 1944, Serial No. 536,301
12 Claims. (Cl. 179—15)

1. In a communication system including a plurality of stations, means for communicating intelligence between two of said stations by the use of discrete time modulated pulses, said means including a relay station for amplifying and relaying said time modulated pulses, and means at said relay station for communicating additional intelligence between said relay station and one of said stations by superimposed amplitude modulation of said time modulated pulses comprising a source of intelligence signals and means for amplitude modulating said pulses with said signals.

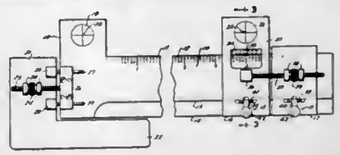


2,474,245
NULL MEASURING BRIDGE
Robert A. Hampshire, West Caldwell, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application September 14, 1944, Serial No. 554,104
10 Claims. (Cl. 171—95)

1. In measuring apparatus of the class described, a Wheatstone bridge circuit which has four arms and two diagonals and which is adapted to be energized by an electric power source connected across one diagonal thereof to actuate indicating means connected across the other diagonal thereof to indicate the condition of balance of said bridge circuit; one of the arms of said bridge circuit including first and second vacuum tubes, each having a cathode, an anode, and a control electrode; circuit means connecting said tubes in series between the terminals forming the ends of said arm of said bridge circuit with the anode of said first tube connected to the cathode of said second tube; biasing means interposed in said last-named connection; means connecting the anode of said first tube to the control electrode of said second tube; means for impressing the signal to be measured between the cath-

ode and control electrode of said first tube; and means providing a degenerative feedback connection between the control electrode and the anode of said first tube, whereby said tubes and indicating means are protected from the detrimental effects of large signals.

2,474,246
ATTACHMENT FOR HOSIERY MACHINES
Julian B. Hardison, Burlington, N. C., assignor to David M. Harman, Burlington, N. C.
Application April 23, 1947, Serial No. 743,435
17 Claims. (Cl. 66—157)

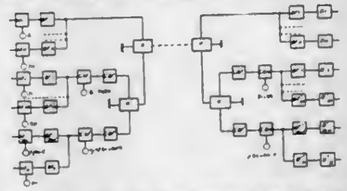


1. A safety attachment for knitting machines having a rotatable and reciprocable camshaft, camshaft shogging mechanism actuatable during narrowing and a power means for operating said camshaft and said knitting machine; comprising, an actuating member secured to said camshaft for rotary and reciprocatory motion therewith, an actuated member controlling the application of power from said power means to said knitting machine, means synchronizing the operation of said shogging mechanism and said actuating member for engaging said actuated member upon continual rotation of said camshaft in its narrowing position for more than one revolution and causing the actuated member to interrupt the application of power to said knitting machine.

2,474,247
SIGNAL TYPE TORQUE INDICATING WRENCH
Mark Hattan, Dayton, Ohio
Application July 8, 1944, Serial No. 544,127
8 Claims. (Cl. 81—52.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

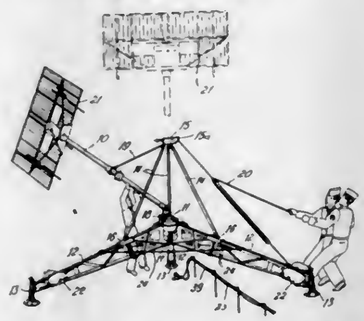
1. A signal type torque indicating wrench including a tubular handle member, a beam member pivotally supported by said handle member and having a projecting portion adapted to be connected to a work head, said beam member serving to transmit torque from the handle to the work head, said beam member extending into said handle member and having a tapered end portion, a sleeve concentrically mounted within said handle member and surrounding the tapered portion of the beam with a spacing therefrom dependent upon the axial position of said sleeve with respect to the tapered portion of the beam, means for axially adjusting said sleeve with respect to said beam to adjustably vary an initial no-load movement of the handle with respect to the beam member, a signal circuit electrical contact positioned within the handle, said beam member forming a second electrical contact, axial adjustment of said sleeve member varying the point of contact to thereby vary the amount of torque load applied to said beam member to cause engagement of said contacts.

2,474,248
PHOTOGRAMMETRIC CALIPER
James E. Henry and Leonard W. Crouch, Dayton, Ohio
Application April 30, 1948, Serial No. 24,296
6 Claims. (Cl. 33—125)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



6. In a photogrammetric caliper a body, a transverse extension at the left of said body, a window in said extension, a cross hair in said window, a preliminary setting block at the left of said extension, a hand-hold integral with said preliminary setting block, said hand-hold extending for a substantial distance along the lower longitudinal edge of said body, screw guides on said preliminary setting block, a thrust block near the left edge of said body, a screw extending through said guides, a hand-rotatable nut cooperating with said screw between said guides, alignment guides extending from said preliminary setting block into said thrust block whereby to hold said preliminary setting block and said body in alignment as regards their lowest longitudinal surfaces, an end-point-setting slide movable along the body, a vernier slide on the left of the end-point-setting slide, a window in said vernier slide, a cross hair in said window, said cross hair being substantially in alignment with the cross hair in said body extension window, a scale extending along the top edge of said body, a vernier scale carried by said vernier slide on a beveled surface bounding an opening in said slide, a plurality of alignment guides on said end-point-setting slide, a screw extending through said guides, a hand-rotatable nut mounted between said guides to cooperate with said screw, a thrust block on said vernier slide to receive the thrust of said screw and a detent on each of the end-point-setting slide and the vernier slide whereby either of said slides may be locked to the body independently of the other slide.

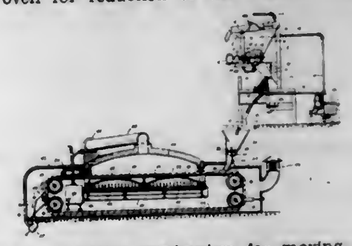
2,474,249
MULTICHANNEL CARRIER COMMUNICATION SYSTEM
Kenneth George Hodgson and Frank Fairley, London, England, assignors to International Standard Electric Corporation, New York, N. Y.
Application May 23, 1947, Serial No. 750,148
In Great Britain April 8, 1946
Section 1, Public Law 690, August 8, 1946
Patent expires April 8, 1966
2 Claims. (Cl. 178—50)



1. A multi-channel signalling system comprising modulating means and filter means for creating a basic group of channels occupying a primary frequency range and impressing said group on a transmission line, modulating means and

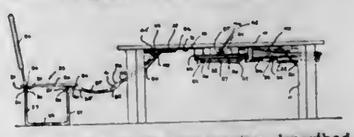
filter means for creating another group of channels occupying a part of said frequency range from one boundary thereof to an intermediate frequency, group modulating means for modulating said other group of channels with a frequency

equal to the sum of said intermediate frequency and the frequency of the other boundary of said range, filter means for selecting the lower side band from the output of said group modulating means and means for impressing said lower side band on said line.



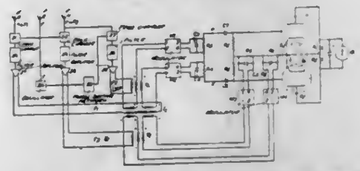
2,474,250
POWER-DRIVEN MECHANISM AND PORTABLE DEMOUNTABLE SUPPORTING STANDARD THEREFOR
Stanley R. Howard, North Quincy, Mass., assignor, by mesne assignments, to Belmont Radio Corporation, Chicago, Ill., a corporation of Illinois
Application July 27, 1944, Serial No. 546,858
21 Claims. (Cl. 248—1)

1. A portable demountable supporting standard for a mechanism including an extended vertical rotatable shaft comprising, a plurality of radially extending supporting arms, junction means for detachably securing said arms together at their inner ends, a plurality of upwardly extending braces detachably individually secured to points on said arms remote from their inner ends, and junction means for securing said braces together at their upper ends and comprising a bearing for the vertical shaft.



2,474,251
DEWATERING AND COKING SLURRY COAL
Andrew F. Howe, St. Louis, Mo., assignor to Centrifugal & Mechanical Industries, Inc., St. Louis, Mo., a corporation of Missouri
Application December 9, 1944, Serial No. 567,436
9 Claims. (Cl. 202—96)

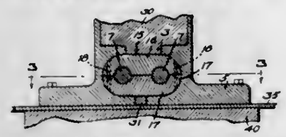
1. An apparatus for recovering sludge or slurry coal, comprising a machine for separating water from said coal, a device for receiving said coal from said machine and for spreading said coal preparatory for the reduction of the volatile content thereof, a relatively wide conveyor for supporting and moving a layer of said coal through an oven for reduction of the volatile content



thereof, operating mechanism for moving said conveyor, and mechanisms controlled by said operating mechanism for operating said machine and said device, respectively, during operation of said operating mechanism only.

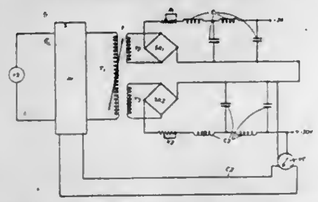
2,474,252
COMBINATION CHAIR AND TABLE UNIT
Margaret C. Ivory, Massillon, Ohio
Application June 18, 1945, Serial No. 600,061
5 Claims. (Cl. 155—124)

1. In a device of the character described, a table top, a plurality of legs pivotally secured to the underside of said table top, and a plurality of collapsible chairs pivotally secured to the underside of said top and adapted to fold between said legs, the securing means including a pair of pivotally connected links, the opposite ends of said links being secured to said chairs and said table top, respectively, the end of said link secured to said table top being mounted on a sleeve, and a rod secured to the underside of said table top on which said sleeve is adapted to slide.



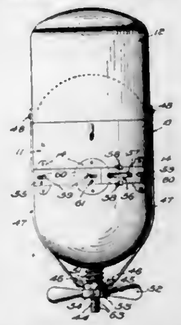
2,474,253
MEANS FOR MEASURING DIFFERENCE IN FREQUENCY OF ALTERNATING CURRENTS
Bent Bulow Jacobsen, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application February 24, 1944, Serial No. 523,660
In Great Britain April 1, 1943
23 Claims. (Cl. 172—245)

1. In an electrical measuring circuit, a first A. C. source of one frequency, a second A. C.



source of a frequency to be compared with the first frequency, means for modulating the first by the second of said frequencies, comprising two modulating branches, means for applying said two sources to each of said two branches, and means for combining the outputs of the two modulating branches to obtain a lower sideband from one pair of output terminals when the frequency difference has one sign, and from the other pair of output terminals when the frequency difference has the other sign.

2,474,254
MACHINE FOR IMPREGNATING MATERIAL WITH LIQUIDS
Leroy A. Kauffman, Washington, D. C.
Application November 18, 1946, Serial No. 710,551
4 Claims. (Cl. 91—12)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

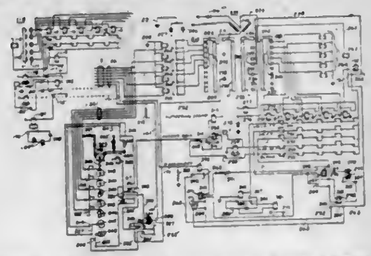


1. A machine for impregnating material with liquids, comprising, a head having an elongated gear pump cavity in its lower portion, a flat base, there being a slot in the bottom of said cavity, opening through said base, a pair of spaced parallel shafts journaled in said cavity, a first set of axially spaced gears fixed on one said shaft, a second set of axially spaced gears fixed on the other said shaft, each gear of one set meshing with a corresponding gear of the other set, a pair of complementary bearing sections fitting in the space between each pair of intermeshing gears and the next axially spaced pair, said sections being shaped to closely fit the cross sectional area of said cavity, and means forming a liquid reservoir above said cavity, there being a passageway from the bottom of said reservoir to the top of said cavity.

2,474,255
POWER SUPPLY SYSTEM FOR CARRIER COMMUNICATION SYSTEMS
Richard Kelly, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application February 27, 1945, Serial No. 579,991
In Great Britain March 10, 1944
2 Claims. (Cl. 171—97)

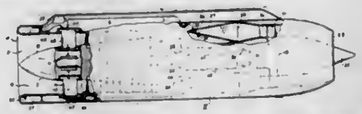
1. Power supply device for telecommunication systems and the like using thermionic valves and deriving energy from an alternating current power supply source including a primary winding connected to said alternating current supply source and having two secondary windings, two rectifiers, each connected to one secondary winding, a low tension load circuit and a high tension load circuit for said thermionic valves connected respectively one to each of said rectifiers, a control relay connected to at least one of said load circuits and responsive to voltage changes therein, transformer control means for varying the effective turns of said primary winding connected to and operable by said control relay whereby changes in the load circuit to which the control relay is connected will cause changes in said transformer primary thereby causing corresponding voltage changes in both said secondary windings and means for matching the voltage current characteristics of the low tension and high tension load circuits over the operating load range so that the output voltages on the low tension and high tension load circuits will bear the same ratio to each other during all variations of the load in said load circuits over said operating load range.

2,474,256
AERIAL BOMB
Richard L. Kinion, Denver, Colo.
Application March 30, 1945, Serial No. 585,760
6 Claims. (Cl. 102—4)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



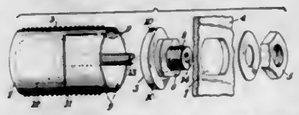
1. In an aerial bomb, a closed casing, a detachable cover adapted to form with said casing a closed chamber, a parachute in said chamber attached to said casing, an explosive charge in said casing, a plurality of fuzes within said casing, each operable to detonate said charge, each said fuze including a firing pin means projecting externally of said casing, an expansible ring member disposed about said casing and engaging all said firing pin means to retain the same in unarmed position when contracted and to permit movement of all said firing pin means to armed position when expanded, releasable means holding said casing and cover in assembled relation and said ring member in contracted position, and means responsive to motion of said bomb through the air to release said releasable means.

2,474,257
TELEGRAPHIC COMMUNICATION SYSTEM WITH AUTOMATIC ANSWER BACK AND ALARM SIGNALS
Edward E. Kleinschmidt, Miami Beach, Fla.
Application December 24, 1943, Serial No. 515,562
36 Claims. (Cl. 178—4)



1. In a system of telegraphic communication, signal transmitting and receiving apparatus, said

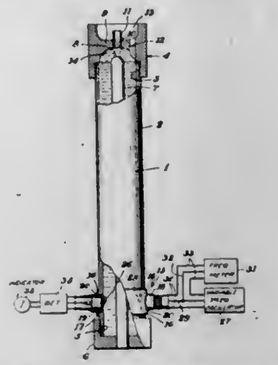
transmitting apparatus including means to transmit a variable group of word signals and message end signals; and means responsive to the transmission of a message end signal to automatically disable the transmitting apparatus and



prevent the further transmission of messages and means controlled by the receiving apparatus and automatically responsive to the reception of a message end signal to condition the transmitting apparatus for message transmission.

2,474,258
TURBINE APPARATUS
Reinout P. Kroon, Swarthmore, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 3, 1946, Serial No. 638,794
2 Claims. (Cl. 230—207)

1. In an aircraft gas turbine power plant including an axial flow compressor having its inlet open to the atmosphere approximately in the direction of flight and comprising a rotor, a stator, a bearing for said rotor near the forward end thereof, a housing for said bearing, a plurality of axially spaced rows of moving blades carried by the rotor, a plurality of rows of stationary blades carried by the stator and disposed between the rows of moving blades, a row of stationary vanes extending generally radially between said bearing housing and the stator upstream of the first row of moving blades for supporting the bearing housing from the stator and for guiding entering air to the first row of moving blades, and means for heating said vanes to prevent formation of ice thereon.

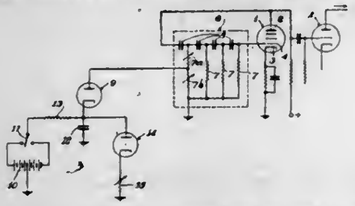


2,474,259
COIL SUPPORTING MEANS
Edmund F. Lapham, Jr., Norwell, Mass., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application February 12, 1945, Serial No. 577,489
5 Claims. (Cl. 171—777)

1. Means for securing a hollow, cylindrical member to a support comprising a frame having

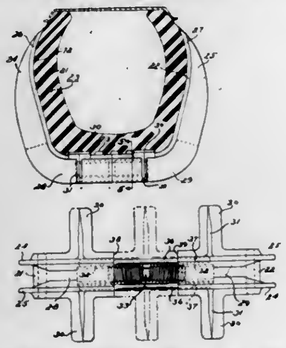
an opening therein smaller than the diameter of said member, a supporting member, said cylindrical member having openings in its periphery adjacent one end thereof, said supporting member having a portion in peripheral engagement with said cylindrical member intermediate the ends thereof and having openings in said portion in alignment with the openings in said cylindrical member, said supporting member having another portion adapted to extend through the opening in said frame, a resilient key member insertable through the aligned openings in said cylindrical member and said supporting member and means adjustable longitudinally of said cylindrical member to secure the portion of said supporting member extending through the opening in said frame for causing said cylindrical member to abut against said frame whereby said key member is distorted.

2,474,260
DIELECTRIC MEASURING APPARATUS AND METHOD
George R. Leef, East Orange, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application January 11, 1947, Serial No. 721,606
2 Claims. (Cl. 175—183)



1. A cell for measuring the electrical properties of liquid dielectrics at ultra-high frequencies, comprising a hollow tubular column, said column being closed at the base and having extending upwardly therein from the base a concentrically located rod, and having at the top a cap provided with an outlet vent and a filling vent, the upper end of said rod being rounded, and in proximity to said cap, said cap having a horizontal portion rounded to conform with and spaced from the rounded end of the rod to form a capacity therewith.

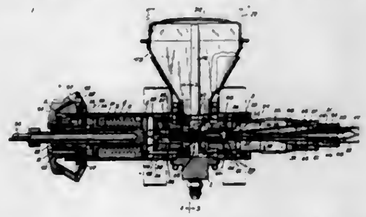
2,474,261
MODULATOR
Frank A. Leibe, Quakertown, Pa., and Benjamin B. Mahler, Newark, N. J., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application May 10, 1947, Serial No. 747,214
12 Claims. (Cl. 332—29)



1. A signalling system comprising an oscillator having a frequency determining circuit, a resistor in said circuit, a diode and a condenser connected in series across said resistor, a source of positive

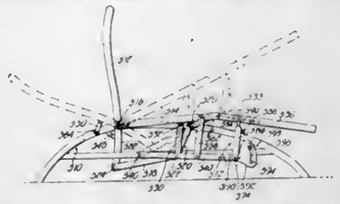
and negative voltages connected to the junction of said diode and condenser, and a switch oper-

able at signal frequency selectively applying said positive and negative voltages to said junction.



2,474,262
TRACTION-GAINING DEVICE
Emil Linderme, Shaker Heights, Ohio, assignor of one-third to Emil M. Linderme, one-third to Edwin G. Linderme, and one-third to Frederick W. Linderme
Application December 11, 1946, Serial No. 715,492
8 Claims. (Cl. 152—227)

1. A traction gaining device for use with a substantially annular body adapted to tractionally move relative to a surface, said body having two opposite substantially annular side surfaces with a substantially annular surface bearing portion therebetween, said traction gaining device comprising first and second side arms each having first and second ends, respectively, said first ends each having a surface adapted to be drawn toward each other to engage at least a part of said opposite body side surfaces, a bearing head at each of said second ends, transverse support means disposed externally of said surface bearing portion and adapted to slidably engage said bearing heads, and anchoring means for drawing said surfaces of said first ends into contact engagement with said at least a part of said opposite body side surfaces.

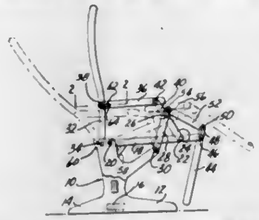


2,474,263
CATHODE SUPPORT
Charles V. Litton, Redwood City, Calif., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application November 1, 1945, Serial No. 626,132
8 Claims. (Cl. 250—27.5)

1. Supporting means for a cathode for an electron discharge device comprising a first conoidal body mutilated at the apex to provide an essentially semicircular end and having an annular base end, a second conidal body arranged coaxially with said first conidal body and also mutilated at the apex to provide a similar essentially semicircular end and forming with said first

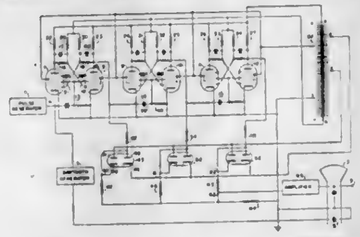
mentioned arcuate end a circle, said second conoidal body having an annular base end, and mounting means comprising separate conducting portions and an insulating portion therebetween, said conducting portions each mounting a base end.

2,474,264
ADJUSTABLE SEAT STRUCTURE
Anton Lorenz, Buffalo, N. Y.
Application October 27, 1944, Serial No. 560,553
11 Claims. (Cl. 155—45)



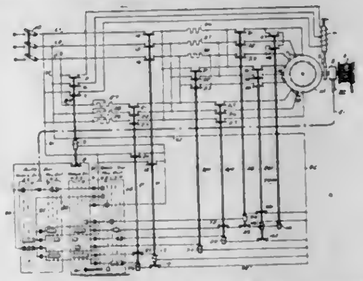
3. A reclining article of furniture comprising: a support, a structure including a seat, a back-rest and means connecting said back-rest with said seat for controlling movements of the back-rest and the seat in dependence on each other, said structure being swingably mounted on said support, stopping means arranged on said support for limiting the sitting position of said structure, a leg-rest pivotally connected with the front portion of said seat, a controlling link pivoted to said support at one of its ends, a guiding member, one end of said guiding member being pivoted to said seat, the other end of said guiding member being pivoted to an intermediate point of said controlling link, and a controlling member, one end of said controlling member being pivoted to the other end of said controlling link, and the other end of said controlling member being pivoted to said leg-rest.

2,474,265
RECLINING ARTICLE OF FURNITURE
Anton Lorenz, Buffalo, N. Y.
Application August 22, 1946, Serial No. 692,224
5 Claims. (Cl. 155—105)



1. A reclining article of furniture, comprising: a support, a seat, the rear portion of said seat being pivoted to said support, a front link, the lower portion of said front link being pivoted to the front portion of said seat, a connecting link, one end portion of said connecting link being

pivoted to said front link at a point above the pivotal connection between the front link and the seat, the other end portion of said connecting link being pivoted to said support at a point spaced from the pivotal connection between the seat and the support, said seat, said front link, said connecting link and the stationary portion of the support between the pivotal connections of the connecting link with the support and of the seat with the support forming the links of a four-bar



link-mechanism, a back-rest, said back-rest being pivoted to said support at a point spaced from the pivotal connection between the seat and the support, and a top link, the rear portion of said top link being pivoted to an intermediate point of said back-rest above the pivotal connection between the back-rest and the support, and the front portion of said top link being pivoted to a point of the front link spaced from its pivotal connection with the connecting link.

2,474,266
STEP WAVE GENERATOR
Harold Lyons, Washington, D. C.
Application May 22, 1945, Serial No. 595,221
7 Claims. (Cl. 315—24)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

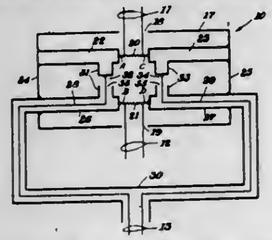
1. The combination of, a counter circuit which is comprised of a plurality of stages arranged to form a counter of the scale of N variety, each of said stages being of the scale of two type, separate impedance means connecting a predetermined point in each of said counter stages to a common junction point, the predetermined point in each of said counter stages being one which alternates between two distinct voltage levels as the counter stages are caused to change electrical states, and a single impedance means connecting said junction point to a point of fixed potential, each of said impedance means being predeterminedly related in magnitude, with the magnitude of the impedance means connecting the first stage of the counter to said junction point being arbitrarily chosen and the magnitude of the remaining impedance means connecting each of the succeedent stages of the counter to said junction point being progressively smaller than the impedance means connecting said first stage to said junction point.

2,474,267
ELECTRIC WINCH CONTROL SYSTEM FOR ALTERNATING CURRENTS
Kurt Mahnke, Alden, N. Y., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 28, 1948, Serial No. 12,097
7 Claims. (Cl. 318—6)

7. An electric winch control system, comprising a multi-speed alternating-current winch motor having a plurality of terminal groups for operating at different speeds respectively, alternating-current supply leads, a plurality of contactors disposed between said leads and said respective terminal groups, reversing relay means disposed between said contactors and said leads for controlling the running direction of said motor, a selector switch having an off position and two groups of active positions on both respective sides of said off position, a tensiometric device associated with said motor and having a reversibly movable element connected to said switch for positioning said switch, a brake associated with said motor, a brake relay disposed for controlling said brake and having a normally open self-holding circuit, said switch having contact means connected through said self-holding circuit to said contactors and to said reversing relay means and disposed for controlling said contactors and relay means when said self-holding contact is closed, to connect one of said respective terminals at a time to said leads so that said motor runs in a direction determined by the selected group of contacts, said switch having other contact means connected with said brake relay and disposed to energize said brake relay when said switch is in an active position other than those immediately adjacent to said off position so that said brake is released and said motor energized only when said switch has passed from the off position through an adjacent position but remains released and energized, due to said self-holding circuit, when thereafter said switch turns back to the adjacent position until it reaches the off position.

2,474,268
RADIO-FREQUENCY IN-PHASE INDICATOR
Nathan Marchand, New York, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application July 3, 1945, Serial No. 602,951
9 Claims. (Cl. 172—245)

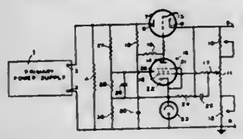
1. An in-phase indicator for producing a substantially zero output when the voltages applied



thereto from two sources are equal and in phase,

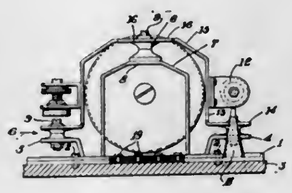
2,474,270
SUPPORT FOR VOLTAGE REGULATORS

2,474,272
COAXIAL LINE TERMINATION



2,474,274
SKI PRESS
Casper M. O'Neill, Salt Lake City, Utah

thereto from two sources are equal and in phase, and a substantial output when said voltages differ from said relationship comprising a pair of dual transmission lines coupling said sources to said indicator, a pair of impedance-matching resistances each terminating one of said lines, a pair of shorted dual transmission line sections each substantially electrically a quarter wavelength long at the mean operating frequency and each comprising two conductors, the two conductors of one section being connected at their free ends

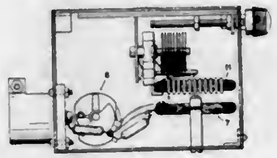


to separate ones of corresponding points of the resistances, the two conductors of the other section being connected at their free ends to separate ones of corresponding other points of the resistances, one conductor of each section being in the form of a coaxial line having an inner conductor connected at one end thereof to the other conductor of the same section, means merging the other ends of said coaxial line conductors into a transmission output line indicating means coupled to said output line.

2,474,269
POWER SUPPLY REGULATOR SYSTEM
Clement Martinez, New York, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application January 25, 1946, Serial No. 643,406
2 Claims. (Cl. 323—30)

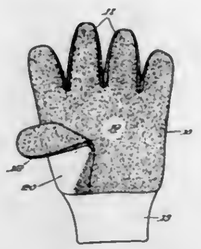
1. A voltage regulator circuit of the resistor tube type for use with a unidirectional voltage source having a supply and an output circuit, comprising a resistor tube having an anode, a grid and a cathode in said supply circuit for regulating the voltage therein; a control amplifier tube having an anode, a screen grid, a control grid and a cathode, bridged with a series resistance across said supply circuit, means for applying the anode circuit voltage of said amplifier to said resistor tube grid, means for applying to said control grid a proportion of the voltage across said output circuit comprising a resistance thereacross, an impedance network comprising a resistance and a condenser across said supply circuit for supplying therefrom control voltage to said amplifier screen grid and cathode and suitable phase correction to said screen grid respecting said cathode, whereby said screen grid acts as an additional control and substantially complete compensation is obtained for a range of voltage fluctuations.

2,474,270
SUPPORT FOR VOLTAGE REGULATORS
Warren S. Master, Rutherford, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application October 16, 1944, Serial No. 558,926
1 Claim. (Cl. 322—100)



In combination, a controllable power source having a housing, and a voltage regulator unit therefor adapted to be removably attached to said housing, said voltage regulator unit including a base member, a frame resiliently supported on said base member, resilient units of a resonant frequency of less than 10 cycles per second for support of said frame, and electrical components including a rectifier carried by said frame, spring contacts carried by and projecting beneath said base member, corresponding contact members carried by said housing and cooperating with said projecting contacts to electrically interconnect said voltage regulator unit with said power source when said voltage regulator unit is attached to the housing, said housing and said base member having connecting openings positioned beneath said rectifier, and a duct carried by the said base member adjacent to the said rectifier and arranged above an opening of the latter, whereby cooling air expelled from the inside of said housing is directed through said opening, into the said duct and against said rectifier, and means for removably attaching said base to the said housing.

2,474,271
METHOD FOR PROTECTION OF OBJECTS
Harold F. Meyer, Haddonfield, N. J.
No Drawing. Application May 31, 1945, Serial No. 596,950
2 Claims. (Cl. 250—83.6)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

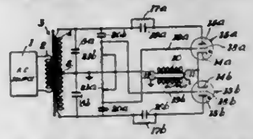


1. A method of protecting against unauthorized removal from a designated location an object to be protected, comprising the steps of: adding to such object radioactive material which is distinguished in the nature of its radiation from radioactive materials normally carried by a person; providing at least one path for removal of the object from such location; restricting the removal of the object to such paths; indicating the presence of the added radioactive material therewith as the object moves along such restricted path; distinguishing between radiations of radioactive material present on an item normally carried by a person and the radiations of the said material added to the object to be protected, and operating a means to prevent removal of the object in response to radiations of said added material when the object is at a part of said path remote from said designated location.

2,474,272
COAXIAL LINE TERMINATION
Henry G. Nordlin, East Orange, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application June 25, 1945, Serial No. 601,395
7 Claims. (Cl. 178—44)

2. A network adapted for terminating an ultra-high frequency coaxial line whose characteristic impedance at a given operating frequency is substantially a pure resistance, said network comprising a primary circuit and a secondary circuit, the primary circuit comprising an inductive loop in series with an adjustable condenser and being adapted for terminating the line, the secondary circuit comprising an inductive loop closed through an adjustable condenser, grounded shielding means around each of the loops to protect the loops against stray capacitive couplings, the two loops lying in planes which are substantially parallel to each other and being inductively related, the loop and condenser of one circuit being movable relative to the loop and condenser of the other circuit in the plane of the movable loop.

2,474,273
FABRIC REINFORCEMENT
Raymond G. Olson, Niles, Ill.
Application March 7, 1946, Serial No. 652,585
14 Claims. (Cl. 2—167)



5. A method of reenforcing the wearing surfaces of a fabric glove comprising the steps of spraying the palm and finger portions with minute particles of a fused metal, said metal having the normal characteristic of being relatively flexible, and spraying the same glove portions with minute particles of a fused metal, said metal having the normal characteristic of being relatively abrasive resistant, whereby the fabric glove retains its flexibility and has a good wearing surface due to the flexible metal enclosing and adhering to the threads on the glove surface and the abrasive resistant metal adhering to the flexible metal.

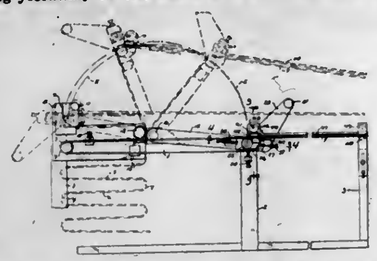
2,474,274
SKI PRESS
George M. O'Neill, Salt Lake City, Utah
Application September 9, 1947, Serial No. 772,981
1 Claim. (Cl. 280—11.37)

A ski press comprising a single longitudinal base member having a plurality of spaced cross members attached intermediate their ends to said longitudinal base member to retain the front ends and center of a pair of skies raised with respect to the rear ends and the region of the skis between the center and front ends.

2,474,275
PULSE GENERATING SYSTEM
Evert Manuel Ostlund, Montclair, N. J., and Paul Walter Sokoloff, Forest Hills, N. Y., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application September 21, 1945, Serial No. 617,876
10 Claims. (Cl. 171—97)

1. A system for generating high voltage pulses from a source of low voltage alternating current comprising a gas discharge tube having an anode, a cathode and a control electrode, a control circuit including said cathode and said control electrode, an output circuit including said cathode and said anode, a first impedance, means connecting one of said circuits across said first impedance, means for building up across said first impedance a voltage substantially in phase with that of said source, a second impedance, means connecting the other of said circuits across said second impedance, means for building up across said second impedance a voltage out of phase with that of said source, and means for deriving the said pulses from the current flowing in said output circuit.

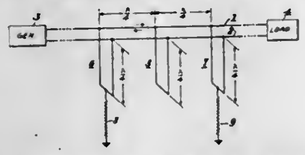
2,474,276
APPARATUS FOR MAKING SINUOUS BENDS IN LONG WORKPIECES
Arthur W. Payne, Detroit, Mich., assignor to Bundy Tubing Company, Detroit, Mich., a corporation of Michigan
Application May 8, 1947, Serial No. 746,706
11 Claims. (Cl. 153—40)



1. An apparatus for shaping stock of elongated form, such as tube, into coils of serpentine form having a succession of reverse bends, comprising a fixed arbor, a movable member mounted to move about the fixed arbor, a yieldably mounted arbor on said member, means for anchoring the stock on one side of the fixed arbor, a clamp on said member for clamping the stock on the side of the yieldably mounted arbor opposite the fixed arbor, said clamp being yieldably mounted for yieldable shift in unison with the yieldably mounted arbor, and means for moving said member about the fixed arbor to bend the stock around the said two arbors with the

also means for adjusting said third oscillator to

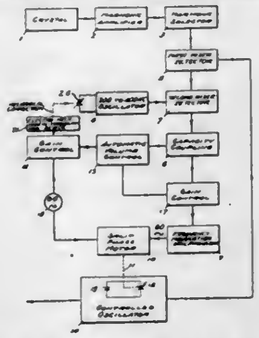
mounted intermediate of its ends directly on said first lever at a point thereon spaced from its



tion of the first cut but terminating short thereof, whereby to define opposed legs at the sides of the

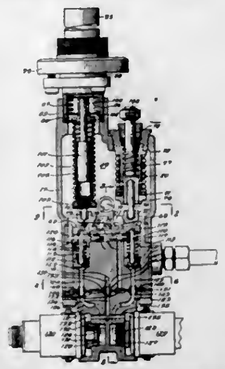
arbor on the said member and the clamp shifting yieldably on the member to accommodate the

take-up in the stock incident to the wrapping of the stock around the arbors.



2,474,277
TRANSMISSION LINE
Sidney B. Pickles, Jackson Heights, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application March 19, 1945, Serial No. 583,406
6 Claims. (Cl. 178—44)

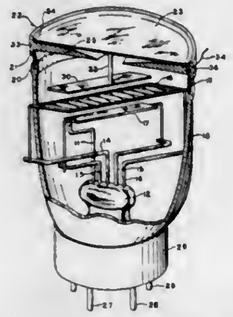
1. In combination, a balanced wave transmission line having a building-out section connected thereto in the form of a quarter-wave short-circuited transmission line section, and at least one other quarter-wave transmission line section connected to said wave balanced transmission line adjacent the first-mentioned section and located an odd number of quarter-wave lengths from said building-out section, the short-circuited end of said other section being connected to a dissipating impedance, the other end of which is connected to a point of neutral potential.



2,474,278
FREQUENCY MODULATED OSCILLATOR CONTROL
Richard H. Ranger, United States Army, Newark, N. J.
Application October 2, 1944, Serial No. 556,815
17 Claims. (Cl. 250—36)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. Means for maintaining constant the output frequency of an oscillator, said means comprising a controlled oscillator whose output frequency is to be maintained constant, an adjustable part of said oscillator whose adjustment varies the output frequency thereof, a split phase motor joined to said part so that said motor and said part move together, a source of relatively low frequencies, a second oscillator having a relatively constant output frequency which normally has a predetermined difference from the frequency of the controlled oscillator, a third oscillator including a movable part controlled by said source and whose movements cause frequency-modulation of said third oscillator and including also means for adjusting said third oscillator to have a mean frequency which is equal to the above predetermined difference, an electric circuit connection between said source and said motor, an electric circuit connection between all three oscillators and said motor, whereby said

motor moves said adjustable part and thereby corrects the frequency of said controlled oscillator in accordance with whether or not the difference between the output frequency of said controlled oscillator and of said second oscillator is above or below that of said third oscillator.



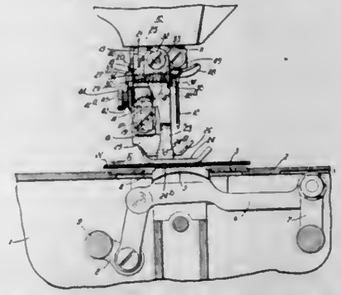
2,474,279
FOLLOW-UP SERVOMOTOR
William A. Ray, Los Angeles, Calif., assignor to General Controls Co., a corporation
Original application May 5, 1942, Serial No. 441,773, now Patent No. 2,364,659, December 12, 1944. Divided and this application November 7, 1944, Serial No. 562,337
7 Claims. (Cl. 121—41)

1. In a system for adjusting the position of a member; a motor for operating said member and capable of moving it in opposite directions; a first lever pivoted for movement through a small angle; means operated by the movement of said first lever in opposite directions for so controlling the operation of said motor that said member is correspondingly moved in opposite directions, said first lever having a neutral position wherein said motor is unoperated; a second lever pivotally

mounted intermediate of its ends directly on said first lever at a point thereon spaced from its pivot; means movable in a rectilinear path in response to change in a controlling condition and directly engageable with one end of said second lever; stop means engageable by the other end of said second lever; means biasing said first lever in a direction such that the ends of said second lever are urged into engagement, respectively, with said condition responsive moving means and with said stop means, movement of said condition-responsive moving means thus being effective to rock said second lever about said stop means as a fulcrum and thereby rock said first lever from its neutral position; and means operated by the resultant movement of said member for so adjusting the position of said stop means that said first lever is restored to its neutral position by said bias.

2,474,280
PIEZOMETRIC THERMIONIC TUBE
Jerome Rothstein, Belmar, N. J.
Application April 22, 1946, Serial No. 663,855
14 Claims. (Cl. 250—27.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

14. A piezometric tube comprising a degassed vessel, a plurality of electrodes in said vessel, a pressure-responsive member forming a portion of the outer wall of said vessel, a connection between said member and one of said electrodes for varying the thermionic current in said tube in response to the variation in said pressure, and a mechanical member capable of engaging said pressure-responsive member only after a predetermined change in said pressure for varying the sensitivity of said pressure-responsive member with the change in said pressure and for varying the pressure-response characteristic of said tube.

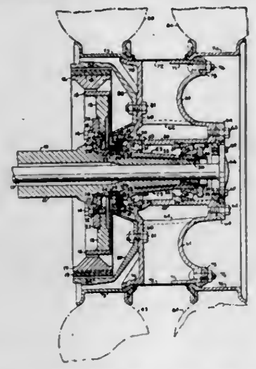


2,474,281
RAILROAD SPIKE
Ramon A. Ruiz, Habana, Cuba, assignor of sixty per cent to Gennaro Giudice, Brooklyn, N. Y.
Application August 27, 1947, Serial No. 770,894
In Cuba February 12, 1947
1 Claim. (Cl. 85—26)

In a spike, a shank having opposed cuts formed therein one of said cuts having an angular lower portion and an upper portion extended along a line drawn substantially centrally and longitudinally through the shank, the other cut being angularly extended, and opposing the angular portion of the first cut but terminating short thereof, whereby to define opposed legs at the sides of the

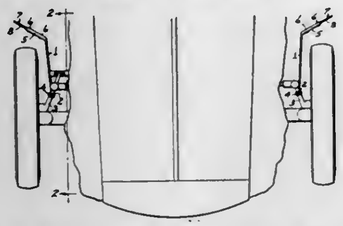
shank, and a wedge between and integrally connected to one of the legs.

2,474,282
TOP FEED AND ALTERNATING PRESSER ATTACHMENT FOR SEWING MACHINES
Rudolph J. Sailer, Townley, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application November 7, 1947, Serial No. 784,596
6 Claims. (Cl. 112—212)



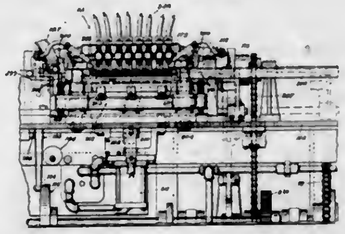
1. An attachment of the class described, comprising a supporting frame adapted to be secured to the presser-bar of a sewing machine and having spaced vertically disposed walls; a feeding member horizontally pivoted on one of said walls; a presser-member slidingly mounted on the other of said walls for vertical movement; a bracket secured to said frame; a spring mounted on said bracket and engaging said presser-member and urging it upwardly; a needle-bar-actuated arm pivoted to said bracket and engaging a portion of said presser-member to force it downwardly in opposition to said spring; and a second spring interposed between said bracket and said feeding member and normally urging said feeding member forwardly.

2,474,283
WHEEL MOUNTING IN VEHICLES
Isaac W. Simpkins, Charlotte, N. C.
Application January 2, 1948, Serial No. 33
7 Claims. (Cl. 301—128)



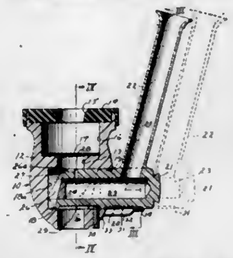
1. In a vehicle having an axle housing provided with a peripheral flange, the exterior of the axle housing being tapered outwardly in a stepped manner to provide one or more shoulders thereon,

the axle housing being exteriorly threaded at its outer end, a sleeve member disposed over that portion of the axle housing occurring between the peripheral flange and the end of the axle, and extending beyond the end of the axle housing and having a peripheral flange adapted to be secured to the peripheral flange on the axle housing and being adapted to receive roller bearings on its exterior, a wheel having a hub portion encircling said sleeve and mounted on said



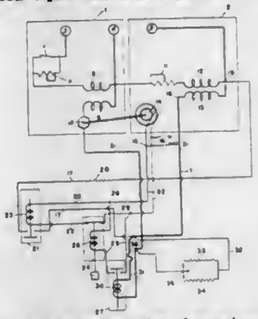
roller bearings, the exterior of the hub portion having an annular member secured thereto whose inner diameter is less than the inner diameter of the hub portion, an axle mounted in the axle housing and having a disk-like member integral with the outer end thereof and a plurality of screws penetrating the disk-like member on the end of the axle and being threadably mounted in the last-named annular member for securing the axle to the hub member of the wheel.

2,474,284
TIRE GUARD
Guy L. Smith, Cumberland, Md.
Application January 23, 1947, Serial No. 723,702
1 Claim. (Cl. 280—160)



In a deflector for a motor vehicle, an arm, a clamp rigid with the arm at one end thereof and disposed at an angle to the arm, said clamp adapted to be attached to a steering arm, a channel rigid with the other end of the arm, said channel being disposed at an angle to the arm to extend outwardly of the arm when said clamp is attached to said steering arm, a flexible sheet fixed to the channel, said channel extending from the inner edge of the sheet to substantially the vertical center of the sheet, said sheet due to the angularity of the channel is arranged at an angle to the line of travel of the vehicle with the sheet being directed outwardly and rearwardly and not extending beyond the outer edge of the vehicle.

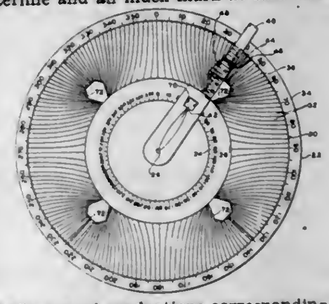
2,474,285
BANK STRIP WELDING MACHINE
William Francis Smith, Brooklyn, N. Y., assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application February 11, 1947, Serial No. 727,802
27 Claims. (Cl. 219—4)



1. Apparatus for welding longitudinal wires to transverse selector pins in successive insulating bank strip bodies with successive crossover points between said wires and pins disposed in paths extending diagonally with respect to the length of said wires, comprising means for feeding parallel multiplying wires by steps at least as great as the length of a bank strip body, and welding means through which said wires are fed for welding said wires to pins of successive bank strip bodies at selected crossings during dwell intervals of the wire feed, said welding means including welding electrodes arranged in a plurality of sets spaced along the length of said wires, and means to move said electrodes as a unit in a step-by-step movement along said diagonal paths to register successively with said crossover points.

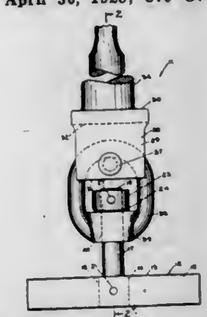
2,474,286
BUBBLE FOUNTAIN DEVICE
Leland H. Snyder, Chicago, Ill., assignor, by mesne assignments, to Quality Appliances, Inc., Chicago, Ill., a corporation of Illinois
Application March 26, 1945, Serial No. 584,825
12 Claims. (Cl. 137—111)

1. A device comprising a fitting adapted to be attached to a fluid outlet and having a fluid flow passage extending therethrough, a hollow cylindrical valve extending transversely of said passage and slidable therein to close or open said passage and a spout movable with said valve and connected to the interior thereof to divert fluid from said passage when the same is closed by said valve.



2,474,287
VOLTAGE REGULATOR
Gerald B. Steincross, Long Beach, Calif.
Application September 4, 1945, Serial No. 614,327
2 Claims. (Cl. 322—18)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In an apparatus of the character described including a motor generator set, the motor of which is provided with a series field and the generator of which is provided with a compounding field; a shunt circuit across said compounding field including a shunt resistor and a shunt relay connected in series, the shunt relay being set to maintain said shunt circuit closed in response to approximately normal voltage of said generator; an operating circuit for said shunt relay including a time delay relay connected in series with the actuating element of said shunt relay between the output terminals of said generator, the time delay relay being adjusted to open the shunt relay operating circuit after the lapse of a predetermined time period after the energization of said time delay relay; an operating circuit for said time delay relay comprising a current relay connected in series with the actuating element of the time delay relay across the output terminals of said generator, said current relay being adjusted to close said time delay relay operating circuit when the current flowing through the actuating element of said current relay exceeds a predetermined magnitude; and an operating circuit for said current relay connecting the actuating element thereof in series with the armature and series field of said motor and the compounding field of said generator; whereby said shunt circuit is opened a predetermined time after the load on said generator exceeds a predetermined magnitude.

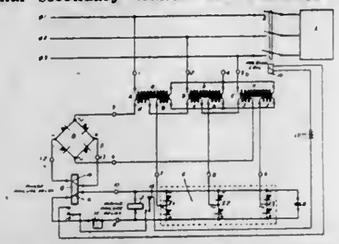


2,474,288
OCTANTAL ERROR CALCULATOR
Gilbert Swift, Tulsa, Okla., and Charles B. Moore, Elberon, N. J.
Application July 7, 1945, Serial No. 603,738
10 Claims. (Cl. 235—83)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

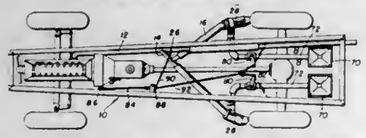
1. A calculating device for indicating true azimuthal angles in radio direction receiving apparatus for radio waves having deflection errors, comprising a dial provided with a graduated circle for measuring indicated bearing angles, curves on said dial having angular variation progressively and proportional to true constant bearings for corresponding indicated bearing corrections and frequency; means identifying the bearing values of said curves; a pointer arm pivotally mounted at the center of said dial, said pointer having a centerline and an index mark at said circle and

radially spaced graduations corresponding to respective frequency values at their intersections with said dial curves.

2,474,289
JIG FOR SWIVEL LINKS
Catalino G. Tago, Brooklyn, N. Y.
Application August 13, 1946, Serial No. 690,199
2 Claims. (Cl. 90—12)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A jig for use in tooling a swivel link having a swivel-axis bore through one end, said jig comprising a shank for extending in axial and rotary sliding movement through the link bore, a tool fixedly mounted on the end of the shank extending into the link, said tool facing the link at the inner end of the link bore, means for supporting the end of the link opposite to the bore end, and means for locking the supporting means and link together for rotational movement.

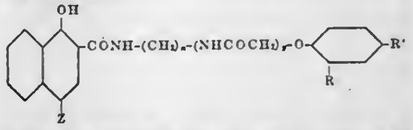


2,474,290
PHASE FAILURE INDICATING DEVICE FOR POLYPHASE SYSTEMS
Victor John Terry and Richard Kelly, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application November 2, 1944, Serial No. 561,620
In Great Britain October 26, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires October 26, 1963
5 Claims. (Cl. 175—294)

1. A voltage operated phase failure indicating arrangement for a three phase electric power supply circuit comprising, three primary transformer windings connected in star formation and

in shunt to each phase of the supply circuit, three corresponding secondary windings adapted to generate voltages at the third harmonic of the supply frequency, a local circuit including a phase failure relay, means for applying said third harmonic voltages to said local circuit, three additional secondary transformer windings corresponding respectively to said first mentioned secondary windings and connected to produce a resultant voltage at the fundamental frequency and means for applying the voltage from said additional windings to said local circuit whereby said relay is operated upon phase failure of said supply circuit, further comprising a mains failure relay and means for applying said resultant voltage to operate said mains failure relay upon failure of at least two of the phases.

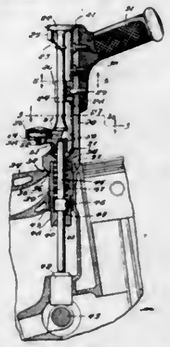
2,474,291
ANTISKID DEVICE
Alva F. Warden, Gary, and Lloyd A. Harry, Crown Point, Ind.
Application April 9, 1947, Serial No. 740,378
3 Claims. (Cl. 291—16)



1. An anti-skid device comprising a vehicle chassis, an exhaust pipe secured thereto, a conduit secured to said exhaust pipe, a branch conduit communicating with said conduit, means for retaining abrasive material communicating with said conduits, valve means associated with said retaining means and said conduit, common means for actuating all of said valve means, means for resiliently urging said valve means in a closed position, a muffler sleeve mounted at the ends of said conduit and branch conduit, pressure responsive valves disposed in said muffler sleeves, said common means comprising a plurality of cables journaled on said chassis, said cables terminating in a single master draw cable.

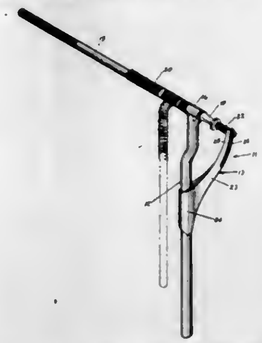
2,474,292
ADHESIVE TAPE FOR LAMINATING
Charles L. Weidner, New Brunswick, and Laszlo Walter Eger, Perth Amboy, N. J., assignors to Industrial Tape Corporation, a corporation of New Jersey
No Drawing. Application August 13, 1943, Serial No. 498,594
3 Claims. (Cl. 117—122)

1. For use in laminating plywood material, a laminating tape comprising a flexible fibrous backing impregnated throughout with an adhesive mixture which includes a major portion on a dry weight basis of a partially reacted water soluble resin selected from the group consisting of partially reacted phenol-aldehydes, urea-aldehydes, and melamine-aldehydes, a minor portion of a water soluble film-forming material for imparting internal strength and augmenting adhesiveness selected from the group consisting of high polymeric cellulose derivatives, vinyl esters, and vinyl alcohols, and a minor portion, exceeding by weight the weight of said film-forming material in the composition, of a humectant selected from the group consisting of the glycols, glycerol and lactic acid capable of absorbing moisture from the air to maintain the adhesive constantly activated for immediate use, said resin being heat-settable under the conditions of plywood bonding to enable the tape to become a water-insoluble and shear-resisting section of the finished plywood material.



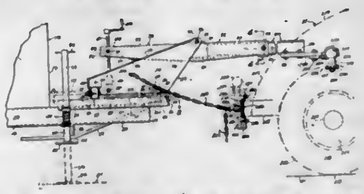
2,474,293
1-NAPHTHOL-2-CARBOXYLIC ACID AMIDE COUPLERS FOR COLOR PHOTOGRAPHY
Arnold Weissberger, Ilmari F. Salminen, and Paul W. Vittum, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application September 10, 1947, Serial No. 773,290
7 Claims. (Cl. 95—6)

1. A photographic emulsion for forming colored images comprising a silver halide emulsion having incorporated therein a coupler compound having the formula:



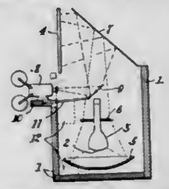
where Z is selected from the class consisting of hydrogen and chlorine, R and R' are alkyl groups of from 1 to 5 carbon atoms, n is an integer from 2 to 4, and y is selected from the class consisting of 0 and 1.

2,474,294
VALVE GAUGE
Norman Orin Weeks, Inglewood, Calif.
Application April 24, 1947, Serial No. 743,483
2 Claims. (Cl. 33—181)



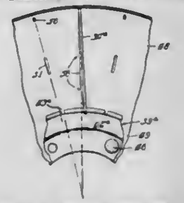
1. A device of the character described, for gauging valves for internal combustion engines having stems, comprising a tubular body member, adapted to receive the stem of the valve, a bevelled seat at the upper end of the body to receive the valve head, a sleeve secured to the lower end of the body, a plunger rod slidable in said sleeve and protruding from the lower end of said sleeve, a spring pressing said plunger rod downwardly and an indicator mounted on said rod externally of said sleeve and laterally of said rod, an operating arm carried by the indicator and extending into the vertical line of the stem, and adapted to engage the stem of said valve and cause the indicator to operate to indicate the proper clearance between the valve head and the seat at the upper end of the body.

2,474,295
SCREW DRIVER
Stephen P. Wheeler, Norristown, Pa.
Application September 10, 1945, Serial No. 615,486
1 Claim. (Cl. 145—50)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



A screw driver comprising a handle having a bearing at one end, a blade having a shank rotatably supported in said bearing and at right angles to said handle and a turning means comprising a knurled shaft operably connected to said shank by means of a coil spring, and a retractable screw holder slidably mounted on said handle and having a pair of flexible prongs adapted to engage the stem of a screw at a point away from the screwhead to support said screw in a position to be operated on by said blade.

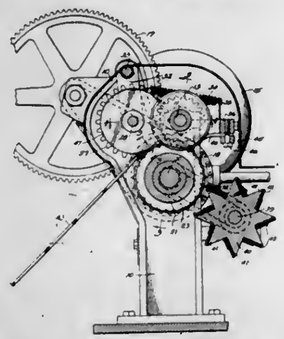
2,474,296
TOWING DEVICE FOR TRAILERS
Duane Wiitsee, Ann Arbor, Mich.
Application January 4, 1946, Serial No. 638,985
19 Claims. (Cl. 280—33.44)



1. A towing device for connecting a trailer to a forward pivot member on a towing vehicle, comprising a support attachable to the trailer, a rearward pivot member mounted on said support, a towing structure pivotally mounted on said rearward pivot member and pivotally connectable to said forward pivot member, mechanism for releasably restraining said rearward pivot member from pivoting operation during turning of the towing vehicle in excess of a predetermined turning radius, and devices responsive to a turning of said towing vehicle through less than said predetermined radius for rendering said forward pivot member ineffective for further pivoting operation while releasing said restraining mechanism to render said rearward pivot member effective for pivoting operation.

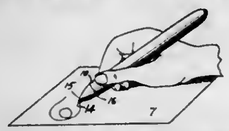
2,474,297
COMBINATION TELEVISION RECEIVER AND PICTURE PROJECTOR
Norman H. Young, Jr., Jackson Heights, N. Y., assignor to Federal Telephone & Radio Corporation, New York, N. Y., a corporation of Delaware
Application January 16, 1946, Serial No. 641,582
4 Claims. (Cl. 88—24)

1. A combination television receiver and motion picture projector, comprising a rear projection television receiver having a cathode ray tube positioned vertically with its fluorescent screen bottommost, a spherical mirror reflecting upward the images from said fluorescent screen, a plane translucent screen mounted vertically, a plane mirror reflecting the image from said spherical mirror to said screen, and a correcting lens positioned between said spherical mirror and said plane mirror; a motion picture projector; means for mounting said projector; and an auxiliary reflecting system located above said cathode ray tube between said correcting lens and said plane mirror and substantially in alignment with the longitudinal axis of said cathode ray tube, said auxiliary reflecting system being directed to reflect light from said projector to said plane mirror.



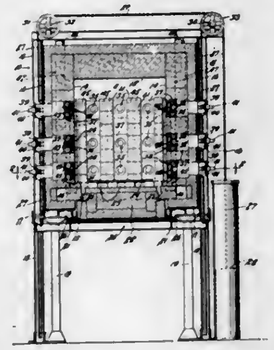
2,474,298
FLUID WHEEL
Reinhold C. Zeidler, Detroit, Mich., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application September 11, 1944, Serial No. 553,525
20 Claims. (Cl. 103—115)

1. A wheel for a fluid coupling comprising a rotatable shell having blade seating means, and a



blade mounted in said means, said blade comprising a flexible normally flat plate, and integral tabs on a margin of said plate, one of said tabs being preformed by being bodily skewed out of alignment with the plate, the reflex action induced by warping the skewed tab in its seat securely anchoring the plate and preventing vibratory movement thereof.

2,474,299
INTESTINE SPLITTING MACHINE
Minton S. Atkisson, Wilmette, and Arthur E. Schneider, Itasca, Ill., assignors to Armour and Company, Chicago, Ill., a corporation of Illinois
Application March 8, 1947, Serial No. 733,328
15 Claims. (Cl. 164—61)

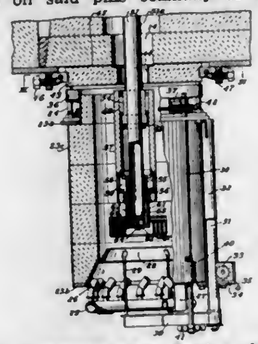


15. In apparatus of the character set forth, a frame, a bed roll rotatably mounted therein and having a circular recess therein, resilient gripping means carried by said bed roll on each side of said recess, a rotary cutter having its cutting edge received in said recess, means for guiding an intestine between said blade and said recess, and spaced feed disks adjustably mounted on a driven shaft and on each side of said rotary cutter, said disks having teeth inclined in the direction of rotation of said disks, said disk being so positioned as to feed material to be cut against said resilient gripping means.

2,474,300
BALL POINT FOUNTAIN PEN
Harald H. Band, Kew Gardens, N. Y.
Application January 9, 1947, Serial No. 720,968
2 Claims. (Cl. 120—42.4)

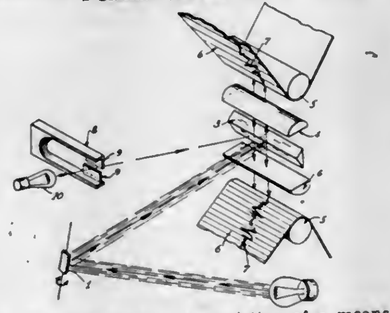
1. In a ball point pen, a handle structure having an ink discharging opening therein and a ball seat, a scribing ball engaging with the ball seat to receive ink from the opening thereof, and said structure having depending lips extending downwardly over the opposite sides of the ball below an equatorial plane of the ball extending transversely through the longitudinal axis of the structure and each of said lip portions having an arched enclosing wall of substantial length but less than the length of a semi-circle whereby to relieve the ball face at the opposite sides of the structure and to permit the low angle use of the pen from two directions.

2,474,301
METHOD OF FIRING THE CHAMBERS OF KILNS
Emil Blaha, Cheltenham, Pa., assignor to Selas Corporation of America, Philadelphia, Pa., a corporation of Pennsylvania
Application April 18, 1946, Serial No. 663,159
15 Claims. (Cl. 25—157)



4. The method of firing the chamber of a kiln which comprises burning a combustible gas mixture at separate vicinities in open communication with the chamber and closely adjacent to a plurality of refractory lined heat radiating regions distributed about the chamber to heat the regions to incandescence, such mixture including a combustible gas and a combustion supporting gas as active constituents thereof, supplying to the vicinities such gas mixture having an excess of one of the active constituents, drawing into the chamber supplementary gas which will produce the desired atmosphere in the chamber and act to further the combustion of the gas mixture upon mixing with said one active constituent, producing a negative pressure in the chamber to cause the supplementary gas to be drawn therein by diverting from the vicinities the gases of the chamber atmosphere adjacent thereto and a substantial fraction of the heated gases generated by said combustion at the vicinities before such heated gases become an active component of the furnace atmosphere, and flowing the diverted gases exteriorly of the chamber in a path of flow which is in thermal exchange relation and out of physical contact with the chamber atmosphere, the supplementary gas being capable of promoting further combustion of the diverted gases in the path of flow.

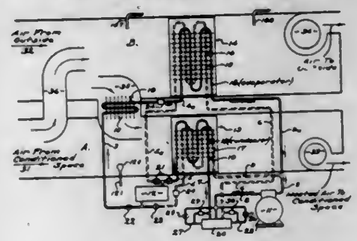
2,474,302
GLASSWARE-FORMING APPARATUS
Edward Danner, Newark, Ohio
Application December 6, 1943, Serial No. 512,996
9 Claims. (Cl. 49—17.1)



1. In glass-forming apparatus, a blow-pipe extending through means for delivering a downwardly flowing stream of molten glass, a member fitting over the lower end of the pipe and supported thereon, pins extending radially from said

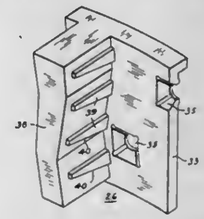
member, and a plurality of spaced coaxial shells mounted on said pins coaxially of said pipe

adapted to receive glass flowing downwardly around said pipe.



2,474,303
OSCILLOGRAPHIC RECORDING APPARATUS
Richard M. Davis, Oklahoma City, Okla., assignor to Standard Oil Development Company, a corporation of Delaware
Application March 13, 1947, Serial No. 734,495
1 Claim. (Cl. 346—33)

A recording apparatus consisting of a means for producing a beam of light oscillating in a fixed plane, an elongated reflector having a cross-section in the form of a triangle arranged in the direct path of said beam of light with its apex in the plane of oscillation of said light beam, a focusing lens arranged on either side of said triangular reflector with its axis parallel with the axis of said triangular reflector and means for passing a sensitized strip through the focal point of each of said focusing lenses in a direction transverse to the direction of oscillation of the light beam passing through said lenses from said reflector, whereby duplicate records are obtained.

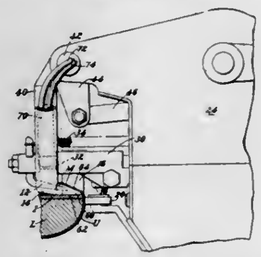


2,474,304
REVERSIBLE CYCLE HEAT PUMP
Gilbert E. Clancy, Los Angeles, Calif., assignor to Drayer-Hanson, Los Angeles, Calif., a copartnership
Application January 28, 1946, Serial No. 643,941
19 Claims. (Cl. 62—6)

1. In a reversible cycle heat pump of the type which includes structure embodying a conditioning passage for fluid to be heated or cooled, another passage for a heat carrying fluid, means for moving a fluid to be heated or cooled through the conditioning passage, means for moving a heat carrying fluid through the other passage, a condenser coil and an evaporator coil positioned in each of the two passages in heat transferring relation to the fluid flowing therein, refrigerant conduit circuiting including two parallel refrigerant circuits each of which includes the condenser coil in one fluid passage and the evaporating coil

in the other fluid passage, and valvularly controlled means for circulating refrigerant selectively through either circuit; the improvement which comprises structure forming an entrance through which a restricted amount of heat carrying fluid is introduced into the conditioning passage from the other passage, a refrigerant subcooling coil in said entrance, and conduit means by which the sub-cooling coil is incorporated in one of the refrigerant circuits between the condenser and the evaporator of that circuit.

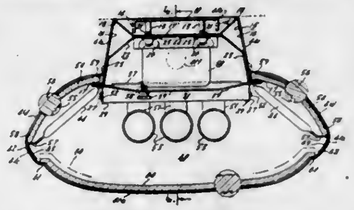
2,474,305
BEATER ELEMENT FOR PULVERIZING APPARATUS
Ollison Craig, Worcester, Mass., assignor to Riley Stoker Corporation, Worcester, Mass., a corporation of Massachusetts
Application April 6, 1945, Serial No. 586,943
2 Claims. (Cl. 241—195)



1. A beater element for a pulverizing apparatus comprising a rotor wear plate shaped as a circular ring sector and having openings therein to facilitate its attachment to a rotor disk, a substantially rectangular flat blade integral with the plate and extending in an approximately radial plane from one face of the plate, the length of the blade (measured radially) being considerably greater than its width, and a series of generally parallel ribs extending from the plate and across the front surface of the blade in directions approximately perpendicular to the plate, the ribs having inner surfaces which lie at obtuse angles with the plate.

2,474,306
CELLULOSIC PRODUCTS
Leonard Doub, Detroit, Mich., assignor to Parke, Davis & Company, Detroit, Mich., a corporation of Michigan
No Drawing. Application February 23, 1945, Serial No. 579,490
6 Claims. (Cl. 260—212)

1. A lyophilic aggregate of independent fibers of a cellulose having a carboxyl content between about 2% and 23% selected from the class consisting of oxidized cellulose and partially neutralized oxidized cellulose, the oxidized cellulose of said fibers being at least partially in the form of its reaction product with a high molecular weight quaternary ammonium salt wetting agent.

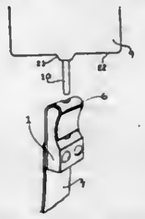


2,474,307
LASTING MACHINE
Joseph Fossa, Salem, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application October 19, 1945, Serial No. 623,289
7 Claims. (Cl. 12—9)

1. In a lasting machine, the combination with a member for engaging the bottom of a shoe adjacent to the edge thereof, means for tensioning stock to be lasted, in different locations progressively along the edge of the shoe bottom, by drawing the lasted margin of the stock in each location inwardly over the shoe-bottom-engaging member and in a direction substantially parallel to the bottom of the shoe, and means operating in time relation to said tensioning means for pressing the overdrawn lasting margin in each location against the bottom of the shoe, of means for applying heat to the lasting margin and shoe-bottom part, during the operation of said tensioning and overdrawing means, to activate adhesive thereon before the lasting margin is pressed against the shoe-bottom part by said pressing means.

2,474,308
SURFACE ATTACHED LIGHTING EQUIPMENT
Kurt Franck and Vearl S. Wince, Newark, Ohio, assignors to Holophane Company, Inc., New York, N. Y., a corporation of Delaware
Application November 29, 1946, Serial No. 713,126
10 Claims. (Cl. 240—51.11)

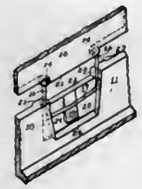
1. Fluorescent lighting equipment for direct and indirect lighting, comprising a fluorescent lamp ballast, an elongated body receiving the ballast and wiring and having longitudinally extending outwardly directed flanges along its lower edges at substantially the level of the bottom of the ballast, a bottom cover for the wireway, lamp sockets supported by the body at its ends, lamps in the sockets and at a level below the bottom cover and flanges, end plates carried by the body outside the sockets, the end plates extending below the lamps and their lower portions being substantially wider than the width of the space occupied by the lamps, longitudinal members interconnecting the end plates and disposed at a



level slightly below that of the lamps, the upper portions of the longitudinal members having inwardly directed flanges and upwardly directed stops outside of and above the flanges, and light transmitting plates resting on the body flanges, the upper inwardly directed flanges and behind the stops.

2,474,309
WEATHER RESISTANT COMPOSITION
Philip Tucker Gidley, Fairhaven, Mass., assignor, by mesne assignments, to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application November 8, 1944, Serial No. 562,571
3 Claims. (Cl. 260—23.7)

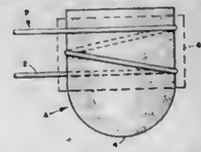
2. A vulcanized composition of matter characterized by superior sunlight resistance and ultimate elongation of at least 480% and a tensile strength of at least 2405 pounds per square inch, said composition consisting of: 100 parts of a rubbery butadiene-acrylonitrile copolymer, mixed homogeneously with a substantially equal amount of a resinous polymer of vinyl acetate; 40 parts of carbon black; 20 parts of dioctyl phthalate; 30 parts of tricresyl phosphate; 10 parts of dibenzyl sebacate; 8 parts of zinc oxide; 2 parts of sulfur; 1.5 parts of benzothiazyl disulfide; 1.5 parts of phenyl beta naphthylamine; 1.5 parts of paraffin wax; 1.5 parts of stearic acid.



2,474,310
ELECTRICAL CONNECTOR
Hallan E. Goldstine and Oswin F. Voigt, Port Jefferson Station, N. Y., assignors to Radio Corporation of America, a corporation of Delaware
Application March 22, 1944, Serial No. 527,596
3 Claims. (Cl. 173—269)

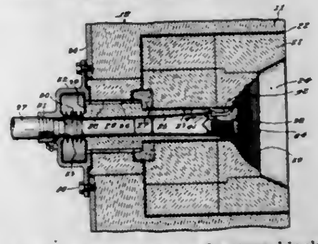
1. An electrical connection device for making connections to the pins of a vacuum tube, com-

prising a body portion having a circular aperture arranged to extend along its length for the passage of one of said pins therethrough, said body portion having located on one of its sides a concaved portion which extends into the zone of said circular aperture, a spring tension device having an aperture therein which is positioned to register with the circular aperture in the body portion, said spring being secured to one end and fitted over one side of the apertured end and the concave side portion of said body portion, and a connection lead secured to said spring tension device and said body portion.



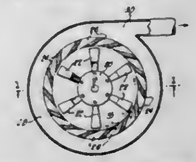
2,474,311
HINGED CASING STRUCTURE
Philip J. Graham, Worcester, Mass., assignor to Trig Corporation, Worcester, Mass., a corporation of Massachusetts
Application October 25, 1947, Serial No. 782,159
1 Claim. (Cl. 220—31)

A hinged casing comprising a receptacle and a cover formed of moulded plastic material having opposed hinge walls, one of the walls having a projection moulded thereon which is provided with axially aligned pivot sockets, and the other wall having a moulded wall portion interfitting with the projection and having a laterally opening recess, ribs at the opposite ends of the recess forming with said wall portion opposed open-ended channels which face towards the pivot sockets, a substantially U-shaped resilient locking member having straight arms slidably mounted in the channels and terminating in axially aligned pivot ends bearing in said sockets and a resilient crossbar integrally connecting said arms which is positioned laterally by the arms in the channels, said pivot ends, arms and bar lying substantially in a plane parallel with the axis of the sockets, and a wedge-shaped lug tapering towards the pivots and projecting laterally from the inner face of the recess beyond the center of and in the path of movement of the crossbar as located by the channels, the end of the lug forming a locking shoulder spaced from the pivot sockets by substantially the length of an arm, so as to cause the central portion of the crossbar to spring laterally when moved along the channels and then to snap into a locking position under the lug shoulder and hold the parts assembled.



2,474,312
STYLUS
Gregory Halpern, New York, N. Y., assignor to Polychrome Corporation, Yonkers, N. Y., a corporation of New York
Application September 21, 1946, Serial No. 698,545
15 Claims. (Cl. 219—21)

1. A two-piece stylus for inscribing on a heat-sensitive surface comprising a heat absorbing and transmitting stylus member and a heating element therefor, said stylus member being formed



of a substance from the group consisting of natural and artificial gems and silicon carbide.

2,474,313
INCANDESCENT GAS BURNER FOR FURNACE WALLS
Frederic O. Hess, Philadelphia, Pa., assignor to Selas Corporation of America, a corporation of Pennsylvania
Application October 25, 1943, Serial No. 507,492
11 Claims. (Cl. 158—7)

11. A burner including a refractory block having a cavity formed in one face thereof, said cavity having converging sides that terminate in an opening that extends through said block, a distributor comprising a body portion received in said opening and a head portion projecting into said cavity, said body being formed with passages of uniform size extending from the end thereof in said opening toward said head, said head being formed with transversely extending passages forming continuations of said first mentioned passages, the passages in said head increasing in size from said first mentioned passages to the periphery of said head and said head having a smooth portion beyond the passages formed therein extending into said cavity.

2,474,314
METHOD AND APPARATUS FOR SIZE REDUCTION AND FIBERIZING OF CRUDE FIBROUS MATERIALS
Frank J. Koehne, Martinsville, N. J., assignor to Johns-Manville Corporation, New York, N. Y., a corporation of New York
Application November 28, 1944, Serial No. 565,546
10 Claims. (Cl. 241—4)

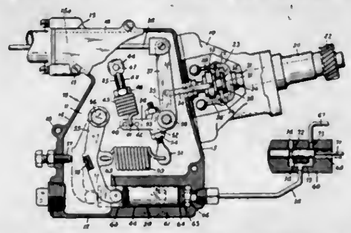
1. The method of dry crushing and opening coarse fibrous material which comprises, forming

and maintaining a thin suspension of the coarse

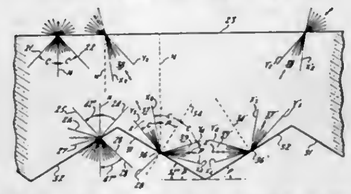
bands having outwardly offset upper and lower

are rendered immovable relative to each other,

and maintaining a thin suspension of the coarse material in a rapidly rotating gaseous fluid vortex, reducing and fiberizing the charge material by centrifugal impact against striking surfaces and by mutual impingement of particles, deflecting the rotational gas flow inwardly at said striking surfaces and developing inertia momentum of incompletely fiberized material tending to retain it within the vortex, and selectively removing suitably reduced and opened fibers tangentially outward from the attrition zone before excessive attrition thereof by reversing the direction of flow of said reduced and opened fibers at the periphery of the vortex.



2,474,315
TOBACCO CAN ELEVATOR
Abraham H. Lavietes, Shelton, Conn.
Application May 17, 1947, Serial No. 748,817
2 Claims. (Cl. 206—41.1)

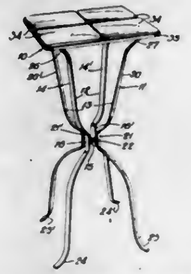


1. In a container comprising upright walls and open at the top, a pivoted closure for said open top, an upright guide member in the container adjacent one of said walls and comprising a substantially flat strip provided with a longitudinal slot having a series of teeth along one edge of said slot, said teeth having substantially horizontal upper edges, a toothed rack mounted for longitudinal reciprocating movement in said guide member, a material support comprising a horizontal supporting portion extending laterally from the guide member and an upright portion provided with lugs cut and bent laterally from the upright portion engaging over the edges of the slot to guide said support for longitudinal sliding movement along the guide member, said support being provided with a shoulder having one way operative engagement with the teeth of the rack to shift the support upwardly, a spring lug cut and bent laterally from said upright portion of the support and inclined downwardly directly from said portion with its lower free end in position to engage the upper edges of the teeth at the edge of the slot to prevent downward movement of the support, and means for causing reciprocating movement of the rack to elevate the support.

2,474,316
TWO-SPEED GOVERNOR
Walter M. May, Plainfield, N. J., and Laurence E. Burgess, Allentown, Pa., assignors to Mack Manufacturing Corporation, New York, N. Y., a corporation of Delaware
Application May 7, 1948, Serial No. 25,684
6 Claims. (Cl. 74—472)

1. In a variable engine speed governor for a vehicle having a change speed transmission shiftable between higher and lower gear ranges; the combination of throttle control means, a centrifugal governor adapted to be connected to and driven by the engine, means for connecting said governor to said throttle control means and tending to move the latter to limit the engine speed, first means opposing the movement of said throttle control means to restrict said engine speed to a predetermined speed in said higher gear ranges, and second means connected to said transmission and responsive to shifting of the transmission into said lower gear ranges to increase the opposition to the movement of the throttle control means in the lower gear range to allow the engine speed to exceed said predetermined maximum.

2,474,317
LIGHT REFRACTING AND TRANSMITTING PLATE AND LIGHTING EQUIPMENT USING THE SAME
Robert G. McPhail, Newark, Ohio, assignor to Holophane Company, Inc., New York, N. Y., a corporation of Delaware
Application April 23, 1946, Serial No. 664,164
20 Claims. (Cl. 240—106)



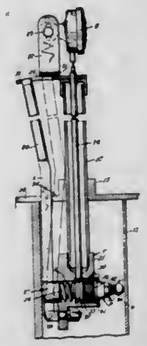
3. A light transmitter composed of a refracting medium denser than air and having in a longitudinally extended plane a first surface so that light rays in air in a normal longitudinally extended plane and converged on a point thereon throughout 180° are concentrated on entry into an internal sector-like region whose width equals twice the critical angle C of the medium, and light in the medium converging on a point on said surface at angles not greater than said critical angle, can pass outwardly through said latter mentioned point, and a second surface composed of a series of contiguous, identical, symmetrical prismatic elements with straight sides and wherein the angle each of said sides makes with the plane of the first surface equals substantially

$$\frac{2}{y}(90°-C)$$

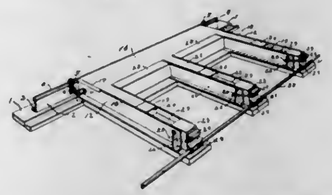
where y is an odd integer greater than unity.

2,474,318
KNOCKDOWN STAND OR TABLE
Charles P. Molla, New Hyde Park, N. Y.
Application February 18, 1946, Serial No. 648,395
3 Claims. (Cl. 311—35)

3. A leg frame for knockdown stands of the character described, said frame comprising two leg members, each leg member comprising two flat bands of substantially the same width and thickness throughout the length thereof, the bands having outwardly offset upper and lower ends and inwardly offset parallel central portions, a flat strap integrally joining and spacing the inwardly offset central portions of the bands, said straps being of the same width as the bands, the strap of one leg member being straight and having a central aperture, the strap of the other leg member being offset centrally to snugly receive the first mentioned strap to key the members in position at right angles to each other, and the offset portion of the last mentioned strap having a pin adapted to extend through the aperture in the first mentioned strap.



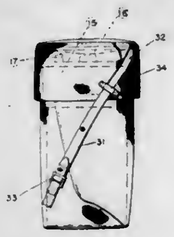
2,474,319
COUPLING FOR PIPING
Jacques Mulier, La Garenne Colombes, France; vested in the Attorney General of the United States
Application November 27, 1942, Serial No. 467,153
In France September 10, 1940
Section 1, Public Law 690, August 8, 1946
Patent expires September 10, 1960
4 Claims. (Cl. 285—196)



1. In a coupling for cylindrical members, the combination of a sleeve of compressible material formed with a cylindrical interior conformably telescoped on the exterior of one of the cylindrical members, said compressible sleeve having an external taper flaring toward its axially outward end and in a direction away from the joint between the cylindrical members, an annular bead formed on the exterior of the sleeve adjacent its axially inward or leading end, an externally threaded union surrounding the sleeve and the cylindrical members and formed with a cylindrical internal portion telescoped on the cylindrical members and bridging the joint therebetween, said union having another tapered internal portion surrounding and overlying said compressible sleeve and flaring in the same direction as the external taper on said sleeve but at a smaller acute angle, clamping nut means including a cap nut threaded on the union, and distortible locking means surrounding a cylindrical member so as to transmit pressure between the outer end of the nut means and the outer or trailing end of said compressible sleeve whereby the sleeve is compressed between the internally tapered portion of the union and the exterior of the cylindrical member and whereby the parts are rendered immovable relative to each other, the trailing end of the compressible sleeve being formed adjacent its radially outward extremity with a radially inwardly projecting annular lip extending to engagement with the exterior of the cylindrical member at an axially outward slant toward the outer end of the nut, the said means transmitting pressure directly to said annular lip.

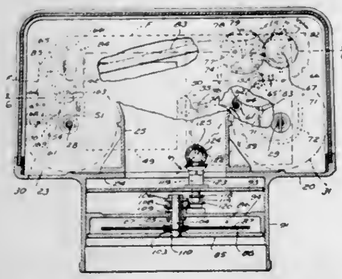
2,474,320
WALL THICKNESS INDICATOR
John S. Pelan, Plainfield, N. J., assignor to Mack Manufacturing Corporation, New York, N. Y., a corporation of Delaware
Application March 20, 1944, Serial No. 527,157
10 Claims. (Cl. 73—119)

1. Wall thickness indicator comprising a bearing member adapted to make longitudinal line contact with the bore of a cylinder at spaced points on its inner wall, a contact member slidable on said bearing member and adapted to be projected into engagement with the opposite side of said cylinder bore, means for suspending said members within said cylinder bore, means for applying a predetermined pressure on said contact member when in engagement with said opposite side of the cylinder bore, and means for indicating the extent of projection of said contact member.



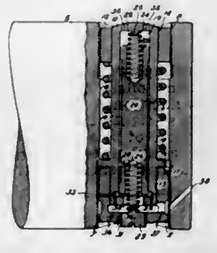
2,474,321
MOLD FOR CONCRETE STEPS
Colquit Peterson, Tampa, Fla.
Application December 17, 1945, Serial No. 635,442
3 Claims. (Cl. 25—118)

1. An adjustable mold for monolithic portable steps comprising a front plate, end plates adjustable longitudinally of the front plate, and a clamp for each end plate having two arms, one to bear against the outer surface of the vertical



wall of the front plate and having a screw to bear against the wall at about midway of its height, and the other arm having a bolt pivoted thereto for detachable engagement with the end plate and a nut on the bolt to draw and hold the end plate in tight engagement with the front plate.

2,474,322
WATER FILTER CARRYING CASE
David H. Quinn, United States Navy
Application July 31, 1946, Serial No. 687,502
4 Claims. (Cl. 150—3)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



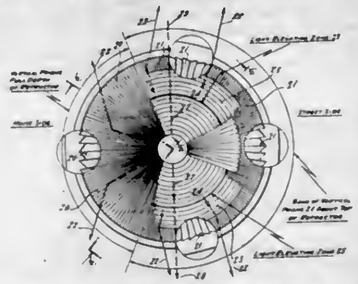
4. A container operable to provide a carrying case for a portable water purifier unit and also to provide a water scoop and reservoir for the purifier, comprising a substantially cylindrical open top container having a bottom, the side wall of the container being of flexible material and including a hollow flap portion which may be opened to enlarge the capacity of the container or folded around the purifier when it is used as a carrying case, a hinged cap adapted to telescope over the container when used as a carrying case having a split side wall, and a single securing means to draw said split wall together; prevent hinged movement of said cover; and retain said flap portion folded around the purifier.

2,474,323
CAMERA FOR PHOTOGRAPHING OBJECTS MOVING RELATIVELY TO THE CAMERA
George Rattray, Mineola, N. Y., assignor to Fairchild Camera and Instrument Corporation, Jamaica, N. Y., a corporation of Delaware
Application September 20, 1944, Serial No. 554,899
4 Claims. (Cl. 95—12.5)

1. In camera construction, in combination, a film magazine adapted to receive strip film, means for moving film across the focal plane of the camera during the exposure period, film feeding means associated with and operated by said film moving means for moving said film in the same direction between exposures but at a faster rate than during an exposure, and means operated by said film moving means for creating slack at the supply end of said film as the movement of said film accelerates during its period of faster movement between exposures.

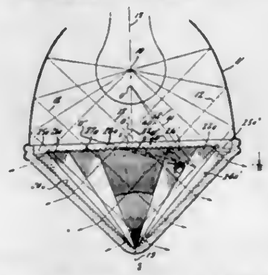
2,474,324
GOVERNOR
James L. Ray, Elm Grove, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application March 9, 1945, Serial No. 581,833
11 Claims. (Cl. 264—17)

3. A governor, comprising: a rotary member; first means mounted on said member for movement relative to the axis of rotation of said member in response to centrifugal force; resilient means opposing the centrifugal force acting on said first means when said member is rotating; auxiliary means mounted on said member for movement relative to said axis of rotation in response to centrifugal force; and means whereby centrifugally-caused movement of said auxiliary means augments the force tending to move said first means in response to centrifugal force.



2,474,325
AQUEOUS LUBRICANT
Thomas T. Rodgers, Milwaukee, Wis.; Thomas T. Rodgers, Jr., executor of said Thomas T. Rodgers, Sr., deceased
No Drawing. Application April 7, 1943, Serial No. 482,114
4 Claims. (Cl. 252—49.3)

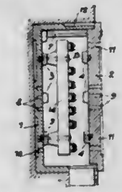
2. A lubricant composition entirely composed of a single phase homogeneous aqueous solution containing in solution from 0.1% to 10% of amino amide of halogenated stearic acid and 0.1% to 20% of a free amine.



2,474,326
STREET LIGHTING LUMINAIRE
Thomas W. Rolph, Newark, Ohio, assignor to Holophane Company, Inc., New York, N. Y., a corporation of Delaware
Application December 18, 1945, Serial No. 635,698
5 Claims. (Cl. 240—25)

5. A street lighting refractor in the form of a bowl with downwardly and inwardly extending side walls, the upper part of the side walls having systems of vertical light concentrating prisms, the lower parts of the walls below the central

portion of each system of prisms having a vertically disposed series of horizontal prisms of variant refracting power which elevate downwardly divergent light rays into parallelism.



2,474,327
STREET LIGHTING LUMINAIRE
Thomas W. Rolph, Newark, Ohio, assignor to Holophane Company, Inc., New York, N. Y., a corporation of Delaware
Application May 7, 1946, Serial No. 667,826
11 Claims. (Cl. 240—106)

1. A street lighting refractor having the general shape of an inverted circular cone, the upper surface of the refractor being divided into sectors, on opposite sides of a median vertical plane, each sector including a plurality of pyramidally disposed flat areas, each of these flat areas having a system of parallel light elevating prismatic ridges of uniform refracting power and running in a direction oblique to the horizontal, whereby downwardly directed light rays crossing the axis of the cone at uniform vertical angles and falling on said system of prisms, are deviated uniformly vertically and also deviated laterally toward the median plane, the refracting power of the systems of ridges increasing as the flat areas are more remote from the median plane so that the transmitted rays are directed in the general direction of said plane.

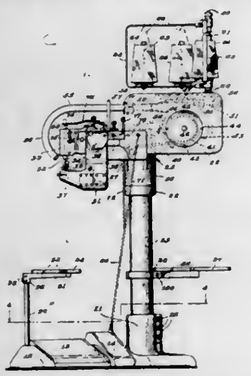
2,474,328
JUNCTION BOX FOR ELECTRIC LINES
Alfred Rothfuchs, Zurich, Switzerland
Application January 8, 1946, Serial No. 639,851
In Sweden February 22, 1944
3 Claims. (Cl. 174—50)

1. A junction box of the character described comprising two interfitting parts, a hollow housing and a cover plate for said housing, respectively, said housing having an end wall arranged opposite said cover plate, inwardly directed and opposed projections disposed on the respective inner faces of said end wall and of said cover plate, said projections being adapted for detachably mounting thereon a carrier for terminals,

and diagonally disposed securing means engaging said end wall and said cover plate independently of the position of the cover plate with respect to a support to which said junction box may be applied or in which said junction box may be set in, selectively.

2,474,329
DRILLING FLUID FOR HEAVING SHALE
Richard A. Salathiel, Houston, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J., a corporation of Delaware
No Drawing. Application January 13, 1948, Serial No. 2,139
4 Claims. (Cl. 252—8.5)

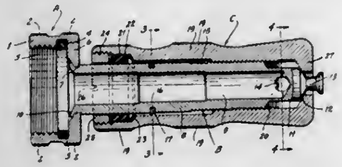
1. A drilling fluid for preventing the hydrous disintegration of shales comprising clay, water, 6 to 15% sodium hydroxide by weight based on the fluid, 1 to 10% by weight based on the fluid of an alkali metal salt of a weak inorganic acid for promoting the effectiveness of the sodium hydroxide in preventing disintegration of shale, and sodium chloride in an amount substantially to saturate the said fluid.



2,474,330
AQUEOUS BASE DRILLING FLUID FOR HEAVING SHALE
Richard A. Salathiel, Houston, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J., a corporation of Delaware
No Drawing. Application January 30, 1948, Serial No. 5,500
4 Claims. (Cl. 252—8.5)

1. A drilling fluid for preventing the hydrous disintegration of shales comprising clay, water, 6 to 15% sodium hydroxide by weight based on the fluid, 1 to 10% by weight based on the fluid of an alkali metal salt of an organic acid having at least two carbon atoms and not more than four carbon atoms for promoting the effectiveness of the sodium hydroxide in preventing disintegration of shale, and sodium chloride in an amount to saturate substantially the said fluid.

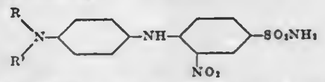
2,474,331
SEWING MACHINE UNIT
George Sauer, Berwyn, Ill., assignor to Union Special Machine Company, Chicago, Ill., a corporation of Illinois
Application June 29, 1945, Serial No. 602,198
11 Claims. (Cl. 112—258)



1. In a sewing machine unit, a base, a tubular post extending upwardly from said base, support-

ing means secured to said post above and in spaced relation to said base, a sewing machine carried by said supporting means to one side of said post and in spaced relation to said post and said base, power means carried by said supporting means to

the opposite side of said post and in spaced relation to said post and said base for driving said sewing machine, and means within the post for dampening noises incident to the operation of the unit.

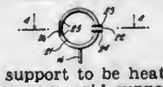


2,474,332
SPRAY NOZZLE
Carl C. Sciuto, St. Louis, Mo.
Application January 11, 1946, Serial No. 640,527
1 Claim. (Cl. 299—131)

In a spray nozzle, the combination with a hollow stem having a valve plug at one end and a recess in the periphery thereof, of a revoluble barrel enclosing said stem having interfitting threaded engagement therewith, whereby upon rotation of said barrel relative longitudinal movement in respect of said sleeve is imparted thereto, a wall at one end of said barrel forming an outlet orifice and providing a valve seat for said valve plug, a packing member carried by said barrel at the opposite end to said outlet orifice, said packing including a metal washer on its forward face, and a compressible split ring mounted in said recess in said stem having a frusto-conical surface, the greatest diameter of which faces said washer to permit movement of said barrel in one direction for the assembly of the stem and barrel, and limiting movement in the opposite direction after said members are assembled, the greatest diameter of said split ring being disposed opposite to said metal washer when said stem and barrel are in assembled relation.

2,474,333
DIPHENYLAMINE SULFONAMIDE DYESTUFFS
George W. Seymour and Victor S. Salvin, Cumberland, and Wilford Donald Jones, Cresaptown, Md., assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application March 5, 1946, Serial No. 652,234
4 Claims. (Cl. 260—397.7)

1. Diphenylamine dyestuffs of the following general formula:

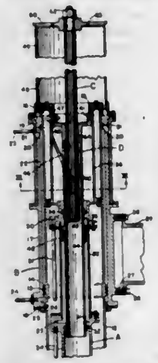


wherein R and R' are members of the group consisting of hydrogen, alkyl, hydroxyalkyl and lower alkyl carbonyl acyl radicals.

2,474,334
PRODUCING MALEIC ACID BY OXIDATION OF CYCLOHEXANE
Albert J. Shmidl, Houston, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J., a corporation of Delaware
Application April 10, 1947, Serial No. 740,563
1 Claim. (Cl. 260—533)

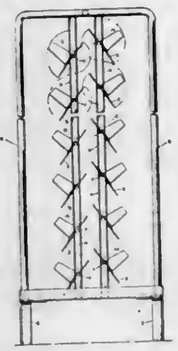
A method for oxidizing cyclohexane which includes the steps of forming a bed of vanadium pentoxide, heating said bed to a temperature of approximately 800° F., passing a heated vaporous stream of cyclohexane at a temperature of about 800° F. over said bed for a time sufficient to activate said bed, forming an admixture of cyclohexane with an oxygen-containing gas, reducing the temperature of said activated bed from about 800° F. to approximately 600° F. and subsequently passing said admixture at a temperature of approximately 600° F. over said activated bed to obtain improved yields of maleic acid from the cyclohexane in said admixture.

2,474,335
GETTER STRUCTURE FOR ELECTRON DISCHARGE DEVICES
Albert M. Skellett, Madison, N. J., assignor to National Union Radio Corporation, Newark, N. J., a corporation of Delaware
Application May 13, 1947, Serial No. 747,780
10 Claims. (Cl. 250—27.5)



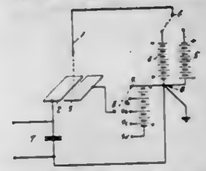
3. A getter support to be heated by high-frequency wave energy, said support comprising a tuned conductive ring whose dimensions are proportioned to cause it to resonate electrically as a wave transmission line at said high frequency, said ring having a thinned-out portion supporting getter material.

2,474,336
COLUMN ASSEMBLY, INCLUDING PRESSURE FLUID MOTORS FOR MOVING OBJECTS LONGITUDINALLY AND ANGULARLY
Albert L. Stone, Palos Verdes Estates, Calif., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J., a corporation of Delaware
Application July 12, 1947, Serial No. 760,574
3 Claims. (Cl. 121—46)



1. An assembly comprising, in combination, a post member, an outer cylinder slidably mounted

on the post member for vertical and rotative movement thereon, a hollow piston rod and piston slidably mounted within the post member, means to cause said piston to move angularly with respect to the post member upon slidable



movement and means mechanically connecting the hollow piston rod with the outside cylinder to cause angular movement of the outside cylinder upon angular movement of the hollow piston rod.

2,474,337
TRANSPORT
Frederick F. Sutherland and William T. Stearn, Cumberland, Md., assignors to Celanese Corporation of America, a corporation of Delaware
Application August 16, 1946, Serial No. 690,899
2 Claims. (Cl. 211—153)

1. A transport for textile materials comprising a framework, two pairs of longitudinally aligned standards mounted on said framework, pivots in said standards, the pivots in one pair of longitudinally aligned standards being staggered with respect to the pivots in the other pair of longitudinally aligned standards, panels rotatably mounted on the pivots in the standards, the panels mounted on one pair of longitudinally aligned standards being staggered with respect to the panels mounted on the other pair of longitudinally aligned standards, means on said panels for holding a yarn package, and means for supporting said panels in a predetermined position.

2,474,338
ELECTROIONIC COMMUTATION SYSTEM AND ITS APPLICATION, ESPECIALLY TO THE SCANNING IN TELEVISION
Pierre Marie Gabriel Toulon, Paris, France
Application August 4, 1947, Serial No. 766,033
In France January 30, 1942
10 Claims. (Cl. 320—1)

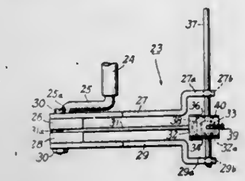
1. An electro-ionic commutator comprising a glow discharge electrode, first and second collecting electrodes symmetrically disposed with respect to said glow discharge electrode, means for introducing relatively controllable potentials between each of said first and second collecting electrodes and said glow discharge electrode, the magnitude of at least one of said potentials being sufficient to effect glow discharge selectively from said glow discharge electrode to only one of said collecting electrodes.

2,474,339
KERATIN DERIVATIVES AND PROCESS OF PREPARATION THEREOF
Wilfred H. Ward and Charles H. Binkley, Berkeley, Calif., assignors to United States of America as represented by the Secretary of Agriculture
No Drawing. Application November 22, 1946, Serial No. 711,765
17 Claims. (Cl. 252—316)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A process for preparing proteinaceous products which comprises heating a keratin-containing material at a temperature from 50° to 150° C. with a liquid comprising water and a water-soluble aliphatic alcohol in the proportion of from 0.25 to 3.0 parts by volume of the alcohol to each part by volume of water, said liquid containing, in addition to the water and alcohol in the proportions recited, about from 1 to 10 percent, based on the amount of said keratin-containing material, of a sulphur-containing, reductive disulphide-splitting agent when the process is conducted at a temperature of 50° C. to about 110° C.

16. A gel comprising a water-soluble aliphatic alcohol, water, and a high molecular weight keratinaceous product, the alcohol and water being present in the proportion of from 0.25 to 3 parts, by volume, of the alcohol to each part, by volume, of water, said keratinaceous product containing about 15 percent nitrogen and about 3 percent sulphur, being digestible by pepsin and trypsin, showing true flow under high pressure and temperature, being insoluble in water and in dilute aqueous acids and salts, and being soluble in warm 50 percent aqueous ethanol to form a solution which gels upon cooling.

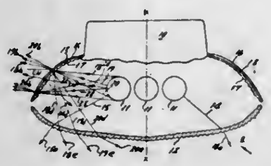
2,474,340
FLOATING ELECTRODE
Samuel W. Warner, Newark, N. J.
Application January 15, 1948, Serial No. 2,373
12 Claims. (Cl. 219—4)



1. In welding apparatus, in combination, a fixed support having an electrode mounted there-

the opposite direction after said members are assembled, the greatest diameter of said split ring being disposed opposite to said metal washer when said stem and barrel are in assembled relation.

poration of Delaware
Application July 12, 1947, Serial No. 760,574
3 Claims. (Cl. 121—46)



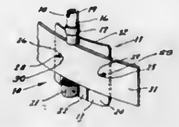
1. An assembly comprising, in combination, a post member, an outer cylinder slidably mounted

on, a shaft, a second support mounted on said shaft for movement about the axis thereof, power mechanism for moving said second support in an arc toward said fixed support, a resilient arm attached to and movable with said movable support, an electrode carried by and movable with said resilient arm into axially aligned engagement with said fixed electrode, whereby when said movable support is swung toward said fixed support, the opposed ends of said electrodes clamp between them the pieces

to be welded, and said resilient arm is somewhat flexed thereby to drive said second electrode toward said first electrode axially thereof when the metal being welded softens without the necessity of moving said movable support to effect such movement of the movable electrode, and a guiding device secured to and carried by said movable support, said movable electrode slidingly engaging said device as to be constrained thereby to substantially axial movement only relative thereto.

2,474,341
SURFACE ATTACHED FLUORESCENT LIGHTING LUMINAIRE
Vearl S. Wince, Newark, Ohio, assignor to Holophane Company, Inc., New York, N. Y., a corporation of Delaware
Application November 29, 1946, Serial No. 713,125
13 Claims. (Cl. 240—93)

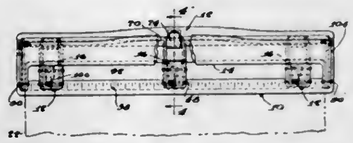
1. A fluorescent lighting luminaire having a horizontal rectilinear fluorescent lamp, and a reflector parallel with the lamp and occupying a zone of substantial angular width extending upwardly from substantially the level of the bottom of the lamp so as to intercept lower angled upwardly directed light, the reflector having a predetermined general profile having a series of external, vertical, totally reflecting prisms crossed by a series of upwardly thickening horizontal refracting prisms forming a stepped profile on one surface, the series of refracting prisms cooperating to elevate both the transmitted light emitted through the upper surface and the reflected light emitted through the lower surface as compared with the directions obtainable with a reflector of like profile smooth both inside and out.



2,474,342
HYDROCARBON OIL COMPOSITIONS
David W. Young, Roselle, and Paul W. Brakeley, Jr., Plainfield, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application September 16, 1947, Serial No. 774,434
2 Claims. (Cl. 252—52)

1. A composition consisting essentially of a major proportion of a waxy mineral oil base stock, containing dissolved therein about 0.1 to 10% by weight of a resinous product having the general formula

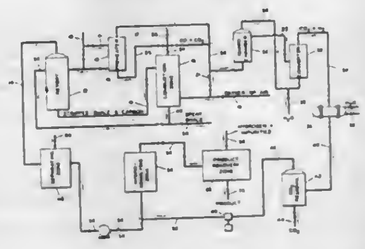
$$[R_xAr(OH).C_2H_4—]n$$



in which R_x represents 1–4 alkyl groups having a total of 3 to 30 carbon atoms, i. e., x being 1–4, Ar represents an aromatic nucleus and n indicates the degree of polymerization, the resinous product having an average molecular weight of about 800 to 2000 and having a Ubbelohde drop point of about 100° to 180° C.

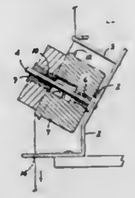
2,474,343
FLY REEL SEAT
Royal L. Burden, Springfield, Ohio, assignor of one-eighth to Russell L. Dix, Springfield, Ohio, and one-eighth to Tira Q. Dix, Dayton, Ohio
Application June 23, 1945, Serial No. 601,183
2 Claims. (Cl. 43—4)

1. A fly reel seat comprising a substantially flat base, a tube projecting from one side thereof, a semi-cylindrical member projecting from the opposite side thereof, a slidable collar on the tube, a second semi-cylindrical member surrounding said first semi-cylindrical member and spaced therefrom, said collar being of larger diameter than the tube upon which it operates, and a lug extending laterally from said tube for engagement by said slidable collar to limit the travel of said collar on said tube.



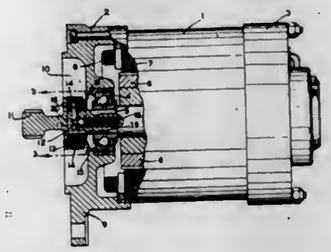
2,474,344
MULTIHOLE PUNCH
John Allan Carpenter, Waban, Newton, Mass.
Application January 16, 1946, Serial No. 641,529
10 Claims. (Cl. 164—91)

1. A multi-hole paper punch comprising an elongated base member, a guide rod carried by said base member, a plurality of individual punch units adjustably supported in said base and slidingly mounted on said elongated rod, means for



frictionally retaining the units in their adjusted position including a yieldable member carried by each of said punch units and in frictional engagement with said rod, and an actuating member pivotally mounted in said base and cooperating with said punch units to perform the punching operation in the different adjusted positions of said units, said yieldable member comprising a U-shaped spring having an opening in the upright legs thereof through which the rod may pass and having a reversely curved extension from one leg bearing against the rod.

2,474,345
RECOVERY OF HYDROCARBONS FROM OIL SHALE
Alfred Clark and Howard R. Sailors, Bartlesville, Okla., assignors to Phillips Petroleum Company, a corporation of Delaware
Application May 19, 1947, Serial No. 749,063
3 Claims. (Cl. 196—53)

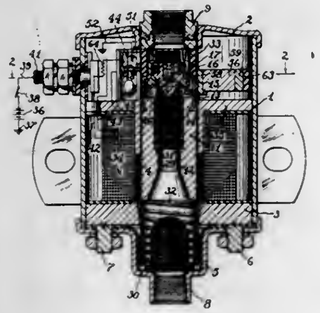


3. A process for the recovery of a hydrocarbon material from oil-bearing shale, which comprises admixing in a retorting zone hot spent shale from a combustion zone and particles of oil-bearing shale, maintaining the ratio of said hot spent shale to said oil-bearing shale such that a suitable temperature is maintained in said retorting zone to dislodge organic material from said oil-bearing shale, separating said resulting organic material from said retorting zone; withdrawing stripped shale containing residual carbonaceous material from said retorting zone and introducing at least a portion of said stripped shale into a combustion zone, introducing oxygen into said combustion zone, maintaining a suitable temperature in said combustion zone to convert said residual carbonaceous material retained by said stripped shale to carbon monoxide; withdrawing the resulting hot spent shale from said combustion zone and recycling at least a portion of said hot spent shale to said retorting zone; withdrawing carbon monoxide-containing material from said combustion zone and treating at least a portion of said carbon monoxide-containing material to remove impurities, and subsequently admixing resulting carbon monoxide with steam and passing the resulting mixture over a suitable catalyst in a conversion zone under such conditions that the carbon monoxide and steam are converted to hydrogen and carbon dioxide; treating at least a portion of the resulting mixture, comprising hydrogen and carbon dioxide; to remove the carbon dioxide; treating at least a portion of said organic material with purified hydrogen in the presence of a suitable hydrogenation catalyst maintained under such conditions that said organic material is hydrogenated and recovering a resulting hydrocarbon material as a product of the process.

2,474,346
WAX APPLICATOR FOR YARNS, THREADS, AND THE LIKE
Melvin B. Coleman and Jesse R. Bennington, Roanoke, Va., assignors to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application November 12, 1946, Serial No. 709,184
5 Claims. (Cl. 91—36)

1. A device for applying a normally solid wax-like material to a traveling yarn comprising a spindle, a member rotatably mounted on the spindle having a recess concentric with the spindle and having a plane surface surrounding the recess perpendicular to the spindle, and a sleeve having a smaller diameter than the recess rotatably and slidably mounted on the spindle, said sleeve serving to carry a wax cake fixedly secured thereabout and being adapted to telescope into the recess as the wax cake is expended, said sleeve being urged axially of the spindle toward the recess to press the wax cake against the plane surface of the member.

2,474,347
FLEXIBLE DRIVE
John Edward Collins, Belleville, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application June 11, 1947, Serial No. 754,004
3 Claims. (Cl. 64—11)

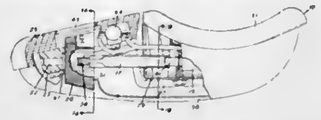


1. In a device of the class including a casing, a stator carried by the casing, and a driven shaft rotatably mounted in the casing and carrying a rotor member; the improvement comprising a driving shaft, a plate affixed to said driving shaft, pin members axially extending from said plate, a pair of rubber buffer segments carried by said pin members, a cross pin releasably mounted in said driven shaft for engagement in said buffer segments at opposite ends of said cross pin so as to flexibly couple said driving and driven shafts.

2,474,348
VARIABLE DISPLACEMENT RADIAL VANE ROTARY MOTOR
Severin F. Czerner, Kings Mill, Tex.
Application July 28, 1944, Serial No. 547,073
2 Claims. (Cl. 121—85)

1. A wheel motor for a wheel of a vehicle, said motor comprising a rotor casing, a shiftable circular vane guide in the casing, a floating centerpiece therein, an annular rotor spacedly surrounding the centerpiece within the vane guide, a plurality of radially slidable vanes on the rotor for engaging the vane guide and the centerpiece, a wheel disk fixed to the rotor, inlet and outlet ports in the casing, a hydraulic fluid supply conduit leading to said inlet port, a hydraulic fluid return conduit leading from the outlet, a lobe on one side of the vane guide for engaging the casing, the casing being provided with a cam surface whereby the lobe causes shifting of the vane guide toward greater eccentricity upon increase of pressure at the motor inlet, and an eccentricity-controlling spring expanding in the casing against the opposite side of the vane guide.

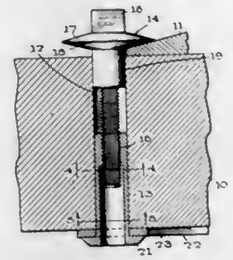
2,474,349
ELECTROMAGNETIC PUMP
John W. Dickey and Millard M. Henry, Elmira, N. Y., assignors to Bendix Aviation Corporation, Elmira Heights, N. Y., a corporation of Delaware
Application February 11, 1946, Serial No. 646,952
1 Claim. (Cl. 103—53)



In an electromagnetic pump a non-magnetic cylinder, a piston of magnetic material slidable thereon having an axial passage therethrough, means for controlling the flow of fluid through said passage including a check valve member movably mounted on the piston, a relief valve member formed to provide a seat for the check valve member, movably mounted on the piston, said piston having a seat cooperating with the relief valve member, a comparatively light spring urging the check valve member toward its seat, a substantially stiffer spring holding the relief valve member on its seat, and means for reciprocating the piston including an electromagnet surrounding the cylinder adapted when energized to retract the piston, the mass of the check valve member being so related to the strength of the spring that the action of the electromagnet unseats the check valve and opens a free passage through the pump, and a spring for actuating the piston to discharge fluid from the pump when the electromagnet is deenergized, said relief valve spring being arranged to yield and permit the relief valve to open momentarily to cushion the shock occasioned by the reversal of the motion of the piston by the piston spring when the electromagnet is deenergized.

2,474,350
POLYSULFONE RESIN PLASTICIZED WITH ESTER OF ORGANIC SULFONIC ACID
George E. Ellerman, Milwaukee, Wis., assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa., a corporation of Pennsylvania
No Drawing. Application June 24, 1944, Serial No. 542,014
4 Claims. (Cl. 260—30.8)

1. As a new composition of matter, a resin comprising a conjoint polymerization product of an olefin hydrocarbon and sulfur dioxide, said resin being plasticized with the ester of cresol and benzyl sulfonic acid.

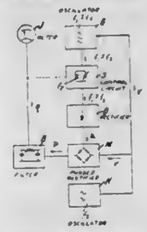


2,474,351
IRONER SHOE AND TABLE
Walter C. Erler, South Bend, Ind., assignor to Bendix Home Appliances, Inc., South Bend, Ind., a corporation of Delaware
Application September 26, 1947, Serial No. 776,224
1 Claim. (Cl. 219—19)

In an ironing machine shoe and table combination, a shoe, a table adjacent said shoe, connections between said shoe and said table permitting adjustable movement of said table relative to said shoe, a heating element under said shoe, a thermostatic element adjacent said heating element for controlling said heating element, a rotatable control member for said thermostatic element located under said table for rotation and in a definite position relative to said table, a shaft connecting said thermostatic element with said rotatable control member, a slot in said rotatable control member to receive said shaft, and a resilient member urging said shaft toward said thermostatic element whereby small variations in distance between said control member and said thermostatic element caused by adjustment of relative position of said shoe and table are compensated without changing the position of said rotatable control member relative to said table.

2,474,352
RAIL FASTENER
Joseph Ferche, Chicago, Ill.
Application December 13, 1946, Serial No. 716,086
1 Claim. (Cl. 238—377)

A fastener for use with a rail and a tie having a vertical cylindrical bore therethrough, said fastener comprising a threaded sleeve insertable in said bore from the underside of said tie and having a flat enlarged base at its lower end, an anchor plate interposed between said base and said tie, and a threaded bolt insertable in said bore from the upper side of said tie, said bolt having a head the underside of which is conical and adapted to grip the base of said rail, said



bolt having a reduced threaded portion cooperating with said sleeve to draw said head against said rail base, said sleeve and said bolt each having a cylindrical portion the diameter of which is substantially equal to that of said bore, said plate having an opening with straight sides and said sleeve having a rectangular portion adjacent said base cooperating with the plate opening to prevent turning of said sleeve.

2,474,353
ARMATURE WINDING MACHINE
William A. Goodman, Atlanta, Ga.
Application January 23, 1946, Serial No. 642,919
1 Claim. (Cl. 242—13)

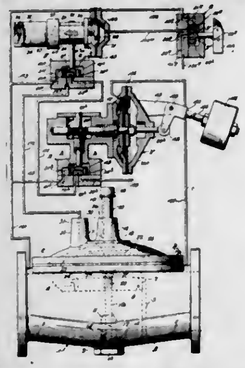
An armature winding machine comprising a chuck body shaped to receive one side of an armature core, a key removably carried by the chuck body for engaging the core to secure the latter against rotation in the body, means for rotating the chuck body, a releasable rotating clamp engaging an opposite side of the core, said core including a commutator at one end, and a pair of wire guides attached to the chuck body at opposite sides of the core, said guides comprising plates having rearwardly curved outer side and end portions adapted to feed the wire into the slots of the armature between the core and commutator, said plates at one end having lateral extensions turned toward each other and spaced apart to provide an opening therebetween in alignment with said key for removal of said key therethrough.

2,474,354
AUTOMATIC FREQUENCY CONTROL CIRCUITS
Gustav Guanella, Zurich, Switzerland, assignor to "Patelhold" Patentverwertungs- & Electro-Holding A.-G., Glarus, Switzerland
Application June 4, 1943, Serial No. 489,679
In Switzerland May 19, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires May 19, 1962
13 Claims. (Cl. 250—40)

1. In radio receiving or transmitting apparatus, a pair of serially arranged oscillatory circuits comprising a tunable carrier frequency oscillator working into a tunable control circuit normally resonant at the desired frequency of carrier wave generation, said oscillator including a voltage-variant reactance to control the resonant frequency thereof, means for cyclically varying the resonant frequency of said control circuit about its normal value of the desired frequency of carrier wave generation, whereby the output voltage of said circuits varies periodically in amplitude with the cyclic detuning of said control circuit, means for rectifying said amplitude-variant voltage to develop an alternating voltage of the frequency of the periodic detuning, means for phase-rectifying such alternating voltage to develop a pulsating voltage having a mean value dependent in magnitude and sign upon the degree and sense of the average detuning of said circuits with respect to each other, and means for impressing said pulsating voltage upon the voltage-variant reactance in said oscillator circuit to reduce the average detuning.

2,474,355
REMOTE-CONTROL MEANS FOR VALVES
Donald G. Griswold, Alhambra, Calif., assignor to Clayton Manufacturing Company, Alhambra, Calif.
Application August 29, 1942, Serial No. 456,678
2 Claims. (Cl. 137—139)

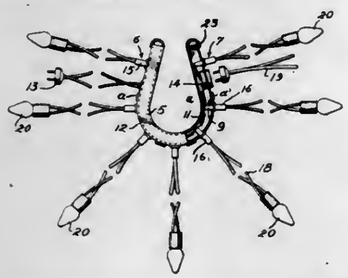
1. In combination, an automatic valve and emergency remote control means for said valve, comprising: a main valve body having inlet and outlet chambers and closure means for controlling the flow between said chambers; and three pilot valves, each of said pilot valves having a chamber for fluid under pressure connected with the inlet chamber of said main valve and a ported pilot disc in said pressure chamber, the first of said pilot valves being capable of effecting closing and opening of said main valve and having a pressure-responsive mechanism associated therewith connected with the outlet chamber of said main valve, said mechanism being operably connected with the pilot disc of said first pilot valve so that said first pilot valve is automatically actuated in accordance with the pressure conditions in the outlet chamber of said main valve, the second of said pilot valves having a fluid-pressure-operable device associated therewith for



actuating the pilot disc of said second pilot valve and thus controlling the operation of said second pilot valve, the pilot disc of said second pilot valve being arranged so that normally operating fluid can flow therethrough to and from said main

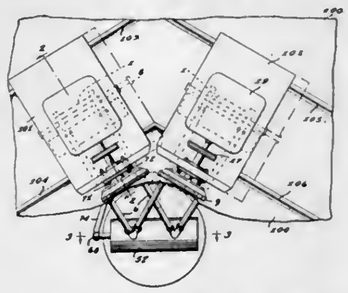
2,474,357
DRILL GRINDER
Elizabeth E. Haynes, Brighton, Mass.
Application July 11, 1947, Serial No. 760,257
4 Claims. (Cl. 51—56)

2,474,359
JET ENGINE
Vittorio Isacco, London, England
Application August 3, 1946, Serial No. 688,268
In Great Britain August 3, 1945
8 Claims. (Cl. 170—135.4)



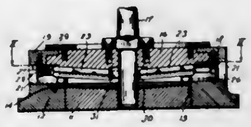
outlet pipe of said stove which normally heats the hot water for said tank, a valve-controlled outlet fitting at one end of the tube for removing the hot water generated within the installation, terminal elements extending through the outlet fitting and insulated therefrom, a heating element extending downwardly from one of

actuating the pilot disc of said second pilot valve and thus controlling the operation of said second pilot valve, the pilot disc of said second pilot valve being arranged so that normally operating fluid can flow therethrough to and from said main valve in accordance with the position of the pilot disc of said first pilot valve, the pilot disc of the third of said pilot valves being arranged to con-



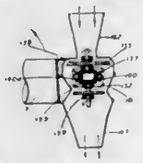
trol the admission and exhaust of operating fluid to the fluid-pressure-operable device associated with said second pilot valve, whereby said third pilot valve can control actuation of said second pilot valve disc to effect closing of said main valve independently of both said first pilot valve and the pressure in the outlet chamber of said main valve.

2,474,356
ELECTRICAL DISTRIBUTION JACK
Ernest W. Harris, Detroit, Mich.
Application August 19, 1946, Serial No. 691,451
1 Claim. (Cl. 173—334)



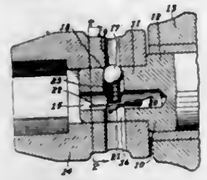
A connector attachment for electric light bulbs to be attached to a tree, comprising a hollow horseshoe shaped body of rubber, a separate rubber sheet forming the outer side of said horseshoe shaped body, two rows of connector jacks carried by said outer sheet, projecting inwardly into the hollow horseshoe shaped body with their connection-making ends accessible from the outside, a fixed feed wire connection between the connector jacks of each row carried by said sheet, projecting ears on said horseshoe shaped body to hold the said separate sheet in place along the outer side of the horseshoe shaped body, and supply wire connections to supply the feed wires with current.

2,474,357
DRILL GRINDER
Elizabeth E. Haynes, Brighton, Mass.
Application July 11, 1947, Serial No. 760,257
4 Claims. (Cl. 51—56)



1. A machine for grinding two different faces of a tool lying in intersecting planes, said machine comprising a relatively stationary bed, a pair of tables mounted on said bed for movement toward and away from the intersection of said planes, means for positioning the tool to be ground, powered grinding wheels mounted on said tables for engaging the related faces of the tool, and operating means for alternately moving said tables toward and away from the intersection of said planes whereby one of said grinding wheels moves toward the intersection and across the related face of the tool while the other grinding wheel moves away from the intersection and across the face of the tool related thereto.

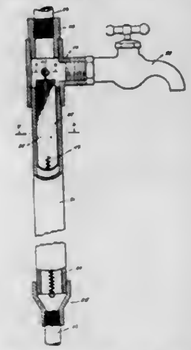
2,474,358
MEANS FOR LAPPING TAPER SIDED SPLIT RINGS
John William Howlett and Arthur J. Woolcott, Lymington, England, assignors of one-third to Wellworthy Piston Rings Limited, Lymington, England
Application February 3, 1947, Serial No. 726,160
In Great Britain November 24, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires November 24, 1961
6 Claims. (Cl. 51—56)



1. A mechanical means, for honing or lapping a side face of a taper-sided split piston ring, including a base adapted to support the ring, means fast with the base for engaging in the split of the ring for preventing relative rotation between said ring and said base, a head carrying a slide, the slide supporting a honing or lapping block in contact with the appropriate side face of the ring, means for effecting relative rotation of the head and base, and cam means coacting with the slide so as to oscillate the latter during such relative rotation, the slide and honing or lapping block being mounted so that the oscillatory movement of the said block will be parallel to the taper of the side face of the ring.

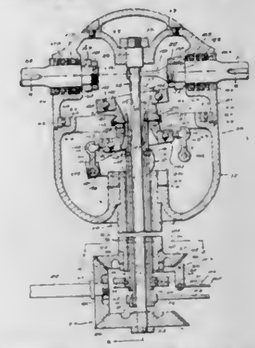
2,474,359
JET ENGINE
Vittorio Isacco, London, England
Application August 3, 1946, Serial No. 688,268
In Great Britain August 3, 1945
8 Claims. (Cl. 170—135.4)

1. A rotary blade for a helicopter having at its outer extremity a jet propulsion unit comprising a combustion chamber having inflow and outflow passages, a turbine driven by the outflowing gas stream, an air compressor driven by the turbine to compress the incoming charge, and direction reversing mechanism between the air compressor and the turbine whereby these parts rotate in opposite directions, the axis of the compressor and turbine being vertically spaced from the axis of the blade, the position of the axis of the compressor and turbine depending on the direction of rotation of the heavier of the two rotating elements with respect to the direction of rotation of the blade.



2,474,360
RETAINER
Francis A. Jimerson, Athens, Pa., assignor to Ingersoll-Rand Company, New York, N. Y., a corporation of New Jersey
Application August 31, 1945, Serial No. 613,780
5 Claims. (Cl. 287—119)

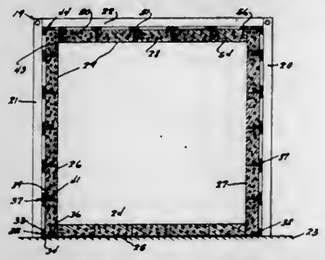
5. A wrench spindle and the like comprising a shank having a tool engaging section and provided with intersecting transverse and longitudinal holes, the longitudinal hole opening from the end surface of the spindle and the transverse hole opening in opposite sides of the spindle and having a constriction adjacent one end, a detent loose in the transverse hole protruding therefrom and restricted by said constriction, and a member located in said longitudinal hole to retain the detent in the transverse hole and being constantly accessible through the transverse hole.



2,474,361
ELECTRIC WATER HEATER
Paul C. Jones, Nichols, S. C.
Application November 29, 1946, Serial No. 712,806
2 Claims. (Cl. 219—39)

1. An electric heater installation for a hot water supply system including a hot water tank and a stove and adapted to produce small quantities of hot water within a short time and independently of the hot water tank comprising a large tube having fittings upon the opposite ends adapted to be disposed between sections of the outlet pipe of said stove which normally heats the hot water for said tank, a valve-controlled outlet fitting at one end of the tube for removing the hot water generated within the installation, terminal elements extending through the outlet fitting and insulated therefrom, a heating element extending downwardly from one of

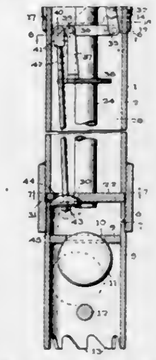
the terminals throughout the extent of the tube and thence upwardly throughout the tube for connection with the other terminal, said fitting at the outlet end of the tube being a T-fitting, and a spigot connected to said fitting, said terminal elements being connected to the opposite sides of said fitting.



2,474,362
HELICOPTER
Theodore S. Keranen, Detroit, Mich.
Application September 14, 1944, Serial No. 554,072
1 Claim. (Cl. 170—135.24)

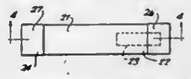
In a helicopter in combination, an upper rotor provided with rotatively mounted blades, a lower rotor provided with rotatively mounted blades, means including a drive shaft and a drive sleeve for rotating said rotors in opposite directions, a second sleeve coaxial with said first-mentioned sleeve and said drive shaft, a collar pivotally secured to said second sleeve, means pivotally connecting the hubs of said blades with said collar, means for tilting said collar to change the pitch of said blades during a cycle of rotation, and means for varying the relative position of said collar to vary the pitch on the blades of one of

said rotors with respect to the blades of the other of said rotors, said last-mentioned means including a third sleeve coaxial with said second sleeve and secured to said housing, and means for moving said last-mentioned sleeve in a vertical direction with respect to the horizontal plane of rotation of said rotor blades.



2,474,363
MOUNTING OF CELLULAR GLASS SLABS
John C. Kohl, Pittsburgh, and John A. Desmone, Springdale, Pa., assignors to Pittsburgh Corning Corporation, a corporation of Pennsylvania
Application November 19, 1943, Serial No. 510,934
2 Claims. (Cl. 72—19)

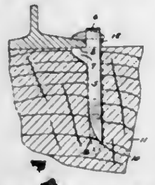
1. A heat insulative wall comprising a pair of spaced parallel supporting bars, the bars each having an outwardly projecting web and a flange on the web of one bar, said flange extending toward the second bar, the side of the web of the second bar facing the first mentioned bar being essentially smooth and further having pin receiving openings formed therein, a course of cellulated glass slabs supported by the bars, said slabs at one edge having tongue portions hooked under said flange to prevent outward displacement of the slabs, the edges of the slabs opposite said tongues being adapted to tilt back within space between the bars in proximity to the web of the second bar and pin means in the openings in the web of the latter bar projecting into the edges of the blocks to hold the latter edges in place.



2,474,364
AUTOMATIC WELL POINT
Thomas F. Moore, Morris Plains, N. J.; Edward J. Moore and Mary Moore Dacey, executors of said Thomas F. Moore, deceased, assignors, by mesne assignments, to Moretrench Corporation, Rockaway, N. J., a corporation of New Jersey
Application December 4, 1944, Serial No. 566,409
20 Claims. (Cl. 166—5)

1. In a well point, comprising an elongated tubular body having liquid inlet openings in the wall thereof at spaced intervals along its length, closure means at opposite ends of the body defining therebetween a float chamber within the body normally in communication with the exterior of the body through the inlet openings aforesaid, means forming at least one open-ended jetting-and-suction passage within the tubular body, said latter means being extended from one closure means aforesaid at the top of the tubular body to the other closure means at the bottom end, through the float chamber, to isolate the jetting-and-suction passage from the float chamber, the lower of said closure means having a passage therethrough for establishing and interrupting communication between the float chamber and the lower end of the jetting-and-suction passage, a jetting tip connected to the lower end of the tubular body and forming a continuation thereof, and check-valve means disposed within the jetting tip and operable to open position responsive to the passage of a jetting fluid downwardly through the jetting-and-suction passage, the combination of a valve for the passage through the lower closure means, said valve

being positioned outside the float chamber and movable towards and away from the lower side of said closure means to respectively close and open the passage, said valve also being aided towards its passage closing position by the back pressure of the jetting fluid acting thereagainst, and a float in the float chamber operatively connected to the valve to close the same upon falling of the liquid level in the float chamber.

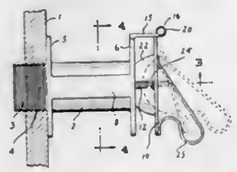


2,474,365
GAME BLOCK OF NONMAGNETIZABLE MATERIAL HAVING A MAGNETIZABLE STRIP CONCEALED IN ONE END THEREOF
Elvin R. Munn, St. Louis, Mo.
Application January 28, 1946, Serial No. 643,863
3 Claims. (Cl. 273—130)

2. In a game apparatus including a game board having a plurality of colored areas thereon and a magnet adapted to move game pieces into and out of the colored areas in said game board; a game piece comprising an elongated block of non-magnetizable material, and a magnetizable strip concealed in one end of said block, the ends of said block being so spaced as to prevent the ends of the magnet from extending between both ends of the block at the same time whereby a player must select the end of the block having the strip concealed therein before the magnet can be manipulated to move the block to a selected colored area on the game board.

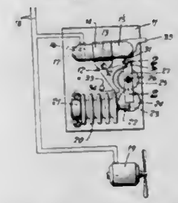
2,474,366
SAFETY LOCK FOR RAILROAD SPIKES
William T. Morris, Breckenridge, Tex.
Application May 13, 1947, Serial No. 747,724
1 Claim. (Cl. 238—375)

The combination with a railway rail and rail securing spike, of a spike retaining device comprising a body portion embodying spaced legs, a head connecting the upper ends of the legs, lugs extending forwardly from the legs adjacent to the head in spaced relation with the head, said legs and lugs adapted to be driven into a tie with



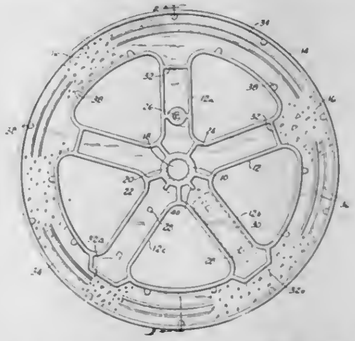
which the retaining device is used with the upper surfaces of the lugs resting against the bottom of the rail, and the head overlying the spike in contact therewith, normally holding the spike against upward movement.

2,474,367
METHOD OF TREATING HYDROPHILIC COLLOIDS TO AVOID SWELLING DURING WASHING
William D. Ramage, Berkeley, Calif., assignor to United States of America as represented by the Secretary of Agriculture
No Drawing. Application April 22, 1947, Serial No. 743,211
12 Claims. (Cl. 260—112)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A process comprising washing an organic hydrophilic colloidal substance contaminated with water-soluble impurities, the swelling capacity of which colloidal substance increases as the concentration of electrolytes is decreased, with an aqueous solution of a salt of ammonia and a weak, volatile acid, said salt being vaporizable at a temperature below that at which the colloidal substance is degraded, and subsequently drying the washed colloidal substance and removing the salt by vaporization.

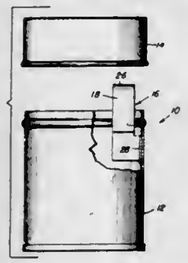
2,474,368
SELF-FEEDER ATTACHMENT
Gunther Rankenburg, Millville, Minn.
Application April 22, 1946, Serial No. 663,861
2 Claims. (Cl. 251—10)



1. An animal-operated feed valve including a hollow body having attaching threads formed upon one end and an annular valve seat on its opposite end, an anchoring flange formed about said body adjacent said threads, an annular flange formed about the opposite end of said body, oppositely disposed guard strips connected between said flanges, an outwardly extending lip on said last-mentioned annular flange, a disk-shaped valve closure plate hinged upon said lip, a semi-spherical shaped valve closure supported by said valve closure plate, and resilient tensioning means between said valve closure plate and said anchoring plate disposed interiorly of said guard strips for normally holding said valve closure upon its valve seat.

2,474,369
AIR CIRCULATION CONTROL SYSTEM
William A. Ray, Los Angeles, Calif., assignor to General Controls Co., a corporation
Application August 19, 1944, Serial No. 550,160
3 Claims. (Cl. 98—1)

1. In a system for cooling a house by circulation of outdoor air to the interior of the house: means for effecting said circulation of air, electrically-operable means for operating said circulation-effecting means, switching means for controlling said electrically-operable means and biased to circulation-stopping position, means manually movable to a position to set said switching means in circulation-starting position, means responsive to the temperature of the house for so operating said movable means as to trip the switching means to circulation-stopping position upon rise of house temperature, and means for maintaining said temperature responsive means continuously in operative relation to said movable means so that the switching means is tripped upon any rise of house temperature, said maintaining means including means forming a slip-clutch.

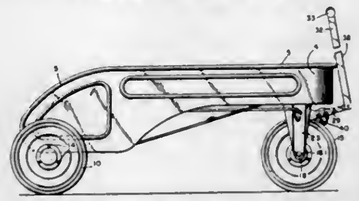


2,474,370
FLYWHEEL
Stanley D. Russell, Racine, Wis., assignor to J. I. Case Company, Racine, Wis., a company of Wisconsin
Application July 8, 1947, Serial No. 759,587
4 Claims. (Cl. 74—572)

1. A flywheel comprising a hub, a rim and spokes having channeled cross sections with the open faces thereof normal to the axis of the flywheel, a plurality of ribs bridging the spoke chan-

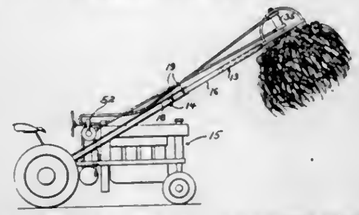
nels at the ends thereof adjacent the rim whereby to provide a continuous rim channel discontinuous with the several spoke channels, means within the rim channel for securing a hardenable substance that may be poured thereinto, and means for securing a balancing weight to the flywheel within the channel of one of said spokes, said ribs being positioned to permit a greater weight of the hardenable substance to be poured into the rim channel on the side of the wheel opposite said one spoke then on the side of said one spoke.

2,474,371
ASH RECEIVER
Paul W. Rushforth, Honolulu, Territory of Hawaii
Application October 29, 1946, Serial No. 706,293
1 Claim. (Cl. 131—242)



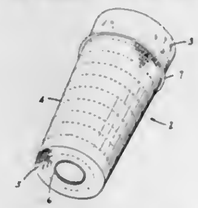
An ash receiver comprising in combination, a receptacle, a cover removably positioned on said receptacle, a pair of juxtaposed straps secured together at one end portion thereof, the remaining end portions of said straps being angulated in mutually divergent relation and terminating in inwardly arcuated extremities adapted to retain a cigarette therebetween, and a pair of laterally projecting wings provided on the secured end portions of said straps, said wings being secured to the inner surface of said receptacle and the arcuated end portions of said straps projecting above said receptacle into said cover.

2,474,372
BUCKLE
Lester C. Schmith, Sacramento, Calif.
Application February 12, 1946, Serial No. 647,089
2 Claims. (Cl. 24—206)



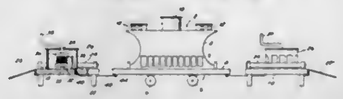
1. In a buckle for wrist watch straps or the like, including an open-ended case having bottom, top and side walls, a separate tongue slidable in said case along said bottom wall, and a field of ratchet teeth formed on an upper surface of said tongue; said upper surface of said tongue and said field being downwardly spaced from said top wall, a leaf spring having one end fixed to said top wall, a free end of said spring being inclined downwardly to a position to engage said ratchet field, a cover plate for said case overlying said top wall, means connecting said plate and case to permit upward movement of said plate relative to said case, and said means including a rigid connection between said plate and said free end of said spring whereby upward movement of said plate is operative to raise the said free end of said spring above the plane of said ratchet field.

2,474,373
TOY WAGON
Herman L. Seiden, Chicago, Ill., assignor to Saul Patner, Chicago, Ill.
Application March 30, 1946, Serial No. 658,531
3 Claims. (Cl. 280—87.01)



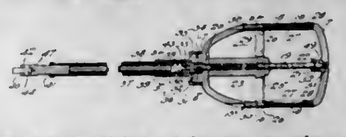
3. A child's wagon and scooter comprising a bed, a vertically disposed panel secured to the rear end of the bed, a platform secured to the lower edge of said panel and lying in a plane below the horizontal plane of said bed, a rear axle carried by said platform and wheels carried thereon, a front wheel and axle carried by said bed, a front steering mechanism comprising a bolster plate secured to the front underside of said bed, a bearing plate rotatably positioned on said bolster plate, wheel mounts depending from said bearing plate, said axle for said front wheel being anchored to and between the front ends of said wheel mounts and said front wheel being positioned therebetween, a handle well rigidly secured to and extending forwardly from said wheel mounts, and a rear steering mechanism comprising a vertically extending tube, a rear handle well rotatably mounted in said tube, a steering arm integrally secured to the lower end of said rear handle well and steering rods connected to said steering arm and said front wheel mounts whereby said front and rear steering mechanisms are synchronously connected together and operate as a single unit.

2,474,374
HYDRAULIC HAYFORK
De Witt C. Shattuck, Velva, N. Dak.
Application March 19, 1948, Serial No. 15,851
3 Claims. (Cl. 214—147)



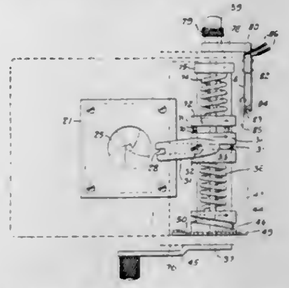
1. A hay fork in the form of a grapple adapted to be carried by a boom on a tractor comprising a ring, a head mounted for reciprocation below said ring and in line with the center thereof, shanks having the inner ends radiating from and pivotally connected to the head, means pivotally suspending the outer ends of the shanks in spaced relation from the under face of the ring, a rod connected to and rising from the center of the head, a piston attached to the upper end of the rod, a cylinder, a curved brace bar connected to and rising over the ring, means securing the upper end of the cylinder to the brace bar, the piston being mounted in the cylinder, means causing reciprocation of the piston for rocking the shanks and likewise the tines, means connecting the ring to the boom, and curved tines projecting downwardly from the outer ends of the shanks.

2,474,375
SHAPED FABRICATED ARTICLE
Howard E. Shearer and John E. Van Nest, Swarthmore, Pa., assignors to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application April 5, 1945, Serial No. 586,802
6 Claims. (Cl. 66—171)



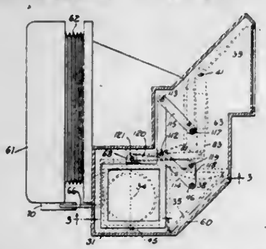
1. An assembly consisting of a shaped object having a peripheral wall and a flat bottom end wall, and a removable knitted jacket for the object, said jacket having a peripheral wall and a bottom end wall having a centrally disposed substantially circular opening therein, the jacket comprising courses of yarns formed from thermoplastic fibers having a relatively low shrinkage temperature, said thermoplastic fibers being heat-shrunk and stiffened, the walls of the jacket being provided with rolled rims comprising heat-shrunk and stiffened thermoplastic fibers, and the bottom wall of the jacket lying flat against the bottom wall of the shaped object.

2,474,376
TOY FERRY SYSTEM
William L. Shepheard, Norfolk, Va.
Application March 26, 1946, Serial No. 657,134
3 Claims. (Cl. 46—96)



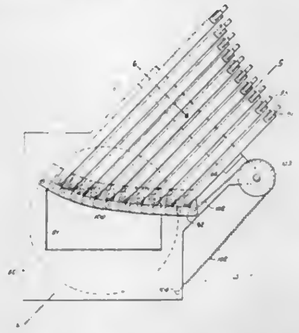
1. A toy ferry boat and dock system, comprising a wheeled toy boat simulating a ferry boat and having an end simulating a vehicle loading arrangement, a toy dock having an end simulating a vehicle loading arrangement for cooperation with the end of the ferry boat, a housing on the dock simulating a toll house, a shaft in said housing mounted for rotation about a vertical axis and having a portion extending exteriorly through the roof of said housing, a reel in said housing carried by said shaft, string guide means extending through said dock to the under side thereof, and a string or the like pulling element attached to said ferry boat and running to the under side of said dock, through said guide means and to said reel, whereby to pull said ferry boat to said dock upon rotation of said crank.

2,474,377
RATCHET DRIVE FOR TOOLS
George G. Shurtleff, Panama City, Fla.
Application August 3, 1946, Serial No. 688,364
10 Claims. (Cl. 74—127)



8. In a tool driving mechanism, an elongated yoke having side and end portions and forming a handle, a ratchet screw rotatably journalled in said end portions, a coacting ratchet sleeve slidable on said screw, a transversely extending hand grip on said sleeve, the side portions of said yoke being formed with laterally slotted and longitudinally extending bores, the end portions of said hand grip terminating in guides slidable in said bores, adjustable stops and compression springs in said bores, said springs engaging said guides and urging the same toward said stops, and means for operatively connecting said screw to a tool.

2,474,378
POWER-DRIVEN FLASH SYNCHRONIZER FOR PHOTOGRAPHIC SHUTTERS
Alfred Simmon, Jackson Heights, and Louis L. Weisglass, New York, N. Y., assignors, by direct and mesne assignments, to Simmon Brothers, Inc., Long Island City, N. Y., a corporation of New York
Application April 21, 1945, Serial No. 589,484
5 Claims. (Cl. 95—11.5)

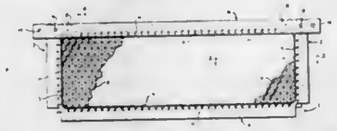


1. In a photographic camera, a shutter and a flash lamp synchronizer; the shutter comprising a number of pivoted blades and a motor unit adapted to actuate said blades to effect an exposure, said motor unit including a flywheel and a spring, means to tension said spring, and means to hold said spring releasably under tension; the synchronizer comprising a flash lamp, a set of normally open contacts, in series with a source of current and the flash lamp, and a second motor unit adapted to close said contacts, said second motor unit including a flywheel and a spring, means to tension said spring, and means to hold said spring releasably under tension; and means to release the springs of both motor units simultaneously; one of the elements of the motor unit of the shutter and one of the elements of the motor unit of the synchronizer being in physical contact with each other before release of the springs, said elements losing their physical contact immediately after said release.

2,474,379
CAMERA VIEW AND RANGE FINDER
Alfred Simmon, Jackson Heights, N. Y., assignor to Simmon Brothers, Inc., Long Island City, N. Y., a corporation of New York
Application June 26, 1946, Serial No. 679,334
5 Claims. (Cl. 95—44)

1. In a camera comprising two main parts and means to adjust their relative distance, one part supporting a camera lens and the other part supporting a sensitized film, a rangefinder of the brilliant type comprising a structure supporting one field lens, a first and a second optical system, cooperating to show two supplementary part images of the object to be photographed, and means to shift, in coordination with said first named adjusting means, said part images into mutual register, said field lens being a positive lens, arranged in a substantially horizontal plane and adapted to be viewed by both eyes of the observer from a convenient reading distance, the line of vision being substantially vertical and at right angles to the axis of the camera lens, said first optical system comprising a first reflector, a second reflector, a first image forming lens and a third reflector, said second optical system comprising a second image forming lens and a fourth reflector, said first reflector mounted closely underneath said field lens but covering less than the full area of said field lens and being forwardly inclined, forming an angle of substantially 45° with the substantially vertical line of vision and reflecting it in a forward direction substantially horizontal and parallel to the axis of the camera lens, said second reflector arranged in front of said first reflector in a substantially vertical plane, forming an angle of substantially 45° with the axis of the camera lens and with the now forwardly directed line of vision, reflecting it into a lateral direction substantially horizontal and at right angles to the axis of the camera lens, said first image forming lens being a positive lens, laterally offset in a horizontal direction with respect to said second reflector and arranged in a substantially vertical plane substantially parallel to the axis of the camera lens, said third reflector laterally offset with respect to said second reflector in the same horizontal direction as, but farther away than said first image forming lens, arranged in a plane substantially parallel to said second reflector and reflecting the now laterally horizontal line of vision again forwardly in a substantially horizontal direction, substantially parallel to the axis of the camera lens, said second image forming lens being a positive lens, arranged underneath said field lens in a substantially horizontal plane, but at a lower level than said above mentioned first reflector, said fourth reflector mounted underneath said second image forming lens and being forwardly inclined, forming an angle of substantially 45° with the substantially vertical line of vision and reflecting it in a forward direction substantially horizontal and parallel to the axis of the camera lens, said means to shift the two part images into mutual register comprising means to rotate said third reflector on a substantially vertical axis, thereby deviating the light beam accepted by the first optical system in a substantially horizontal plane, and simultaneously to rotate said fourth reflector on a substantially horizontal axis, thereby deviating the light beam accepted by said second optical system in a substantially vertical plane, the means to rotate said reflectors comprising pivoted supports for either reflector, and said means to coordinate the shifting of the two part images with the first named means to adjust the relative distance of the first main camera part supporting the camera lens and the second main camera part supporting the sensitized film comprising a lever attached to one of said rotatable reflector supports, said lever equipped with a straight cam surface, the extension of which passes through the axis of rotation of said support, and a member with a knife edge in operative contact with said straight cam surface, the above named structure supporting the rangefinder connected to one of said main camera parts and said member with the knife edge connected to the other main camera part.

2,474,380
DEVICE FOR MODIFYING ELECTRICAL SIGNALS
Alfred Simmon, Jackson Heights, N. Y., assignor to Simmon Brothers, Inc., Long Island City, N. Y., a corporation of New York
Application December 12, 1947, Serial No. 791,439
2 Claims. (Cl. 250—41.5)

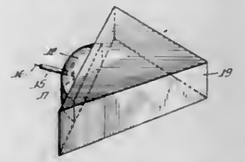


1. A mask with an adjustable aperture, adapted to be placed between the screen of a cathode ray tube and a photoelectric cell in a device for modifying electrical signals, said mask having an apertured frame, and the following elements supported by said frame, a plurality of movable cams, including means to move them in unison, a plurality of elongated members, each with a first and a second end, said members adapted to slide in parallel tracks, a plurality of links, attached to each other and forming a chain adjacent to said aperture and covering part of it, and means, including spring biasing means operating on said links, adapted to establish operative contact between said chain and the first ends of said slidable members, and between the second ends of said slidable members and said cams, whereby more or less of the light passing width of said aperture is covered by said links and said members in accordance with the positions into which said cams are placed by the operator relative to said members.

2,474,381
CONCRETE COMPOSITION AND PROCESS FOR PRODUCTION THEREOF
Frank Sladick, Sr., Solvay, N. Y.
No Drawing. Application July 2, 1948, Serial No. 36,810
8 Claims. (Cl. 106—96)

6. A concrete for use in the building arts, which comprises a water slurry of a concrete mix consisting of substantially equal parts of lime waste from ammonia stills operating in the Solvay process for making sodium carbonates, comminuted glass, and Portland cement, together with liquid coal tar in proportions of approximately one pint of the tar to twenty-five pounds of the concrete mix on a dry basis.

2,474,382
BEE COMB FOUNDATION FRAME
Luton Baxter Smith and Nellie B. Smith, High Point, N. C.
Application September 21, 1945, Serial No. 617,738
2 Claims. (Cl. 6—10)

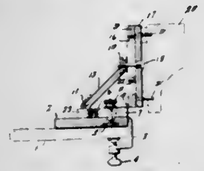


1. In a bee comb foundation frame, the combination of a sheet metal frame, including a bottom section and two side sections, said bottom and side sections being U-shaped in cross section throughout their length, said side sections being provided at their top with pairs of inwardly extending tongues, said tongues in each pair being in engagement, a metal cap section U-shaped in cross section throughout its length, said cap section placed over and receiving the upper ends of said side sections including said inwardly extending tongues, and said U-shaped sections also forming a continuous open structure for receiving freely the four edges of a foundation sheet.

2,474,383
WEEDLESS ARTIFICIAL FISH BAIT
Albert H. Suhr, Chicago, Ill.
Application December 20, 1948, Serial No. 66,256
6 Claims. (Cl. 43—37)

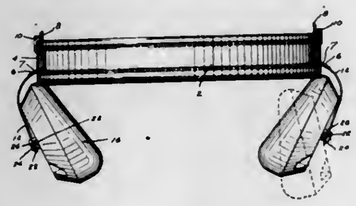
3. As a new article of manufacture, a weedless variety artificial fish bait comprising an elongated body having a longitudinal slot in its central and rear portions and a longitudinal open ended bore extending through its front portion and leading to the front end of the slot, a rod extending slidably through the bore and into the front end of the slot and provided at its front end with means for attachment to a fish line, a U-shaped frame disposed in the front end of the slot and embodying a crosspiece fitting against the portion of the body that defines the front end of the slot and in addition a pair of spaced apart side pieces connected to, and extending rearwards from the ends of the crosspiece and provided inwards of their rear ends with transverse holes, a slide block connected to the rear end of the rod and mounted between said side pieces so that it and the frame have relative sliding movement, a pair of oppositely disposed hooks extending lengthwise of the slot, consisting of forwardly disposed shank parts and rearwardly disposed hook parts, having the front ends of its shank parts extending inwards through the aforesaid holes and connected pivotally to the slide block, and adapted when the frame and body slide rearwards relatively to the slide block and rod to swing into an operative position wherein the hook parts thereof are disposed exteriorly of the body and when the frame and body slide forwardly relatively to the slide block and rod to swing into an inoperative position wherein said hook parts are disposed within the rear end of the slot, and a spiral compression spring extending around the rear end of the rod, having the front end thereof in abutment with the crosspiece on the frame and the rear end in abutment with the front end of the slide block and adapted to urge the frame and body forwards with respect to the slide block and rod and thus normally to maintain the hooks in their inoperative position.

2,474,384
HIGH-FREQUENCY RADIANT ENERGY ABSORBING DEVICE
David E. Sunstein, Elkins Park, Pa., assignor to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application April 28, 1944, Serial No. 533,233
3 Claims. (Cl. 250—33.63)



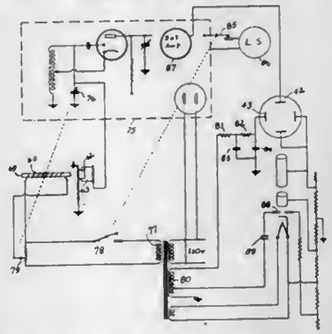
1. Apparatus for simulating the transmission of ultra high frequency energy into free space, comprising a radiation device to which said energy may be supplied, and a horn having an open mouth arranged to receive energy radiated from said device and adapted to absorb substantially all of said energy, said horn tapering from a dimension considerably greater than cut-off to a dimension less then cut-off for the frequency range of said energy.

2,474,385
TYPEWRITER SUPPORT
Jalva Vale, Birmingham, Ala.
Application April 8, 1944, Serial No. 530,214
9 Claims. (Cl. 248—23)



1. A typewriter support comprising a base, a carriage, means for mounting a typewriter on said carriage, and means including pivotally and slidably interconnected elements interposed between said carriage and base for mounting said

carriage on said base for universal movement with respect thereto so that the typewriter can



be positioned with its keyboard at various inclinations to the horizontal.

2,474,386
HEADBAND AND EARPHONE MOUNTING
John Volkmann, Cambridge, Mass., assignor to the United States of America as represented by the Secretary of War
Application June 19, 1944, Serial No. 541,008
4 Claims. (Cl. 179—156)

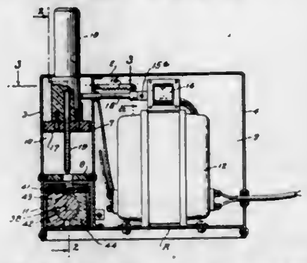
1. A headband and earphone mounting comprising a flat steel spring headband of inverted U-shape constructed and shaped to engage over and across the head of a person with its ends planiform and parallel at the sides of the head of, and forwardly of the ears of the person, L-shaped adjustable slides having broad, flat arms, one in a plane with and telescopically engaged with the respective end of the headband, the other arm of the slide being extended laterally outwardly from the plane of the end of the head band and thence rearwardly to form a horizontal planiform earphone support arm broadened in a vertical plane offset from the plane of the adjacent end of the head band and convergent rearwardly theretoward, coaxial vertical stud-like trunnions formed at the upper and lower edges of the earphone support arm, an earphone frame plate member constructed for fixed attachment to the outer side of an earphone, upper and lower parallel ears formed thereon slightly above and below the earphone support arm, and having respective slots therein to receive loosely therethrough respective trunnions, the slots being both elongated in a direction normal to the plane of the plate a distance sufficient for limited sliding movement of the trunnions therein whereby an earphone on the plate may pivot on a horizontal axis through an angle limited by engagement of the trunnions at the ends of said slots, said trunnions being revoluble on their axis in the slots, said offset arm being extended beyond said axis a distance sufficient to limit rocking of a mounted earphone on said trunnion axis as required.

2,474,387
VIBRATING REACTANCE PANORAMIC RADIO RECEIVER
Marcel Wallace, New York, N. Y., and Horace G. Miller, Belleville, N. J., assignors, by mesne assignments, of one-half to Marcel Wallace, New York, N. Y., doing business as Panoramic Laboratories, New York, N. Y., and one-half to Panoramic Radio Corporation, New York, N. Y., a corporation of New York
Original application July 17, 1941, Serial No. 402,822, now Patent No. 2,381,940, August 14, 1945. Divided and this application December 11, 1943, Serial No. 513,895
16 Claims. (Cl. 250—20)

5. A panoramic receiving system including a signal receiving channel, means for periodically tuning said channel, said means comprising a mechanically vibrating element, a source of alternating sinusoidal voltage, means for energizing said vibrating element to vibrate in synchronism with said source of alternating sinusoidal voltage, visual means comprising a cathode ray tube having means for generating a cathode ray beam, for displaying signals received in said signal receiving channel, and means for applying said alternating sinusoidal voltage to said cathode ray beam for separating displayed signals by space intervals in accordance with the respective frequencies of the displayed signals.

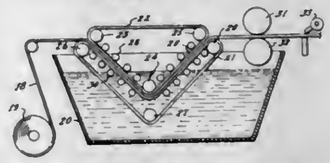
2,474,388
DOLL STROLLER
Arthur A. Wasserman, Boston, Mass., assignor of one-half to Louis Cohen, Quincy, Mass.
Application February 25, 1948, Serial No. 10,697
3 Claims. (Cl. 280—36)

1. A wheeled toy which includes a pair of U-shaped supporting frames the legs of one of which cross those of the other, said legs being



joined at their intersections, an axle extending transversely of each supporting frame adjacent the bight portion thereof, wheels on the axles, a rectangular seat frame fixed to the legs of the supporting frames adjacent the ends thereof remote from the bight portions and an inverted U-shaped handle pivotally coupled to the legs of one of the supporting frames, a side frame extending upwardly from each side of the seat frame and a back extending upwardly from the end of the seat frame adjacent the handle, an inverted U-shaped top frame the lower ends of the legs of which are secured to the side frames intermediate the forward and rear ends thereof, and bows connecting the bight portion of the top frame with the upper rear corners of the side frames.

2,474,389
FOUNTAIN PEN
Russell T. Wing, Excelsior, Minn.
Application October 26, 1945, Serial No. 624,793
11 Claims. (Cl. 120—46)



1. In a fountain pen of the type described a barrel having an ink reservoir therein, an ink feeding passage communicating with said ink reservoir, an overflow ink collector also communicating with said ink reservoir, operating means for filling said ink reservoir, a cap adapted to be attached to the rear end of said barrel, said operating means being normally operable, with said cap removed, between limits of operation to cause said ink reservoir to be reduced to a minimum capacity and enlarged to a capacity less than maximum capacity, and means including a part on said cap and a part on said operating means for transmitting motion from said cap to said operating means in response to movement of said cap on said barrel toward its closed position on said barrel for actuating said filling means to cause said ink reservoir to be enlarged to its maximum capacity whereby ink is drawn from said collector into said reservoir.

2,474,390
HOT DOG MACHINE
Albert E. Aff, South San Francisco, Calif.
Application March 27, 1946, Serial No. 657,475
5 Claims. (Cl. 219—19)

1. A package for a food product comprising an insulating carton having a pair of electrodes disposed one adjacent each end thereof, each electrode comprising a prong extending into the carton in position to engage a product therein and a terminal member adapted to be engaged on the exterior of the carton.

2,474,391
PROCESS FOR PRODUCING PACKING STRUCTURES
Samuel Bergstein, Cincinnati, Ohio, assignor to Robert Morris Bergstein and Frank David Bergstein, trustees
Original application November 30, 1944, Serial No. 565,888. Divided and this application October 26, 1945, Serial No. 624,713
5 Claims. (Cl. 18—56)

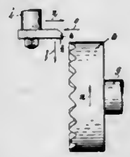
5. A process of molding paperboard which comprises passing paperboard briefly through a bath of water and immediately between press rollers acting to drive some of the water into the board and to remove surface excess, shielding portions of the board from the water as it passes through the bath so as to produce relatively wet and dry areas in the board, then molding the board between heated die members maintained in contact therewith until the board has lost sufficient moisture to retain its molded shape, and including the step of molding large, deep configurations in the relatively wet areas of the board and corrugations in the relatively dry areas of the board, said corrugations in the relatively dry areas of the board being smaller, shallower, and more closely spaced than the configurations in the relatively wet areas of the board whereby to contract the board in one direction approximately the same amount, the board being passed through the bath in a continuous length and cut apart into sheets before molding.

2,474,392
PROCESS OF PREPARING A WATER-SOLUBLE BERYLLIUM COMPOUND
Perle N. Burkard and Ralph McNabney, Wyandotte, Mich., assignors to Wyandotte Chemicals Corporation, Wyandotte, Mich., a corporation of Michigan
No Drawing. Application April 26, 1944, Serial No. 532,886
5 Claims. (Cl. 252—156)

1. In the process of preparing a water-soluble beryllium compound, the step of heating at atmospheric pressure between 250 and 320° C. powdered beryl with anhydrous sodium hydroxide in the ratio of at least 32 mols of the latter to 1 mol of the former and with between slightly less than 2% and below 5% water content initially present in said mixture, and continuing such heating until a water-soluble beryllium-containing product is formed.

2,474,393
METHOD OF GENERATING CLUTCH TEETH FOR EXTENDED INTIMATE CONTACT
Neal L. Cobb, Springfield, Vt., assignor to The Fellows Gear Shaper Company, Springfield, Vt., a corporation of Vermont
Application April 17, 1942, Serial No. 439,358
3 Claims. (Cl. 90—8)

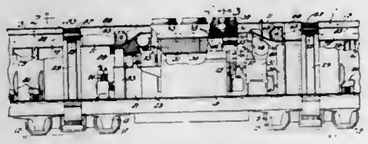
1. The method of generating face clutch teeth with radial helicoidal side faces, which consists in effecting relative reciprocation between a cutter and a face clutch blank axially of the blank,



effecting relative rotary movement around the

ends but that they remain parallel to the other one of the pair throughout their lengths to utilize

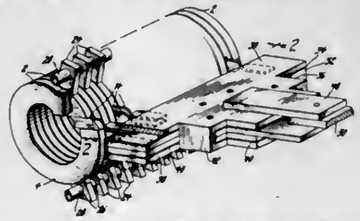
of said body and cover portions, said extensions having oppositely arranged grooves in their outer



rapid movement of the movable element when adjacent the open position thereof and increased

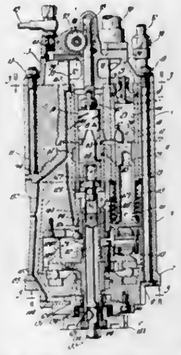
effecting relative rotary movement around the axis of the blank with a timed relation between said movements such that the resultant thereof is the generation of a succession of connected sloping lines of alternately opposite inclination in a circumference of the blank, effecting re-

peated cutting traverses between the tool and clutch blank in a path perpendicular to the axis of the blank, and offsetting the cutting extremity of the cutter to bring tangent points at opposite sides of its median line alternately in a path intersecting and perpendicular to said axis.



2,474,394
HEATING AND VENTILATING SYSTEM
Richard M. Dilworth, Hinsdale, Ill., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application July 19, 1946, Serial No. 685,001
12 Claims. (Cl. 237—12.6)

1. In a vehicle an engine, a radiator associated therewith, and an air duct including said radiator, an air inlet opening, an air discharge opening, a hot air outlet connection, a discharge fan, a heating fan and means operable in response to operation of said discharge fan to permit discharge of heated air through the discharge opening from said radiator, said means normally preventing reverse flow through said discharge opening upon operation of said heating fan to force heated air through said hot air outlet connection from said radiator.

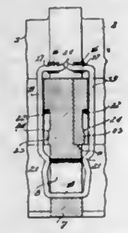


2,474,395
HIGH-FREQUENCY TRANSFORMER
Harold C. Early, Beaverton, and William G. Dow and Robert Ohlsson, Ann Arbor, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application September 20, 1945, Serial No. 617,614
5 Claims. (Cl. 175—356)

3. In transformer means for use with high frequency current, a primary winding in the form of a helix with the turns axially separated, a plurality of single turn secondary windings interposed between the primary turns to form a cylindrical member, the ends of one secondary turn lying adjacent the ends of each secondary turn on opposite sides thereof, conductor strips connected to each end of each secondary turn resulting in a series of closely spaced parallel pairs, said strips being twisted so that their extending ends are at right angles to their inner ends but that they remain parallel to the other one of the pair throughout their lengths to utilize

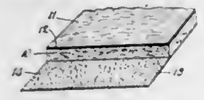
the proximity effect and a plurality of conductive terminal plates connected to the extending ends.

2,474,396
INJECTION PUMP
Ronald C. Groves, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application March 1, 1945, Serial No. 580,347
9 Claims. (Cl. 103—41)



1. A fuel injection pump comprising a cylinder having an automatic fuel inlet valve, axially spaced delivery ports, and a fuel by-pass and relief port spaced axially therefrom, a plunger reciprocable in the cylinder and having a control surface adapted to open and close each delivery port each stroke of the plunger, and a valve operated in timed relation with said plunger and adapted to shut off said by-pass and relief port during the inlet stroke of the plunger to cause opening of the fuel inlet valve and to open and close the by-pass or relief port during the pumping stroke so that fuel is by-passed from the cylinder prior to and pressure is relieved subsequent to delivery of fuel through each delivery port at different points in the delivery stroke of the plunger.

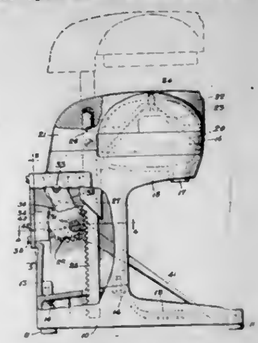
2,474,397
FASTENING MEANS FOR CAMERA COVERS
Julius A. Henne, Rochester, N. Y., assignor to Webster Industries, Inc., Webster, N. Y., a corporation of New York
Application March 20, 1947, Serial No. 735,984
2 Claims. (Cl. 292—91)



1. In a photographic camera, the combination with a case comprising separable body and cover portions, of overlapping extensions at the ends

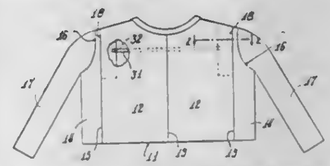
of said body and cover portions, said extensions having oppositely arranged grooves in their outer surfaces with locking recesses therein and the extensions on one of said portions having slots therein in alinement with said grooves, and a wire bail movable endwise in each of said slots

and having sides with locking projections movable in said grooves into locking engagement with said recesses, the bail being movable laterally away from said extensions and locking recesses when at the bottom of said slot to permit separation of the body and cover portions.



2,474,398
SURFACE FLUXING COATED LINER
Clark C. Heritage, Cloquet, Minn., assignor to Wood Conversion Company, St. Paul, Minn., a corporation of Delaware
Application April 21, 1943, Serial No. 483,897
17 Claims. (Cl. 154—33.05)

9. The method of making a creped sheet having resistance to the transmission of water-vapor, which comprises applying to sheet material to be creped a fusible substance having the property of resisting the transmission of water-vapor and having the property of being adhesive when hot and nearly solid, causing said coated sheet while in an adhesive condition to adhere to a creping roll and removing the sheet therefrom by a doctor blade to effect creping of the sheet, exposing the said coat material on the creped sheet to a fluxing heat and thereby fluxing at least the exposed surface of the coat, cooling the resulting coat to the point of adhesiveness and near-solidification while avoiding make-and-break adhesive contact with the coat during the cooling and while the coat is in the adhesive condition, and uniting the sheet to another element by the adhesiveness of the coat in the nearly solid condition.



2,474,399
FRUIT JUICE EXTRACTOR
Herbert C. Johnson, Wilmette, Ill.
Application December 18, 1944, Serial No. 568,642
16 Claims. (Cl. 100—42)

1. An extractor comprising fixed and movable squeezing elements, a rack connected to the movable element, a pinion for moving the rack, a hand lever for rotating said pinion, and means for rotatably and swingably supporting said pinion on an axis eccentrically thereof, whereby the distance from said axis to said rack varies to provide rapid movement of the movable element when adjacent the open position thereof and increased

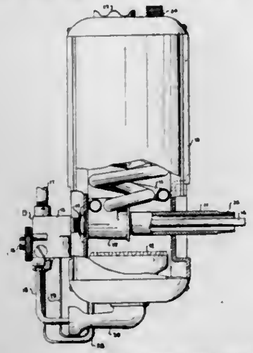
pressure between the elements when the movable element is adjacent its closed position.

2,474,400
GARMENT
Morris Michel, Chicago, Ill., assignor to Rothmoor Corporation, Chicago, Ill., a corporation of Delaware
Application January 31, 1947, Serial No. 725,573
1 Claim. (Cl. 2—93)

In a garment, a back portion fashioned from non-elastic material, a substantially rectangular pleat-flap on each side edge of the back portion coextensive with the part only that overlies the shoulders of a wearer, said pleat-flaps each being folded along a line contiguous with the respective side edge of the back portion against the inside face of the back portion, supplemental portions of non-stretchable material each having an extension on one edge corresponding in size and shape to the folded pleat-flaps, said supplemental portions being secured along the edges carrying the extensions to opposite side edges of the back portion, with their extensions underlying the folded pleat-flaps, the supplemental edges of the pleat-flaps and the extensions being secured together to provide the assembly with substantially rectangular pleats opening along the unsecured folded edge of the back portion, and stretchable means connecting the inner edges of the pleats, one with the other.

2,474,401
FLUID HEATER
Bernard E. Mustee, Cleveland, Ohio, assignor to E. L. Mustee and Sons, Inc., a corporation of Ohio
Application October 29, 1947, Serial No. 782,771
1 Claim. (Cl. 122—250)

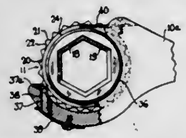
Fluid heater means comprising, fuel combustion burner means, water-conducting coil



means mounted above said burner means, an intake manifold including a conduit having an entrance end and a coil header end, said coil header

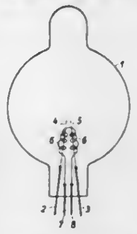
lever-recess, and being yielding so as to enable both dismounting and remounting of the head by relative movement of head and lever in the plane of the wrench structure.

stationary blades in the housing; a rear and a front end plate closing the ends of the housing; a shaft rotatively supported in the end plates; a tubular rotor mounted on the shaft in the housing; a plurality of rows of blades on the rotor; the



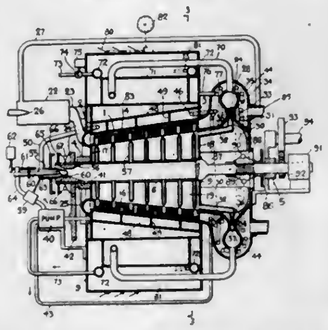
2,474,406
APPARATUS FOR REPRODUCING CHARACTERS AND THE LIKE
Stanley Horace Tillett, Wanstead, London, and Bert David Feild, Romford, England, assignors to Tillett's Cotton Marking Machines Limited,

means mounted above said burner means, an intake manifold including a conduit having an entrance end and a coil header end, said coil header end having coil attachment means securing said coil means in fluid-conducting relationship with said coil header end, said coil means defining a water-conducting path continuously spiraling downward to said intake manifold and providing a slide through which solid foreign matter can slide down into said intake manifold, said coil



header end forming a longitudinal continuation of said conduit portion substantially along a longitudinal axis common to said conduit portion and said header end, said coil header end having an axial opening, fuel-flow control means removably closing said axial opening and having a temperature responsive member extending within said conduit portion, said fuel-flow control means being removable from said coil header end to permit a cleaning tool to be passed through said conduit from the axial opening.

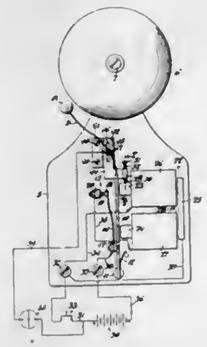
2,474,402
RATCHET MEANS
Maurice A. Napier, Akron, Ohio
Application July 12, 1945, Serial No. 604,605
7 Claims. (Cl. 74—156)



1. In a ratchet wrench the combination of a lever, and a head removably mounted on one end thereof, said head formed circumferentially with ratchet teeth having end faces that taper toward each other, and with trunnions at each side of the ratchet teeth, said lever formed with a recess of 180° extent in which said head is receivable, which recess comprises a groove having sides tapered complemental to the ratchet teeth and adapted loosely to contact the latter, there being bearing surfaces each side of said groove on which the trunnions of the head are seated, and ratchet means carried by the lever at relatively widely spaced points and engaging said ratchet teeth on the head for turning the latter when the lever is turned in one direction, said ratcht means including spring mechanism adapted normally to retain said head in said lever-recess, and being yielding so as to enable both dismounting and remounting of the head by relative movement of head and lever in the plane of the wrench structure.

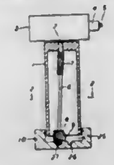
2,474,403
ARC LAMP AND ITS LOW-TENSION IGNITION
David Reichinstein, Zurich, Switzerland
Application March 18, 1944, Serial No. 527,053
In Switzerland October 15, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires March 8, 1963
3 Claims. (Cl. 315—278)

1. In an arc light radiating lamp comprising two main electrodes, a loop-shaped auxiliary electrode mounted in said lamp transversely and close to said main electrodes to generate an auxiliary arc between itself and one of said main electrodes, a single source of alternating current, a transformer having a single primary coil connected with said source, and a secondary coil consisting of two partial secondary non-uniform coils interconnected in series, means connecting the entire voltage of said coils of the transformer with said main electrodes, an impedance, means electrically connecting said impedance in series with said auxiliary electrode and the smaller of the two partial secondary coils, and a switch connected in parallel with said impedance, whereby the closing of said switch short-circuits said impedance.



2,474,404
COMBUSTION TURBINE
Sanford E. Richeson, Brooklyn, N. Y.
Application December 6, 1945, Serial No. 633,217
9 Claims. (Cl. 60—41)

9. In a combustion turbine the combination of a tubular housing; a plurality of rows of spaced



stationary blades in the housing; a rear and a front end plate closing the ends of the housing; a shaft rotatively supported in the end plates; a tubular rotor mounted on the shaft in the housing; a plurality of rows of blades on the rotor; the rear end plate having an intake opening and the the front end plate having an exhaust opening; a vessel in a communication with the intake opening and comprising a combustion chamber; means to admit a cooling medium into the rotor, the shaft being hollow at one end; tubular ducts extending radially from the shaft to the rotor blades; means to admit a vaporizable liquid fuel into the rotor and thereby obtaining vapors at a high pressure; a centrifugal compressor operated by the shaft; and means to admit the vapors into the combustion chamber.

2,474,405
SUSTAINED ELECTRIC SIGNAL OPERATING DEVICE
John W. Ritti, Los Angeles, Calif.
Application March 31, 1947, Serial No. 738,344
6 Claims. (Cl. 177—7)

1. An electric signaling device, comprising: a bell element; a vibratory armature adapted to strike said bell element; a primary electric circuit including a manually-operable primary switch and an electro-magnet having a core and a winding, said electro-magnet being energized, upon closing of said primary circuit in response to closing of said primary switch, to actuate said armature; electrical make-and-break means in said primary circuit for effecting intermittent energization of said electro-magnet; a secondary electric circuit connected in parallel with said primary circuit and including a manually-operable secondary switch for selectively closing and opening said secondary circuit; and electromagnetically-operable means included in said secondary circuit and operable, in response to energization of said winding by said primary circuit and after said secondary switch is closed, to contact said core to complete said secondary circuit through said core, said secondary circuit being connected to said primary circuit in such a manner that said winding remains intermittently energized to effect continuous vibration of said armature after said primary switch is opened and until said secondary switch is subsequently opened.

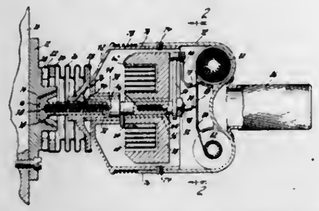
2,474,406
APPARATUS FOR REPRODUCING CHARACTERS AND THE LIKE
Stanley Horace Tillett, Wanstead, London, and Bert David Feild, Romford, England, assignors to Tillett's Cotton Marking Machines Limited, London, England, a British company
Application November 30, 1945, Serial No. 631,854
In Great Britain October 23, 1945
13 Claims. (Cl. 112—102)

1. In a tracing unit for use in connection with an automatic character reproducing machine, the combination of a toothed rack shaped to the form of the character to be reproduced, the direction of length of the teeth of the rack being substantially perpendicular to the general plane of the character, a driven pinion engageable with the rack and movable therealong as it rotates, means tending to maintain the pinion in mesh with the rack as it moves therealong, a rotatable driving member for the pinion, connected to the latter through a yieldable connection which affords to the pinion a freedom for universal movement in a plane substantially perpendicular to said direction of length, thereby enabling it to operate at either side of the rack and on reaching the end thereof to roll therearound from the one side of the rack to the other, said driving member being disposable with its axis of rotation substantially parallel with said direction of length, and guide means for the driving member whereby as the pinion is driven and in consequence is caused to move along the rack, carrying the driving member with it, the driving member is caused to follow a single-outline course which is determined by the shape of the rack and is common to both sides of the rack as regards the operating position of the pinion in relation thereto.

2,474,407
POLARITY INDICATOR PLUG
William L. Todd, Fort Thomas, Ky., and Elbert E. Greenberg, Cincinnati, Ohio, assignors to The Kelley-Koett Manufacturing Co., Covington, Ky., a corporation of Ohio
Application January 15, 1945, Serial No. 572,886
8 Claims. (Cl. 177—311)

1. A polarity indicator plug for electric outlet receptacles comprising a casing, prongs projecting from the casing for insertion into the sockets of the receptacle, a glow type lamp housed in the casing, said casing having at least one aperture through which it may be viewed, an impedance

in the casing connected in series with the lamp, a conductive element exposed on the casing, said element, the lamp and the impedance being con-

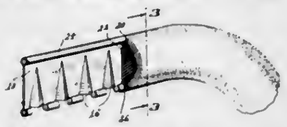


tending along each of its side edges, and transverse corrugations in the body strip between said beads and spaced substantially apart along the

2,474,412
SOAPLESS-GERMICIDALLY ACTIVE DETERGENT
Frederick C. Bersworth, Verona, N. J.

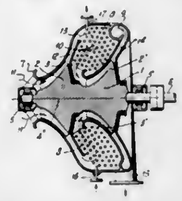
horizontally disposed bent portion extending from said horizontal arm in the opposite direction with respect to said parallel supporting members, a

in the casing connected in series with the lamp, a conductive element exposed on the casing, said element, the lamp and the impedance being connected in series with one of the prongs.



2,474,408
TORSIONAL VIBRATION EXHIBITING MEANS
Thomas C. Van Degrift, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application March 19, 1945, Serial No. 583,528
8 Claims. (Cl. 346—7)

5. A portable vibration exhibiting device adapted to be applied to a rotating member having clutch means, said device comprising a housing member, a spindle rotatably carried by the housing member, an inertia mass rotatably carried within the housing member and driven by the spindle, means resiliently connecting the spindle and inertia mass to rotate the inertia mass at the average speed of the spindle, exhibiting means carried by the spindle and inertia mass for exhibiting angular movement between the spindle and inertia mass, clutch means having elements complementary to the first-mentioned clutch means, the second-mentioned clutch means being secured to and carried by one end portion of the spindle for rotation therewith and being adapted to engage the first-mentioned clutch means with a slip engagement to start rotation of the spindle when the device is applied to said rotating member while it is rotating and to drive the spindle positively when the speed of the spindle has been brought up to that of said rotating member, the complementary elements of the second-mentioned clutch means being biased axially outwardly from said end portion of the spindle, a second housing member telescopically mounted with respect to the first-mentioned housing member, supporting means carried by the second housing member for an element adapted to receive a record from the exhibiting means, and means normally biasing the second housing member to a position relative to the first housing member preventing the element from receiving a record, the last-mentioned means being overcome as the device is applied to said rotating member and the second housing member being moved relative to the first-mentioned housing member to a position enabling the record receiving element to receive a record from the exhibiting means.



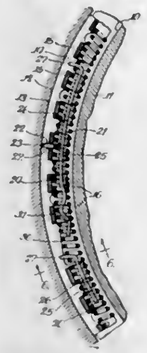
2,474,409
WEATHER STRIP
Frank R. Anderson, South Hampton, N. H., assignor to The Bailey Company, Inc., Amesbury, Mass., a corporation of Massachusetts
Application June 11, 1947, Serial No. 753,918
8 Claims. (Cl. 20—69)

2. In a weather strip for vehicle bodies and the like, a sheet metal body strip having a bead extending along each of its side edges, and transverse corrugations in the body strip between said beads and spaced substantially apart along the body strip, each said corrugation being formed between substantial plane body portions of the strip, and each being generally V-shaped in cross-section and having generally V-shape extent

from one end to the other thereof, whereby said body strip may be bent in its own plane with said corrugations closing to accommodate excess material at the smaller radius of the bend and without appreciable displacement of said substantial plane body portions of the strip out of their original plane.

2,474,410
MULTISTAGE COMPRESSOR
Georg Aue, Winterthur, Switzerland, assignor to Sulzer Freres, Societe Anonyme, Winterthur, Switzerland
Application December 8, 1945, Serial No. 633,745
In Switzerland January 13, 1945
6 Claims. (Cl. 230—209)

1. A multistage compressor comprising an impeller body having a cone shaped surface portion, vanes extending from said surface portion, a substantially cylindrical pressure casing surrounding said surface portion and forming an annular chamber of substantially triangular radial sectional configuration, and substantially annular cooling means disposed in said chamber and extending around the axis of rotation of said impeller body.



2,474,411
METHOD OF RECLAIMING THE HYDROCARBON CONTENT OF USED HYDROCARBON LUBRICANTS
Frederick C. Bersworth, Verona, N. J.
No Drawing. Application March 17, 1948, Serial No. 15,516
7 Claims. (Cl. 196—16)

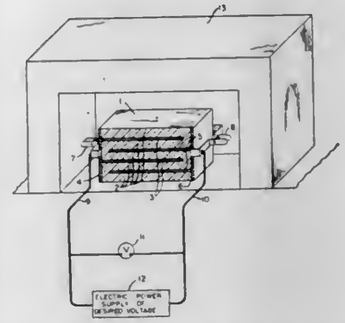
1. The method of treating used hydrocarbon lubricants and greases to recover the hydrocarbon compounds therein which comprise agitating the said hydrocarbons while in liquid phase for an extended time interval with an aqueous solution containing ethylene diamine tetra-acetic acid and an alkali metal hydroxide in such relative amounts providing not less than two and not over four molar weights of the alkali metal base for each molar weight of the acid and then separating the hydrocarbons from the aqueous solution.

2,474,412
SOAPLESS-GERMICIDALLY ACTIVE DETERGENT
Frederick C. Bersworth, Verona, N. J.
No Drawing. Continuation of application Serial No. 724,250, January 24, 1947. This application September 16, 1947, Serial No. 774,422
7 Claims. (Cl. 252—106)

1. A germicidally active detergent composition for use in water containing water hardening constituents, said composition consisting of a mixture containing 10% to 30% of an alkali metal salt of ethylene diamine tetraacetic acid and from small amounts up to 25% of a quaternary ammonium salt of ethylene diamine tetraacetic acid, the quaternary ammonium cation of said salt being germicidally active, balance consisting of simple alkali metal detergent salts of the group consisting of phosphates, carbonates, silicates, borates, sulfates and mixtures thereof.

2,474,413
PISTON RING
Arthur M. Brenneke, New Castle, Ind., assignor to Perfect Circle Corporation, a corporation of Indiana
Application January 2, 1947, Serial No. 719,788
12 Claims. (Cl. 309—29)

1. A piston ring comprising a ring member having a gap, a spring positioned within said ring member and bearing radially outwardly thereon to expand said ring member, and means for holding said spring under load without expanding the ring member beyond a predetermined size when out of the cylinder, whereby said spring will exert a large expansive force on said ring member when confined within the cylinder, said means being operable to hold said spring under said load irrespective of the width of the gap in the ring member.

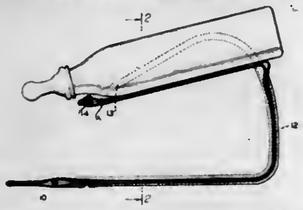


2,474,414
BRACKET FOR SHADES, CURTAINS, AND DRAPERIES
Salvatore A. Cavalier, Orlando, Fla.
Application January 21, 1946, Serial No. 642,499
1 Claim. (Cl. 248—257)

A double supporting bracket including an angle plate having a flat horizontal arm connected to an upwardly directed arm in the same plane therewith, a pair of substantially parallel supporting members for a curtain rod projecting horizontally from the upper end of the upwardly directed arm and perpendicularly from the surface thereof, a horizontally disposed bent portion extending from said horizontal arm in the opposite direction with respect to said parallel supporting members, a

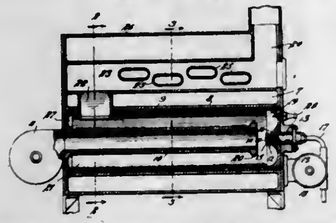
sleeve member slidably mounted thereon and having means for supporting a roller shade pintle, and means for fixing said sleeve member in any attained position along said bent portion.

2,474,415
DIELECTRIC STRENGTH TEST FOR CAPACITORS
Alden J. Deyrup, Westfield, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application September 18, 1945, Serial No. 617,183
3 Claims. (Cl. 175—183)



1. The method of testing the sufficiency of dielectric strength of an electrical capacitor constructed with ceramic dielectric material which comprises heating the capacitor to a uniform temperature between 100° C. and 300° C., and applying to said heated capacitor, for a period of one to ten seconds, an electric current having a voltage between 1.6 and 5.0 times the voltage which said capacitor is designed to carry and measuring the voltage across the capacitor during said period to detect electric breakdown of the dielectric material.

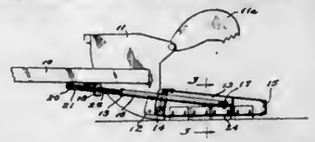
2,474,416
BOTTLE SUPPORT
Jesse E. Du Bois, New York, N. Y.
Application December 24, 1947, Serial No. 793,597
2 Claims. (Cl. 248—105)



1. A holder for a nursing bottle comprising a frame having a U-shaped upper portion integral with a pair of downwardly extending members and a U-shaped base member integral with the downwardly extending members, and a fabric cover comprising a pair of sheets secured together

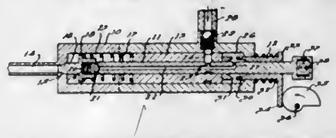
along the periphery sufficiently to retain it in position on the frame, said cover being loose on

the upper U-shaped portion to permit it to sag, said cover further enveloping the entire frame.



2,474,417
HEATING APPARATUS FOR BURNING A LIQUID FUEL SPRAY
George A. Gillen, Bronx, N. Y.
Application December 12, 1944, Serial No. 567,888
1 Claim. (Cl. 158—4)

Heating apparatus comprising an elongated, substantially horizontally extending, substantially cylindrical combustion chamber having an outlet at one end, an air supply tube entered through said outlet end of said combustion chamber and extending to near the opposite end of the combustion chamber, said air supply tube spaced from the surrounding walls of the combustion chamber and providing therewith an annular combustion space substantially the full length of the combustion chamber, a flow reversing baffle at the last mentioned end of the combustion chamber opposite the discharge end of the air tube and arranged to reverse flow from said air tube and direct the same back into the annular combustion space surrounding said tube, a fuel injector at the center of said baffle and directed toward the discharge end of said air supply tube and means connected with the outer end of said tube for forcing a supply of air through said tube to said flow reversing baffle and fuel injector at the far end of the same and whereby injected fuel will be combined with preheated air issuing from the air supply tube and the combination be caused to burn as a combustible mixture in the annular combustion space about the air tube, imparting heat interiorly to the air supplied through the air tube.

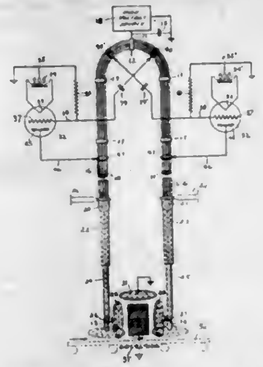


2,474,418
SHOVEL ATTACHMENT FOR SELF-LOADING TRUCKS
Michael Graves and Anatoly Lankovski, Los Angeles, Calif., assignors to Matthew B. Butler, Chicago, Ill.
Application October 29, 1946, Serial No. 706,342
2 Claims. (Cl. 214—78)

1. A scoop for a self-loading truck or the like having at one side thereof means extending outwardly and forwardly thereof adapted to direct material into the entrance of the scoop as the scoop is moved upwardly over the ground, said means being pivotally secured to the scoop for swinging movement relatively thereto, a bar

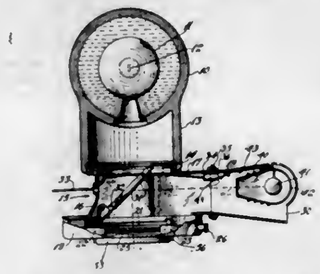
pivotally secured to said means and extending rearwardly therefrom and spring means effective on the bar serving to urge said means into a predetermined position with relation to the scoop by permitting it to be swung in either direction from said position.

2,474,419
FUEL INJECTION APPARATUS
Jesse R. Hale, Berkley, Mich.
Application February 2, 1945, Serial No. 575,893
15 Claims. (Cl. 103—41)



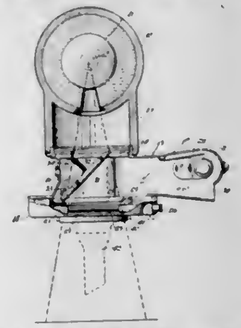
1. In a fuel injector having a housing provided with a charging port and an ejection port; a plunger in the housing dividing the interior thereof into a pair of chambers communicating respectively with said ports; a passage interconnecting said chambers; a valve for controlling said passage and ejection port; and a spring operably connecting said plunger and valve; said spring and valve being so arranged that opening of said passage and closing of said valve is simultaneously effected.

2,474,420
HIGH-FREQUENCY DIELECTRIC HEATING APPARATUS
Loran B. Himmel, West Des Moines, Iowa, assignor, by mesne assignments, to Ross M. Carrell
Application July 16, 1945, Serial No. 605,394
11 Claims. (Cl. 219—47)



1. A dielectric heating system comprising a generally U-shaped conducting structure with work electrodes at the free ends of said structure, said electrodes forming a condenser whose dielectric includes a load, said load and conducting structure operating as a quarter-wave transmission line type tank circuit having a nodal point about mid-way along the structure, at least one vacuum tube having at least a cathode, control grid and anode, a resistor between the grid and cathode, a connection for radio frequencies between the anode and said tank, a connection for radio frequencies between the grid and said tank, said grid and anode connections having negligible length along said tank and being oppositely phased, a radio frequency connection between the cathode and nodal point and a source of high potential between said cathode and anode, said tank being otherwise free of discrete high frequency inductors or capacitors to minimize the formation of parasitic

circuits and, within the power limits of the system, the condenser containing the load be-



ing the dominant influence in the amount of power dissipated in the dielectric.

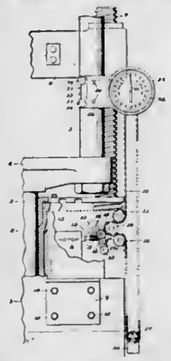
2,474,421
X-RAY EQUIPMENT
Oswald Conrad Hollstein, Secaucus, N. J., assignor to F-R Machine Works, Long Island City, N. Y., a firm
Application February 19, 1948, Serial No. 9,519
3 Claims. (Cl. 250—105)

1. In an X-ray apparatus, a housing open at the bottom and at one side and adapted to be coupled with a source of X-rays and normally to be located below said source, a demountable head coupled to said housing at the open side thereof, a source of light located in said head, a light reflector located in said housing, said reflector disposed in the path of a beam of X-rays from said source of X-rays and in the path of a beam of light from said source of light, said beams being angularly disposed with respect to each other and intersecting each other at said reflector, the central ray of said X-ray beam being at an angle of 45° to said reflector, means coupled with said housing and located below said reflector for controlling the size of said X-ray beam emitted therethrough and of the reflected light beam emitted downwardly through said housing and whose incident light beam emanates from said source of light, a window through which an observer may view in said reflector an image of a surface outside of said means and illuminated by said reflected light beam, said viewing window being in the outer end of said head, the effective reflecting surface of said reflector facing said means and said window.

2,474,422
X-RAY EQUIPMENT
Oswald C. Hollstein, Secaucus, N. J., assignor to F-R Machine Works, a firm
Application November 20, 1947, Serial No. 787,224
10 Claims. (Cl. 250—105)

1. In an X-ray apparatus, a housing adapted to be coupled with a source of X-rays and normally to be located below said source, a substantially point source of light located in said housing, a light reflector located in said housing, said reflector disposed in the path of a beam of X-rays from said source of X-rays and in the path of a beam of light from said source of the light, the central rays of said beams being at right angles to each other and intersecting each other at said reflector, said source of X-rays and said source of light being equidistant from said point of intersection, said central light ray being at an angle of 45° to said reflector at said point of intersection, means coupled with said housing and located below said reflector for controlling the size of said X-ray beam emitted therethrough and of the reflected light beam emitted downwardly through said housing and whose incident light beam emanates from said source of light, a window through which an observer may view in said reflector an image of a surface outside of said means and illuminated by said reflected light beam, said viewing window being in said housing, the effective reflecting surface of said reflector facing said means and said window.

2,474,423
STAGE LIFT PUMP
Walter G. Hurley, Gladewater, Tex., assignor of one-third to Horace Hamilton, Wharton, Tex.
Application May 17, 1945, Serial No. 594,203
3 Claims. (Cl. 103—248)



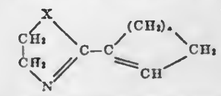
1. A stage lift apparatus for a well including a fluid displacement unit comprised of an elongated housing having a pressure inlet port adjacent its top and into which fluid rises from said well, a fluid pipe entering said housing at its top and depending to a point therein adjacent its bottom, a valve in the lower end of said pipe, a two-way rotary valve in control of said pressure inlet port, a float chamber in said housing capable of limited longitudinal movement therein, a float stop in the upper end of said chamber, a float in said chamber, a pressure exhaust pipe extending through said housing and having communication with

said inlet port, a pair of relatively pivoted arms connecting the top of said chamber with said inlet valve for opening the same to pressure entering said inlet port when fluid rising in said hous-

ing elevates said float against said float stop to evacuate said fluid through said fluid pipe, and spring means in control of said arms to render them effective upon recession of said float and chamber to open said valve to said exhaust pipe.

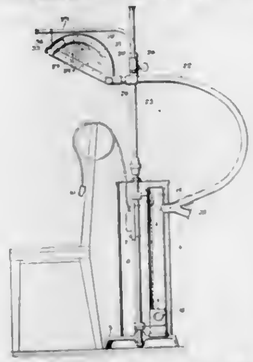
2,474,424
RATE OF MOVEMENT CONTROL APPARATUS
Lawrence K. Hyde, Washington, D. C., assignor to The Baldwin Locomotive Works, a corporation of Pennsylvania
Application July 17, 1946, Serial No. 684,392
5 Claims. (Cl. 235—103.5)

1. A rate of motion apparatus for a movable member, comprising an indicating mechanism including a rotatable element and an indicator responsive to rotary movement thereof, a flexible endless power transmission element connected to said rotatable element, power mechanism adapted to drive said flexible element at a predetermined rate of speed, means for supporting one of said mechanisms by said movable member, and means for supporting the other of said mechanisms in a relatively fixed position, whereby said rotatable element is controlled in a predetermined manner by said transmission element upon occurrence of a differential rate of movement between said flexible element and the movable member.



2,474,425
CUTLERY CONSTRUCTION
Joseph G. Jackson, Chicago, Ill., assignor to Ekco Products Company, Chicago, Ill., a corporation of Illinois
Application July 25, 1945, Serial No. 606,952
4 Claims. (Cl. 30—344)

1. In an article of cutlery, a handle having one end thereof split longitudinally by a slot terminating short of the other end and exposed at opposite longitudinal sides of the handle, a ferrule covering the outermost portion of the split end of said handle and a portion of the slot exposed at opposite longitudinal sides of the handle adjacent said outermost portion, a blade having a tang passed through said ferrule and positioned in said slot with its edges spaced short of the rearward limits of the slot and the longitudinal side surfaces of the handle defining exposed portions of the slot, a U-shaped metal insert positioned in said slot in abutment with the rearward limits of the slot and covered at the forward limits of said slots by said ferrule and so constructed and arranged between said ferrule and said rear limits of the slot as to present an external edge surface flush with said side surfaces of the handle defining exposed portions of the slot and internal edges with which said edges of the tang have peripheral mating engagement, and means piercing the tang and portions of the handle on opposite sides of the tang in rearwardly spaced relation to said ferrule operative to maintain the tang and handle in rigid assembly.



2,474,426
CYANINE DYESTUFFS AND DYESTUFF INTERMEDIATES
John David Kendall, Harold Gordon Suggate, and Henry Walter Wood, Ilford, England, assignors to Ilford Limited, Ilford, Essex, England, a company of Great Britain
No Drawing. Application August 20, 1942, Serial No. 455,442. In Great Britain December 10, 1941
6 Claims. (Cl. 260—240)

1. A process for the manufacture of dyestuffs which comprises condensing a compound selected from the class consisting of the alkyl and aralkyl quaternary salts of a compound of the general formula:

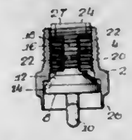
where X is selected from the class consisting of oxygen, sulphur and selenium and n is more than 1 and not greater than 3, with a compound selected from the class consisting of the alkyl and aralkyl salts of a heterocyclic nitrogen compound of the type commonly used in the manufacture of cyanine dyes containing in one of the α and γ positions to the quaternary heterocyclic nitrogen atom, a reactive group selected from the class consisting of thioether, selenoether, and aminovinyl groups.

2,474,427
HAIR DRIER
Ernest Kaiser Kending, Flushing, N. Y.
Application October 23, 1945, Serial No. 623,985
4 Claims. (Cl. 34—99)

1. A portable pressure warm air hair drier, including, in combination, a standard, a longitudinal electric air heater disposed substantially parallel to the lower portion of said standard and connected to it for support, a cold pressure air intake means at the lower portion of said heater and a warm air outlet means connected with the upper portion of said heater, a slide means vertically movably connected with the upper portion of said standard, an air conduit connected with said outlet means and extending through said slide means, a support member connected with said slide means, and a drier cap depending from said support member and comprising a warm air discharge means connected with said air conduit.

2,474,428
PATTERN MARKING LETTER
Ernest T. Kindt, Lakewood, Ohio
Application February 12, 1945, Serial No. 577,487
4 Claims. (Cl. 22—158)

4. An assembly of pattern letters comprising a plurality of rectangular plates of uniform height with letters formed on the upper face of said plates, the face of the plates being undercut at the lateral edges thereof so that the upper face extends beyond the lower face, the pattern letters being disposed in juxtaposition to form a composite symbol.



2,474,429
SELF-LOCKING GARMENT HANGER
Sylvester Kreitmayr, Brooklyn, N. Y.
Application April 7, 1945, Serial No. 587,045
2 Claims. (Cl. 24—232)

1. A locking device for a garment hanger provided with a shank connected to a yoke and terminating above in an arcuate suspension hook, said locking device including a U-shaped channel member having opposed edge portions mutually deflected toward each other to produce a resilient clutching action on the shank when caused to clasp said shank, and a lateral U-shaped arm rigidly extending from the upper portion of said channel member at an angle thereto, the U-shaped arm having openings spaced apart for receiving the arcuate hook therethrough to confine portions thereof within the

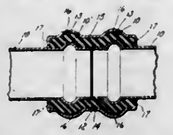
same and expose an intermediate arched portion of the hook above said U-shaped arm when the opposed edge portions of the channel member clasp said shank.

2,474,430
VALVE
Charles E. Laue, Chicago, Ill.
Application June 23, 1945, Serial No. 601,238
1 Claim. (Cl. 137—34)

A drain valve comprising a member with a drain opening having threads therein and a seat at the outer end of said opening, and a plug having a head engageable with the seat to close said opening, said plug having a threaded shank, the threads of said shank being adapted to engage those of said opening and being interrupted to define spaced portions threaded on their remote surfaces and constituting the major longitudinal segment of said shank, said shank including a cylindrical guide portion connected to the end of said first-mentioned portions remote from said head and adapted to prevent mismating of the threads on said first-mentioned portions with those of said opening, said first-mentioned portions defining a pair of flow passages in said opening, and said cylindrical portion having an axial flow passage extending therethrough and communicating with the space between the first-mentioned portions, said axial passage communicating with both passages of said pair.

2,474,431
CLAMP
Maurice S. Lipman, Hempstead, and Wilmot W. Godon, Freeport, N. Y., assignors to Republic Aviation Corporation, near Farmingdale, N. Y., a corporation of Delaware
Application May 3, 1946, Serial No. 666,965
2 Claims. (Cl. 285—129)

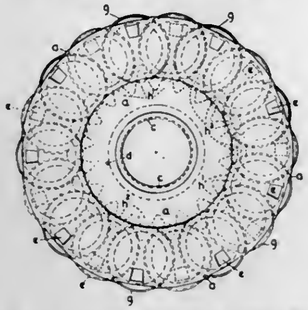
1. The combination with a relatively thick sleeve of elastic material for the reception of the adjacent end portions of tube sections, each tube



section having a projecting portion to be embedded in the inner surface of said sleeve, of a pair of arcuate clamping members hingedly connected one to the other at corresponding ends and having inwardly extending flanges at their

a tubular member disposed between the plates, a nut secured to one of the plates, a bolt extending through the tubular member and having threaded engagement with the nut, said bolt movable from the nut for releasing one of the plates to permit

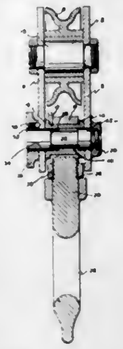
2,474,435
VACUUM TUBE AMPLIFIER
Robert C. Moore, Philadelphia, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania



ing members and said outer element to dispose said outer element below said supporting members, said outer element having a plurality of hanger pins spaced therealong, and an inner longitudinal element swingably mounted on said supporting members intermediate their ends, said inner longitudinal element having a plurality of

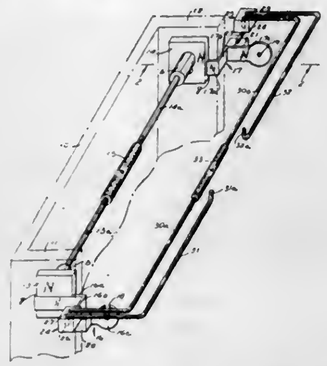
section having a projecting portion to be embedded in the inner surface of said sleeve, of a pair of arcuate clamping members hingedly connected one to the other at corresponding ends and having inwardly extending flanges at their edges, the flanges of each clamping member being spaced a distance at least equal to the length of the sleeve and having a width less than the thickness of the sleeve, said flanges being situated

over the ends of the sleeve as to restrict the latter longitudinally when the clamping members operatively engage the sleeve, means carried by each clamping member for the reception and housing of the deformation of the sleeve caused by the projections on the tubes under pressure of said clamping members, and means for adjustably securing the unhinged ends of said clamping members one to the other.



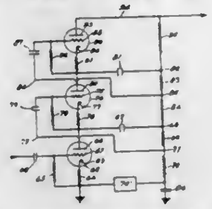
2,474,432
HAND OPERABLE INDICATING APPLIANCE
Cuthbert John Joseph Lowe, Cheltenham, England
Application August 4, 1947, Serial No. 766,056
In Great Britain October 24, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires October 24, 1964
2 Claims. (Cl. 235—114)

1. A hand indicating appliance, comprising two or a pair of cover plates secured together, and around each of which spaced sighting apertures are formed; disc-locating means comprising circular recesses formed in adjacent faces of said cover plates; and indicator discs bearing appropriately arranged markings revolubly positioned in said recesses, but in part projecting from the peripheries of the cover plates; and said disc-locating recesses being so arranged that the discs in part overlap one another, for the purpose specified.



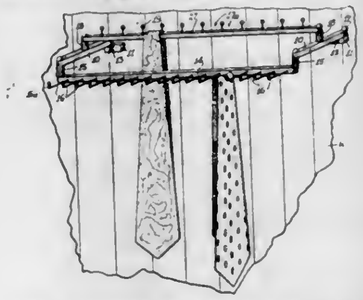
2,474,433
SNATCH BLOCK
William H. McKissick, Tulsa, Okla.
Application April 12, 1948, Serial No. 20,487
6 Claims. (Cl. 254—193)

1. In a snatch block having opposite side plates, a rotatable pulley journaled between the plates, a tubular member disposed between the plates, a nut secured to one of the plates, a bolt extending through the tubular member and having threaded engagement with the nut, said bolt movable from the nut for releasing one of the plates to permit



rotary displacement thereof, a reduced shank portion on the bolt providing spaced shoulders, a split resilient ring encircling the reduced portion, said ring providing frictional engagement between the bolt and the tubular member for maintaining the bolt thereon in released position.

2,474,434
COMBINED SUPPORT FOR SHADES, CURTAINS, AND DRAPES
Frank E. Mentz, Wallkill, N. Y.
Application October 22, 1946, Serial No. 704,857
5 Claims. (Cl. 160—112)

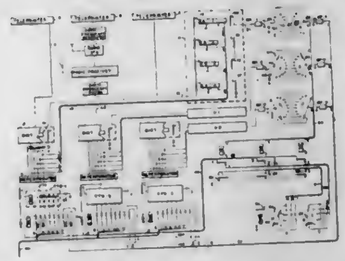


3. A combination bracket for supporting a shade roller, a curtain-rod, and over-drapery cranes, comprising a variable length cross member, brackets projecting forwardly from said member, arms projecting outwardly at right angles from said brackets respectively, and each having an end bent upwardly at right angles, rod hangers supported at the top of said ends respectively, and a variable length curtain rod demountably supported between said hangers.

2,474,435
VACUUM TUBE AMPLIFIER
Robert C. Moore, Philadelphia, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application January 8, 1945, Serial No. 571,935
5 Claims. (Cl. 179—171)

2. In an amplifying system, a plurality of vacuum tubes, each tube having cathode, control grid and anode, means for connecting said tubes in series with the anode of each tube in the series connected to the cathode of the next tube in the series, a bias resistance between the anode of one tube and the cathode of the next tube in the series, an input circuit to the control grid of said first tube in the series, a load having one terminal connected to the anode of the last tube in the series, a source of potential connected between the other terminal of the load and the cathode of the first tube in the series, connections from said load to the control grids of the tubes above the first tube in the series, each such connection including a blocking condenser and being made to a point on the load where the amplitude of voltage variation is such as to provide signals on the control grids substantially equal in amplitude to the signals on the grid of the first tube, and an output circuit across said load.

2,474,436
COLLAPSIBLE TIE RACK
Philip Pestyner, Jamaica, N. Y., assignor to Ty-Master Corporation, New York, N. Y.
Application September 3, 1947, Serial No. 771,839
3 Claims. (Cl. 211—104)



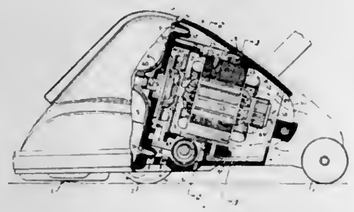
2. A collapsible tie rack for attachment to a supporting surface, said tie rack comprising a pair of spaced supporting members, a mounting lug pivotally secured to each of said supporting members at the inner end thereof, an outer longitudinal element swingably mounted on said supporting members at the outer ends thereof, spacer members interposed between said supporting members and said outer element to dispose said outer element below said supporting members, said outer element having a plurality of hanger pins spaced therealong, and an inner longitudinal element swingably mounted on said supporting members intermediate their ends, said inner longitudinal element having a plurality of spacing pins secured along the upper surface thereof, all constructed and arranged so that said pair of supporting members and said inner and outer longitudinal elements may be swung inwardly toward said supporting surface.

2,474,437
INTERNAL-COMBUSTION ENGINE CONDITIONING COMPOUNDS
Raymond I. Potter, Lorain, and Harry Gillett, Hudson, Ohio, assignors to The Standard Oil Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application September 25, 1946, Serial No. 699,350
6 Claims. (Cl. 252—170)

1. An internal combustion engine conditioning compound, consisting of glycolmonobutyl ether 10–50 per cent, and absorbent oil boiling between about 450 and 750° F. and having an A. P. I. gravity of 30–35° and viscosity about 50 SUS at 100° F.

2,474,438
COMMUNICATION AND POSTING SYSTEM
Edwin L. Schmidt, Kew Gardens, N. Y., assignor to The Teleregister Corporation, New York, N. Y., a corporation of Delaware
Application February 6, 1945, Serial No. 576,398
19 Claims. (Cl. 177—353)

18. A system for posting information regarding the movements of aircraft, comprising an announcing board having a plurality of groups of electro-responsive indicators assignable at different times to different flights respectively of said aircraft, each group having at least one indicator actuatable to different settings for displaying a flight designation and other indicators respectively actuatable to different settings for displaying a plurality of different kinds of data in regard to the flight, means for selectively setting any of said flight designation display indicators to designate a given flight, a source of message posting signals transmitted in succession and comprising a flight designation and data to be posted relating to the flight, means including a group of storage devices responsive to said flight designation signals for automatically finding and seizing a particular group of indicators having a flight designation setting corresponding to the flight designation signals and operative when no group has such flight designation for finding and seizing an



available idle group of indicators, other groups of signal storage devices for storing said data in the message, means for applying the incoming data signals to said other signal storage devices, an alarm means, means controlled by the stored signals for actuating the indicators of the seized group for displaying said data and also the flight designation when an idle group of indicators has been seized and means automatically effective for operating said alarm means to attract attention to such occurrence.

2,474,439

ELECTRIC MOTOR

Louis E. Segesman, Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio

Application September 3, 1947, Serial No. 771,831
10 Claims. (Cl. 172—36)

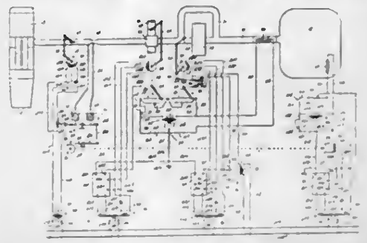
1. In a motor construction, a housing element constructed of non-conducting material and having a portion adjacent one end thereof formed to support a motor bearing structure, a bearing structure in said support, a removable wall of non-conducting material for closing the end of said housing remote from said one end, a motor bearing structure mounted on said removable wall, a motor field stack assembly, a metallic member having a cylindrical wall encasing and secured to a portion of the peripheral wall of said field stack assembly, means securing said metallic member to said housing element, a cylindrical flange on said removable wall member engaging said metallic member, and a motor rotor assembly supported within said field stack assembly by said bearings.

2,474,440

PROCESS FOR THE PRODUCTION OF A LITHIUM-ALUMINUM COMPOUND AS A BASE FOR A CONVERSION CATALYST

Albert E. Smith and Otto A. Beeck, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Application March 3, 1947, Serial No. 732,129
15 Claims. (Cl. 260—683.3)



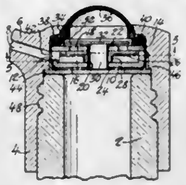
14. In a process for effecting dehydrogenation by contacting the material to be dehydrogenated under conversion conditions with a solid dehydrogenation catalyst, the improvement which comprises contacting said material to be dehydrogenated with said catalyst while the latter is disposed on the extended surface of an adsorptive lithium-aluminum compound of the formula $Li_2O \cdot 5Al_2O_3$, said lithium-aluminum compound surface being at least 30 $m.^2/g.$ and substantially free of water soluble lithium.

2,474,441

TEMPERATURE CONTROL APPARATUS FOR CABINS OF AIRCRAFT

Hubert T. Sparrow, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware

Application June 6, 1946, Serial No. 674,748
17 Claims. (Cl. 62—6)



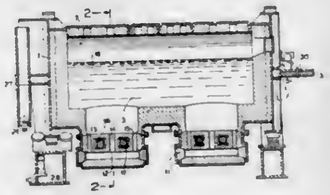
1. In an aircraft having a cabin, means for compressing air for said cabin, conduit means for conducting said air to said cabin, means responsive to the rate of air flow through said conduit means, valve means for controlling said air flow, said valve means being controlled by said rate of flow responsive means, said conduit means including aftercooler means, means for passing cooling air thorugh aftercooler means, means for controlling the said flow of cooling air, said conduit means also including refrigerating means downstream of said aftercooler means and bypass means around said refrigerating means, diverting means for controlling air flow through said refrigerating means and said bypass means, means responsive to the temperature of the air discharged from said conduit means into said cabin for controlling said cooling air controlling means and said diverting means in a sequence to lower the discharge air temperature wherein the aftercooler is first used for a portion of its capacity, the refrigerating means is next used with the aftercooler, followed by use of the refrigerating means alone and then by the refrigerating means and the aftercooler together, and means responsive to the cabin temperature for adjusting said rate of flow responsive means and said discharge air temperature responsive means.

2,474,442

LIQUID DISPENSING DEVICE WITH BULB PUMP

Donald L. Spender, Wolcott, and Gray L. Butler, Waterbury, Conn., assignors to Scovill Manufacturing Company, Waterbury, Conn., a corporation of Connecticut

Application May 8, 1945, Serial No. 592,682
10 Claims. (Cl. 222—207)



1. A liquid dispensing device adapted to be applied to a container and movable therewith to inverted and upright positions, said device comprising means having a discharge opening, means for conducting liquid from said container to said opening, valve means controlling flow of liquid from said container to said opening, a second valve means controlling flow of liquid from said container to said opening, and a compressible bulb having a cavity therein communicating with said valve means, said valve means being movable by gravity to alternative positions in each of which one of said valve means is closed and the other of said valve means is open, both of said valve means being movable in response to compression of said bulb when the container and dispensing device are in an inverted position to cause liquid to be discharged from said discharge opening, compression of said bulb when the container and dispensing device are in an upright position serving to urge said valve means to positions in which they prevent the discharge of liquid from said discharge opening.

2,474,443

DRUM TYPE INDUCTION FURNACE

Mario Tama, Morrisville, Pa., and James Lloyd Hoff, Pennington, N. J., assignors to Ajax Engineering Corporation, Trenton, N. J.

Application November 29, 1947, Serial No. 788,912
16 Claims. (Cl. 13—29)

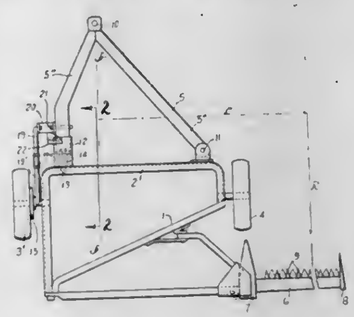
1. In a drum-type induction furnace for molten metals a base, a metal holding chamber, a refractory lined casing housing said chamber, inductor units attached to the circumference of said casing below its horizontal center plane, a secondary melting loop in said inductor units connected with said molten metal holding chamber, the melting loop of one of said inductor units extending through a vertical center plane of the furnace and the melting loops of the other lateral inductor units extending through a plane forming an acute angle with said vertical center plane, means to rotatably support the furnace and to rotate the same into its operating positions.

2,474,444

PREPARATION OF ORGANOSILICON COMPOUNDS

Ambrose George Taylor, Birmingham, England, assignor to The Dow Corning Corporation, Midland, Mich.

No Drawing. Application July 25, 1947, Serial No. 763,753. In Great Britain February 12, 1946
Section 1, Public Law 690, August 8, 1946
Patent expires February 12, 1966
8 Claims. (Cl. 260—448.8)



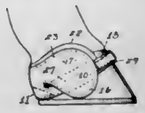
1. The method of preparing alkyl-substituted silicon compounds which comprises reacting molten metallic sodium with a tetraalkylorthosilicate and a dialkyl sulfate in liquid phase, whereby an alkyl radical from said sulfate is substituted for at least one alkoxy radical of said silicate.

2,474,445

SIDE DRAFT STABILIZER MECHANISM

Wilhelm Vutz, Coldwater, Ohio, assignor, by mesne assignments, to Avco Manufacturing Corporation, a corporation of Delaware

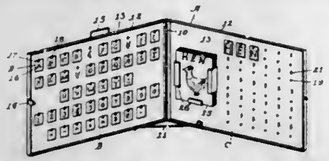
Application June 12, 1944, Serial No. 539,897
8 Claims. (Cl. 56—321)



2. An agricultural mower or the like of the type wherein a wheeled chassis carries a laterally extending outrigger type cutter bar against which is exerted an unbalanced resistance to travel motion of the machine by which the chassis may be deflected from a straight path of travel, characterized by a sidedraft stabilizer, including a draft member for connection with a propelling unit, a yielding coupling connecting the chassis thereto for lateral shifting movement under influence of such unbalanced resistance to travel motion, a brake mechanism for one wheel of the chassis and actuating means therefor operated by the movement of the chassis under influence of such unbalanced resistance.

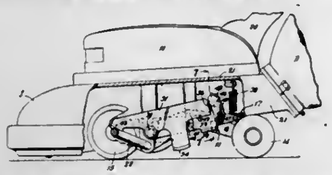
2,474,446

QUARTER BOOT FOR HORSES



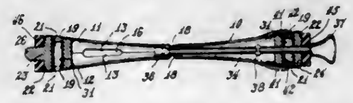
Arthur E. Warren, Des Moines, Iowa

Application November 14, 1947, Serial No. 785,905
5 Claims. (Cl. 54—82)



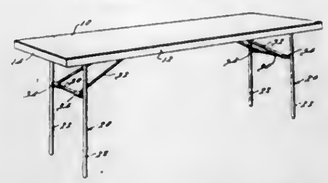
3. A quarter boot, comprising a central body portion adapted to form a guard for the rear of the foot, circular wing portions projecting from the upper end of said body to encircle the sides of the foot, strap like portions projecting laterally from the lower end of said body, a liner covering the inner surface of said portions, that portion of the liner covering said wing portions including loops; said strap portions being threaded through the loops to give the boot the proper shape to fit the foot, and to draw and hold the wing portions firmly to the foot, the inner side of the lower end of said body having a reinforcing strip including a centering lug, a strap and buckle secured to one of said strap like portions and a ring secured to the end of the other one of said strap like portions.

2,474,447
CHILD'S EDUCATIONAL TOY
Raymond Wheelock, Los Angeles, Calif., assignor to Jack R. Stanley and Michael E. Rose, both of Los Angeles, Calif.
Application June 23, 1947, Serial No. 756,397
1 Claim. (Cl. 35—73)



An educational toy, comprising a pair of panels each having a display inner face and a group of supporting hooks arranged in spaced relation on each of said display surfaces, a nubble projecting outwardly on each display surface below each supporting hook, alphabetical display tags removably hung in separated order by the supporting hooks and sustained in outstanding position on a display face of each of said panels, and a group of study cards displaying a group of characters to be selected and removed from one of said panels and assembled in word or character formation in outstanding position on the hangers of the companion panel by said nubbles.

2,474,448
SEMIAUTOMATIC NOZZLE ADJUSTMENT FOR SUCTION CLEANERS
Harry B. White, Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio
Application May 5, 1943, Serial No. 485,688
18 Claims. (Cl. 15—358)



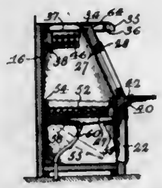
8. In a suction cleaner, a body including a nozzle having lips, a wheel, operator-operable nozzle adjusting means operable to adjust said nozzle to a predetermined height above a surface to be cleaned including mounting means movably mounting said wheel on said body, means to position said wheel relative to said body comprising a feeler-lever operatively mounted on the body and arranged to contact and control the position of said mounting means upon release of an operator-applied force on the nozzle-adjusting means and including a surface-contacting portion adapted to rest substantially on the top of an underlying surface, cooperating clutch means operatively mounted on the cleaner with respect to the feeler-lever to engage said feeler-lever in its position at rest upon an underlying surface, means to disengage said clutch means upon the application of an outside force to said nozzle adjusting means to enable said lever to drop onto a supporting surface free from the weight of said body, and means arranged to effect re-engagement of said clutch means selectively under the control of the surface-contacting portion upon release of the operator-applied force from the nozzle adjusting means and to move said lever to a position as determined by its position when re-engaged by said clutch means, the position of said lever determining the position of said nozzle.

2,474,449
EXPANDIBLE CURLING ROD
John Whyte, Chicago, Ill., assignor, by mesne assignments, to Helene Curtis Industries, Inc., a corporation of Illinois
Application April 23, 1946, Serial No. 664,314
4 Claims. (Cl. 132—33)

1. A curling rod comprising in combination a pair of segments shaped to form a tubular body, an end member retained within each end of said body, each of said end members having diametrically opposed longitudinal slots, inwardly turned portions on said segments loosely engageable in said slots to retain said segments in assembled relation but to permit limited movement towards and away from each other, and an operating stem slidable in said body and arranged to cooperate with the inner surfaces of said body to urge said segments away from each other to expand said body circumferentially.

2,474,450
FOLDING TABLE WITH PAIRED LEGS
Francis J. Woodruff, Detroit, Mich.
Application April 28, 1948, Serial No. 23,671
5 Claims. (Cl. 311—88)

1. A foldable table comprising a table top, foldable leg assemblies at opposite ends of said top and means for holding said leg assemblies in either extended or folded position including a bar secured to the undersurface of said top at substantially the middle thereof, said bar having a separate bearing surface for each of said leg assemblies and a notch at the outer end of each bearing surface, a separate latch element pivoted to each of said leg assemblies and slidable on respective bearing surfaces when said leg assemblies are moved between folded and extended positions, said latch elements entering said notches when the leg assemblies are fully extended to hold said assemblies in extended positions, and a leaf spring having an upwardly arched middle portion fastened to the bar between said bearing surfaces and having oppositely extending arm portions, said arched middle portion holding the inner ends of said arm portions spaced away from said bearing surfaces so as to accommodate the latch elements between said arms and said bearing surfaces at the inner



ends of the latter and to position said arms so that they gradually approach said bearing surfaces toward the outer ends thereof and bear against such surfaces at the junctures thereof with said notches, said arm portions overlying said bearing surfaces and having freely movable terminal portions projecting across said notches, said arm portions being spaced below the inner ends of said surfaces so as to accommodate the latch elements therebetween and bearing against the outer ends of said surfaces so as to hold the latch elements in said notches.

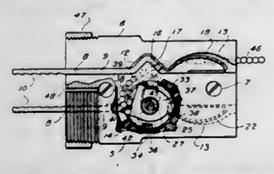
2,474,451
CULINARY UTENSIL
William C. P. Zabel and Richard C. Helfenbein, Chicago, Ill., assignors to Plasmetl Corporation, Chicago, Ill., a corporation of Illinois
Application December 7, 1945, Serial No. 633,455
3 Claims. (Cl. 30—307)

1. A culinary utensil comprising a handle, a pair of cutting wheels adapted to be positioned in spaced alignment with respect to each other, means for supporting one of said wheels in fixed position with respect to said handle, means for supporting the other of said wheels from said handle for movement from aligned position with respect to said one wheel, said last-named means comprising an arm supporting said other of said wheels, a groove and loop connection between the arm and the handle, the groove permitting the arm to be moved longitudinally of the handle and the loop being adapted to be engaged by a thumb to facilitate moving the arm longitudinally of said handle.

2,474,452
REFRIGERATOR
Adelard Amyot, Montreal, Quebec, Canada
Application February 14, 1946, Serial No. 647,483
3 Claims. (Cl. 62—89.5)

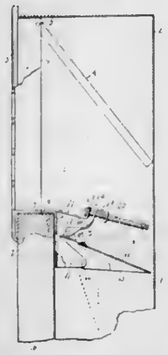
1. A refrigerator comprising a case having a cooling coil disposed intermediate the top and bottom, a partition immediately above the cooling coil dividing the interior of the case to form upper and lower compartments, a drip pan normally supported immediately below the coil and conveniently inclinable to a downward position for convenient cleaning thereof, an open mesh partition disposed above the first mentioned partition, hinged shelf sections mounted at the front of the case movable to upward out-of-the way positions and downward horizontal supporting positions, an inclined upper front wall frame, a glass plate supported longitudinally across the said frame in the upper half thereof, the hinged shelf sections being adapted to close the space below the glass plate when moved upwardly.

2,474,453
HYDRAULIC FISHING TOOL
James A. Armitage, Houston, Tex.
Application August 2, 1948, Serial No. 42,017
8 Claims. (Cl. 294—102)



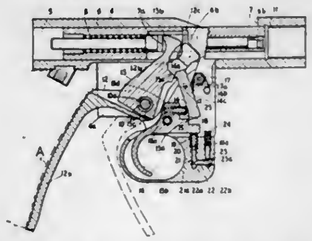
8. A fishing tool comprising, a tubular operating string of pipe including a mandrel, means on the lower end of the mandrel for engaging an object stuck in a well, a cylinder through which the mandrel works and forming a closed chamber about the mandrel, a piston on the mandrel and fitted in the cylinder, means for controlling the application of fluid pressure from the string into the cylinder on opposite sides of the piston, alternately, slips on the cylinder engageable, when in active position, with the walls of the well and adapted to allow only upward movement of the cylinder, means initially retaining said wall engaging means in inactive position to allow the tool to be lowered into the well, said retaining means being releasable upon initial application of said fluid pressure to allow said engaging means to move to active position, said cylinder having fluid passageways at its ends, valves arranged to control the cylinder passageways and means for reversing the position of said valves when the piston reaches the limit of its movement in either direction.

2,474,454
ELECTRICAL PLUG
Ralph L. Avery, Oakland, Calif.
Application February 1, 1947, Serial No. 725,918
2 Claims. (Cl. 173—361)



2. A switch plug comprising a body having a pair of socket engaging prongs extending therefrom, said prongs having gripping teeth formed on the inner faces of said prongs, said teeth being

directed downwardly and toward the central axis of said body so as to facilitate the insertion of the prongs into a socket and to impede the withdrawal of the same therefrom and means for adjusting the distance between said prongs, said means comprising a tapered threaded portion on

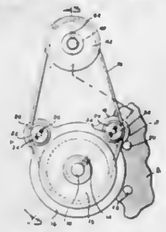


said prong end of the body, an internally threaded ring engaging said portion, said prong end having a longitudinal slot therein spaced between the prongs, said ring being adapted to draw the prongs toward each other when the ring is tightened on the threaded portion.

2,474,455
AIR DUCT CONTROL
Kenneth L. Babcock, Muskegon, Mich., assignor to Air Control Products, Inc., Coopersville, Mich., a corporation of Michigan
Application May 21, 1945, Serial No. 595,010
7 Claims. (Cl. 98—41)

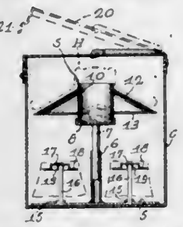
1. The combination with a wall register and a conduit of rectangular section operatively associated therewith, of a plate-like damper hanger provided with rearwardly projecting arms at its ends and having an out-turned flange at its upper edge adapted for attachment to a supporting part at the front of the conduit, a damper having downturned flanges of substantial width at the ends thereof pivotally mounted adjacent their lower edges on said hanger arms, the pivots being substantially spaced from the front edge of the damper, a pivot ear on the upper side of said damper adjacent the front edge thereof, a rearwardly projecting link pivotally mounted at its forward end on said ear and having a loop at its swinging end, an adjusting screw having threaded engagement with the arms of said loop whereby the screw is supported against angular movement relative to the link, and a supporting arm on which said screw is mounted to permit rotation thereof and to prevent angular movement relative to the arm, said arm being fixed at one end to the supporting flange of said hanger, said link being springable whereby the movable parts are subjected to spring stress, the parts being carried by said hanger permitting their assembly within the conduit as a unit.

2,474,456
COCKING MECHANISM FOR BOLT ACTION RIFLES
Joseph Henry Barnett, Birmingham, England, assignor to J. H. Barnett, Son and Company Limited, Birmingham, England, a company of Great Britain
Application March 4, 1947, Serial No. 732,283
In Great Britain March 12, 1946
4 Claims. (Cl. 42—16)



1. In a rifle having a slidable bolt, a firing pin slidably mounted on said bolt and a trigger, a cocking mechanism comprising, in combination, a vertically extending, angularly movable cocking lever pivotally mounted on a horizontal axis below the bolt, said cocking lever having a bifurcated upper end forming laterally spaced parallel arms, the bolt of said rifle having a pair of laterally spaced elongated grooves therein into which the upper ends of said arms extend, a pivotally mounted, angularly movable tumbler-lever extending upwardly substantially parallel to said cocking lever and engageable thereby for movement therewith during retraction of the bolt, the bolt and firing pin each having a slot through which and into which, respectively, the upper end of said tumbler lever extends, a firing spring acting between the bolt and the firing pin and urging the firing pin forwardly toward a cartridge in the breech of the rifle, and an intermediate sear lever pivotally mounted on the rifle and having a sear at its one end which is movable into the path of and slidably engageable with said tumbler lever to hold said tumbler lever and the firing pin in retracted and cocked position when the bolt is moved into closed position, the other end of said intermediate sear lever being engageable with the trigger, whereby pressure of said firing spring against the firing pin is applied to said tumbler lever and opposed by said intermediate sear lever, and firing is effected by pressing the trigger and swinging said intermediate lever out of the path of movement of said tumbler lever.

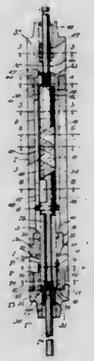
2,474,457
BELT DISENGAGING DEVICE
Robert Menning Barth, Bronxville, N. Y., assignor to The FR Corporation, New York, N. Y., a corporation of New York
Application May 16, 1947, Serial No. 748,585
7 Claims. (Cl. 74—216.5)



1. A device of the character described comprising a support member, a drive shaft and pulley thereon, a disc disposed about the drive shaft and associated with the drive pulley and

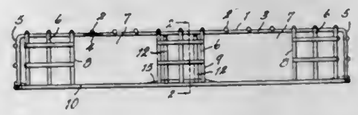
capable of rotating therewith, a driven shaft and pulley therefor on the support in spaced relation to the drive shaft and pulley, the pulleys being in the same plane, idler rollers mounted on the disc and spaced apart thereon a distance greater than the diameter of the drive pulley, the idler rollers being in the same plane as the drive and driven pulleys, an endless belt around and engaging the drive and driven pulleys and idler rollers, rotation of the drive shaft and drive pulley in

one direction rotating the disc and positioning the idler rollers between the drive and driven pulleys, and positively driving the belt to rotate the driven shaft and pulley in the same direction, and means, operable on rotation of the drive shaft and pulley in the opposite direction, to rotate the disc to position the idler rollers thereon on the side of the drive pulley remote from the driven pulley to thereby cause disengagement of the belt from the drive pulley.



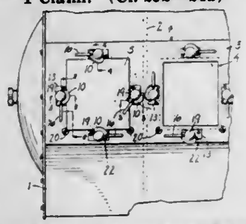
2,474,458
HAT CARRIER
Rose Beaudoin, Westmount, Quebec, Canada
Application December 14, 1946, Serial No. 716,335
In Canada November 18, 1946
5 Claims. (Cl. 206—8)

2. As an article of manufacture, a hat carrier comprising a closable case, at least one post releasably insertable into the bottom of said case so as to project in upright position in the latter, a cup formed on the top of said post, and a hat support carried by said cup composed of a cylindrical body, a conical surface flared outwardly from one end of said body, and a flat annulus extending radially outward from near the other end of said body to meet the periphery of said conical surface; whereby either end of said body is releasably insertable into said cup whilst the other end is usable to support a hat.



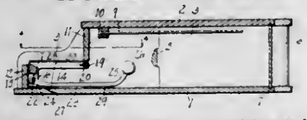
2,474,459
JAR
Julius S. Beck, Los Angeles, Calif.
Application February 19, 1945, Serial No. 578,661
7 Claims. (Cl. 255—27)

1. A jar including a lower jar member and an upper jar member, a hammer on one of said jar members and an anvil on said other jar member, means for connecting said upper jar member to an upper section of a drill pipe, said lower jar member including a coupling member for coupling said lower jar member to the upper end of a lower section of said drill pipe, a mandrel turnably connected at one end to said coupling member, a spring coiled around said mandrel and connected at one end to said coupling member and at its other end to said mandrel for normally holding said mandrel in its initial position against



turning in one direction, said mandrel extending into and slidable axially and turnable in said upper jar member, and interengaging wedges on said mandrel and on said upper jar member, respectively, to cause said mandrel to rotate against the tension of said spring and disengage said interengaging wedges to enable said upper jar member to move upwardly with relation to said lower jar member, under upward tension applied to said upper jar member, to cause said hammer to strike said anvil and produce a jarring action.

2,474,460
PALLET OR SKID FOR LIFTING TRUCKS OR THE LIKE
Dewey H. Bitney, Albion, Mich., assignor to Union Steel Products Company, Albion, Mich., a corporation of Michigan
Application June 9, 1947, Serial No. 753,427
9 Claims. (Cl. 248—120)



5. In a pallet, the combination of a grid-like platform or deck of metal having the edges thereof turned downwardly substantially at right angles to provide integral grid-like leg members, and a bottom frame secured to the lower ends of said leg members, portions of said leg members being removed to provide spaced openings adapted to receive the forks of a lifting truck or the like, adjacent leg members at the corners of the deck being secured together.

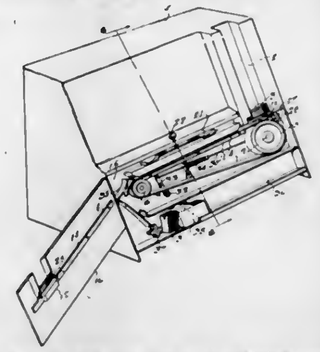
2,474,461
CLOSURE FASTENER FOR TUMBLING BARRELS
Richard E. Bogema, Sturgis, Mich., assignor to The Sturgis Products Company, Sturgis, Mich., a corporation of Michigan
Application May 4, 1945, Serial No. 591,925
1 Claim. (Cl. 292—241)

The combination in a container having an enclosure wall provided with a door opening, of a removable door provided with an inwardly facing gasket adapted to seat against the outer side of the enclosure wall at the edges of the door opening, latch studs mounted on the enclosure wall at the edges of the door opening, camming latch members rotatably mounted on said studs to be swung into clamping engagement with the outer side of the door, said latch members being provided with projecting portions at the front ends of their cam portions which overlie the door and are spaced from the door when it is fully closed and when the latch members are in partially open position, stops on said enclosure wall with which said projecting portions engage when the latch members are fully closed, said stops being adapted to coact with the rear ends of the latches when the latches are in fully open position, and springs on said studs at the outer sides of said latch members acting to urge them yieldingly inward, said latch members being rotatable about said studs in their latching and unlatching movements and slidable longitudinally of said studs under the action of said springs.

2,474,462
MUSICAL INSTRUMENT
John A. Brewer, Kalamazoo, Mich., assignor, by decree of distribution, to Rozelda A. Brewer
Application August 12, 1946, Serial No. 689,965
14 Claims. (Cl. 84—404)

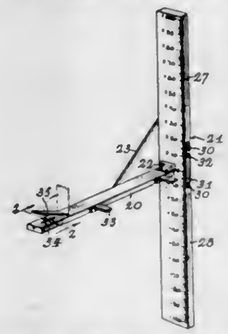
1. A musical instrument comprising a housing including a bottom, sound elements disposed within the housing, a key pivot rod disposed transversely within the housing, keys having rearwardly facing key slots at their rear ends springably engaged with said pivot rod and downwardly projecting arms at their front ends provided with longitudinal slots and transverse key hole slots opening at the lower ends thereof, hammers having angularly disposed arms at their front ends disposed in said longitudinal slots of said keys and provided with pivots springably engaging the key slots thereof, the angled portions of said angularly disposed arms constituting sliding fulcrums for said hammers, and a combined fulcrum and buffer strip secured to the bottom below the front ends of the keys and hammer arms to receive the impact thereof and to swingably support the hammers adjacent their fulcrums.

2,474,463
WIRING PENCIL
Ellis Burrell, Cook County, Ill., assignor to the United States of America as represented by the Secretary of the Navy
Application January 13, 1944, Serial No. 518,198
3 Claims. (Cl. 242—130)



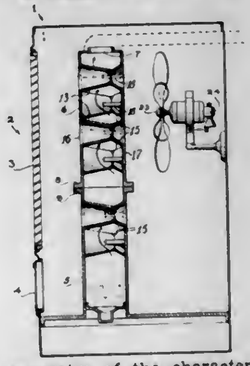
1. A wiring pencil including an open-end barrel having a comparatively long, straight inner bore and a nipple having an axially alined restricted bore, a wire-supporting spool journaled at the rear end of the barrel, and means mounted on the nipple adapted to engage and sever a portion of wire.

2,474,464
PIT PROP AND THE LIKE
Richard George Cable, Oakdale, Blackwood, England
Application April 14, 1948, Serial No. 21,023
In Great Britain April 24, 1947
5 Claims. (Cl. 248—354).



1. A prop which comprises a portion adapted to rest on a load supporting surface, a further portion adapted to bear against a superimposed load, a cylinder connected with one of said portions, a piston connected with the other of said portions, a non-return inlet valve for admitting liquid under pressure to the cylinder whereby the two first-mentioned portions may be forced against the supporting surface and the loads respectively and valve means for permitting liquid to escape from the cylinder when the load on the prop exceeds a predetermined value and thereby cause the height of the prop to be adjusted in dependence on the load on the prop.

2,474,465
DEVICE FOR FILING TYPE MATRICES
Carl A. Carlton, Fort Worth, Tex.
Application July 29, 1944, Serial No. 547,220
2 Claims. (Cl. 29—76)

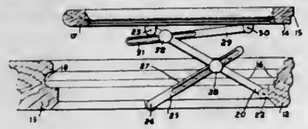


1. A filing machine for type matrices comprising a cabinet having an inclined face, a matrix chute arranged in the said face and a releasing mechanism operatively arranged at the bottom of the said chute for releasing the said matrices singly, a pair of stationary parallel rail members mounted on the cabinet below the chute and spaced to operatively and longitudinally support a matrix only by the projecting ears thereof, a file on each rail member, paired filing members above the rail members yieldably cooperating with the said stationary files engaging the upper sides of the ears of the said matrix and a belt conveyor having a lug thereon for conveying the said matrix along between the said files, a pivoted latch arm adjacent the belt conveyor, a spring tensioned rod connected to the pivoted arm and the releasing mechanism whereby said releasing mechanism is automatically actuated by engagement of said lug with said latch arm.

2,474,466
MEASURING INSTRUMENT
Wilfrid Henry Carling, Westmount, Quebec, Canada
Application December 31, 1947, Serial No. 795,017
1 Claim. (Cl. 33—64)

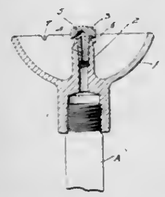
A measuring instrument of the character described, comprising a member having a graduated scale thereon, a sighting arm secured in perpendicular relation to said member at one end of said scale, the length of said arm being in predetermined proportion to the graduations of said scale whereby, when the former is held horizontally, the ratio of height to range of any object sighted may be determined by noting the reading at which the vertical scale is intersected by the lines of sight to limiting points of said object, the said arm being narrower than the graduated member, and at least a pair of aligned projections level with the sighting surface of the arm and projecting outside said arm from intermediate the length of one edge, said projections being adapted for sighting purposes and extending beyond the width of said member.

2,474,467
HEATING APPARATUS
Arthur W. Conley, Shaker Heights, Ohio, assignor to The Heater Corporation, Cleveland, Ohio, a corporation of Ohio
Application March 3, 1945, Serial No. 580,898
8 Claims. (Cl. 257—137)



8. An apparatus of the character described having in combination a housing having a discharge outlet in its upper area, a heating chamber in the lower portion of said housing, a heat exchange chamber in said housing immediately above said heating chamber, said chambers having front and rear walls, a plurality of ducts at spaced intervals throughout at least one of said chambers and extending through the front and rear walls thereof, each of said ducts consisting of a short frusto-conical area at the intake end of said duct and a long frusto-conical area at the discharge end of said duct, a fan operating to move air intermittently through said ducts, an air intake opening formed in the front wall of said housing adjacent the base thereof, an air discharge opening formed in the front wall of said housing in a plane above the intake opening, and means to cause enhanced heating effect in each of said transverse ducts, said means comprising horizontal wings provided on the external surfaces of each of said ducts and arranged to direct the gases of combustion toward the front wall of the adjacent chamber.

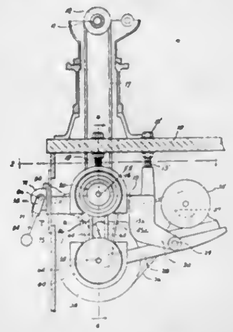
2,474,468
SUPPORTING OF CASEMENTS
James Richard Cornelius, Coventry, England
Application April 2, 1945, Serial No. 586,185
In Great Britain July 22, 1944
6 Claims. (Cl. 20—53)



6. For a window, a stationary frame, a case-

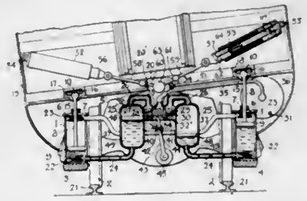
ment frame, two spaced supporting means which are parallel to one another and are hinged at their one ends upon the stationary frame and at their other ends on the inside face of the casement frame to support the latter, two releasable clamping means inside the window carried in spaced relationship by one of said supporting means, a link hinged on the stationary frame inside the window and slotted to coact with one of said clamping

means, and a link hinged on the casement frame inside the window and slotted to coact with the other of said clamping means; the edge of said casement frame which is nearer to the said other ends of said supporting means than to the said one ends thereof, when said casement frame is in the closed position, being convex in cross-section, and the coacting edge of said stationary frame being correspondingly concave to receive said convex edge and provide therewith a good seal.



2,474,469
POULTRY DRIP FOUNTAIN
Charles De La Grange, El Monte, Calif.
Application September 4, 1945, Serial No. 614,244
2 Claims. (Cl. 119—74)

1. A drinking fountain for animals comprising a cup or bowl axially mountable on a water supply pipe and having a hollow stem axially rising from the bottom thereof, the upper portion of said stem being conically tapered, a valve seatable in said stem and axially adjustable therein, said valve having a head above the stem the bottom surface of which is undercut substantially to match the conical surface of the stem and spaced apart therefrom, there being a passage through the valve for water from said pipe to flow into the conical space between the valve head and the stem, the discharge opening from said conical space being below the rim of the bowl.



2,474,470
BELT SHIFTING MECHANISM
Merton L. Dodge, Seattle, Wash.
Application November 30, 1946, Serial No. 713,222
5 Claims. (Cl. 74—242.3)

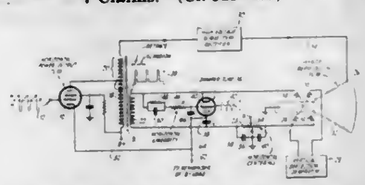
1. The combination with a pair of parallel shafts, V-belt pulleys mounted in alignment thereon, each having a plurality of V-belt grooves therein, a V-belt applied about the pulleys and selectively applicable to paired grooves thereof to effect a driving connection, a movable frame supporting one of the shafts, means for moving said frame to move the corresponding pulley toward the other pulley to effect the disengagement of the belt from the pulley grooves, a belt housing mounted for movement with the movable frame and adapted to receive the belt therein upon its being disengaged from the pulleys, and means for shifting said housing along the pulley to selectively register the belt as carried thereby,

with any other pair of pulley grooves for the automatic seating of the belt therein when the pulleys are moved apart to a belt tightening relationship and a hand lever operable both for the actuation of the movable frame-adjusting means and for the shifting of the belt housing along the pulley shaft.

2,474,471
SHOCK ABSORBER AND STABILIZER
Charles H. Dolan, II, Old Greenwich, Conn.
Application February 9, 1945, Serial No. 576,993
2 Claims. (Cl. 105—164)

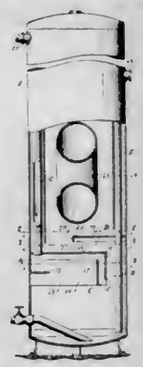
1. In a vehicle having a chassis with wheels and a body movably supported on the chassis, the combination of a shock absorbing and stabilizing device comprising a pair of hydraulic cylinders with pistons, each cylinder with its piston being interposed between one side of the chassis and a corresponding side of the body; an accumulator for each cylinder, the lower portion of the accumulator being in communication with the cylinder under the piston and arranged to contain the excess of a liquid filling the cylinder under the piston; means to admit a compressed elastic fluid into the accumulators for moving the pistons outwards in the cylinder thereby causing the pistons to support the weight of the respective sides of the body; and means to control the admittance of the compressed fluid independently in each accumulator for causing the body to bank when the vehicle is moving over a curved path.

2,474,472
DOMESTIC ELECTRIC HEATER
Charles C. Doyle, Willoughby, Ohio
Application March 20, 1945, Serial No. 583,679
6 Claims. (Cl. 219—34)



4. In an electric heater, the combination of a core, resistance wiring recessed in said core and adapted to glow, incombustible flickering particles movably overlying said wiring and a blower for actuating said pieces into contact with said wiring.

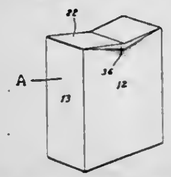
2,474,473
BALLAST LAMP
William C. Ellis, Maplewood, N. J., Louis H. La Forge, Jr., San Bernardino, Calif., and Addison H. White, Summit, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application January 29, 1947, Serial No. 725,006
6 Claims. (Cl. 201—76)



1. A ballast lamp comprising an envelope containing a resistance element of an alloy of cobalt, iron and an agent in the class of deoxidizers and desulphurizers.

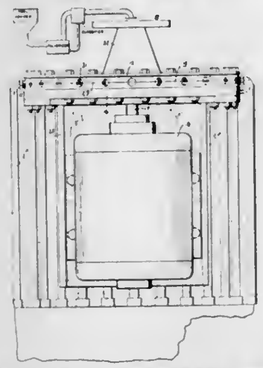
2,474,474
POWER RECOVERY CIRCUIT FOR CATHODE-RAY APPARATUS DEFLECTION SYSTEMS
Albert W. Friend, Cambridge, Mass., assignor to Radio Corporation of America, a corporation of Delaware
Application February 25, 1947, Serial No. 730,863
7 Claims. (Cl. 315—27)

1. In a cathode ray beam deflection circuit of the type in which a power output tube having at least an anode, a cathode, a control electrode, and a source of operating potential is adapted to deliver cyclically varying current to a cathode ray beam deflection coil unit through a coupling transformer when a cyclically varying voltage is applied to the said control electrode, a portion of each cycle of which varies in a substantially linear manner with respect to time and in which at least a portion of the primary winding of said transformer is connected in the anode-cathode circuit of said power tube and at least a portion of the secondary winding of said transformer is connected across said cathode ray beam deflection coil unit, the combination of a damper tube having at least an anode and a cathode, a connection from the cathode of said damper tube to a point on the secondary winding of said transformer on which a voltage of negative polarity appears during the said linearly varying portion of each cycle of the said cyclically varying voltage; an energy-storage device; a connection from the anode of said damper tube through said energy-storage device to a further point on the secondary winding of said transformer which is relatively positive with respect to the point to which the cathode of said damper tube is connected; means for connecting said energy-storage device in the anode-cathode circuit of said power tube additively in series with said source of operating potential, so that the energy stored in said device during operation of said circuit will effectively increase the normal value of the negative potential applied to the cathode of said power output tube from the said operating potential source, said damper tube is additionally provided with a control electrode, and further including means for applying a control voltage to the control electrode of said damper tube so as to vary the internal impedance of said damper tube during each cycle of the voltage variations applied to the control electrode of said power output tube.



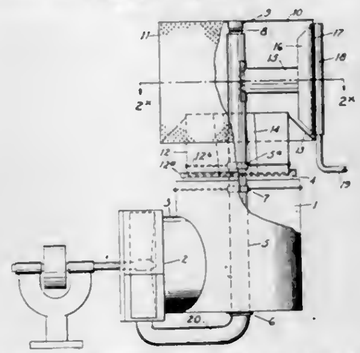
2,474,475
DEHYDRATOR
Clarence O. Glasgow, Tulsa, Okla., assignor to National Tank Company, Tulsa, Okla., a corporation of Nevada
Application May 14, 1945, Serial No. 593,724
18 Claims. (Cl. 210—47)

1. In combination in an emulsion treater, a tank having a heating chamber therein, means for heating the liquids in the heating chamber, a transverse plate defining the bottom of the heating chamber, a conductor for delivering an oil-water mixture to the tank below the plate at one side of the tank, an oil outlet from the plate



to the heating chamber for delivering oil to said chamber from below said plate spaced laterally of the tank from the conductor on the opposite side of the center of said tank, whereby the oil-water mixture is caused to flow generally laterally from said conductor to said outlet along the underside of said plate and spread in a broad stratum under said plate, means below said plate to divert the lateral flow of the liquids in advance of the outlet to permit water to precipitate from the oil-water mixture, and means for carrying off separated water from the tank.

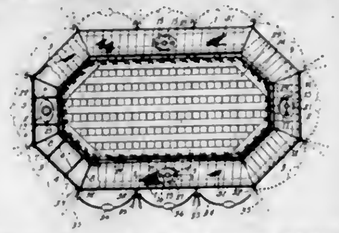
2,474,476
CARTON
Reynolds Guyer, St. Paul, Minn., assignor to Waldorf Paper Products Company, St. Paul, Minn., a corporation of Minnesota
Application December 9, 1944, Serial No. 567,371
4 Claims. (Cl. 229—5.5)



1. A carton comprising substantially tubularly arranged side walls, end closing flaps issuing therefrom, and narrow substantially triangular areas at the upper extremity of two opposed side walls tapering to the planes of said two walls at the side edges thereof and underlying the closure flaps and forming marginal supports therefor in closed position thereof.

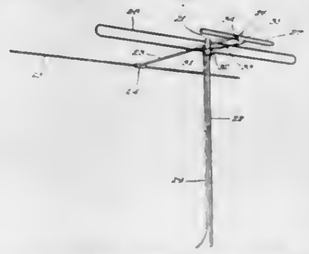
2,474,477
PULVERIZED FUEL DISTRIBUTOR FOR BURNER NOZZLES
Floyd T. Hague, Drexel Hill, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 6, 1946, Serial No. 714,557
1 Claim. (Cl. 302—28)

In apparatus for distributing a mixture of pulverized fuel and air to a plurality of nozzle-supply passages, an impeller disc having vanes at opposite sides thereof defining impeller passages, an impeller housing providing an annular chamber encompassing the impeller and including opposed walls having close clearance with respect to said vanes, said chamber having circumferentially-distributed outlets for the respective passages with the outlets disposed outwardly from the impeller periphery, and a pulverized fuel and air mixture supply conduit communicating with the central portion of one side of the impeller so that the latter is effective to produce flow of mixture into the impeller at high velocity and to act on the mixture to discharge it through the vane passages at said one side into the annular chamber for flow through the outlets to the nozzle-supply passages.



2,474,478
AIR CLEANING APPARATUS
Joseph L. Hart, Jr., Chickasha, Okla.
Application September 13, 1945, Serial No. 615,976
7 Claims. (Cl. 183—61)

2. In an air cleaning device the combination with an air circulating fan having a casing forming an inlet suction side and a pressure outlet side, the former extending vertically and open at its top, of a cylindrical screen axially supported above the top of said inlet, of a hollow drum depending from the screen and surrounding said inlet, vanes mounted in the drum, an air nozzle connected to the pressure side of said fan casing extending vertically within and adjacent one side of the screen and a receiver on the exterior of the screen for the material dislodged by the blast from the nozzle.

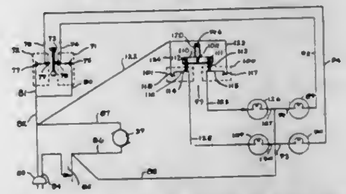


2,474,479
LIFE RAFT OR FLOAT
Jesse L. Justice, Huntington Park, Calif., assignor to L. A. Young Spring & Wire Corporation, Detroit, Mich.
Application June 8, 1944, Serial No. 539,251
10 Claims. (Cl. 9—11)

1. In a life raft or float, the combination of a frame-like buoyant body comprising side and end corner body members, each body member comprising a plurality of tubular sheet metal sections disposed end to end, flanged bulkheads between the sections, the flange of a bulkhead telescopingly engaging within the end of one section and the adjoining end of an adjacent section, the adjacent edges of the sections being welded to each other and to the flanges of said bulkheads, the side and end corner body members having mitered joints, and flat bulkheads disposed at such mitered joints, the adjacent edges of the body members at said mitered joints being welded to each other and to said last named bulkheads, such

assembly providing a plurality of water-tight compartments.

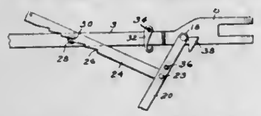
2,474,480
ANTENNA SYSTEM
George P. Kearse, Chicago, Ill., assignor to American Phenolic Corporation, Chicago, Ill., a corporation of Illinois
Application May 18, 1948, Serial No. 27,662
7 Claims. (Cl. 250—33.65)



3. In an antenna system, the combination, with a radio frequency transmission line, of a pair of folded dipoles comprising a first and second dipole at substantially the same horizontal level and spaced apart from each other whereby one may act as a reflector for the other, and means for isolating said second dipole from the first dipole at the resonant frequency of the first dipole comprising an additional loose loop of transmission line joining said second folded dipole to the transmission line and the first folded dipole.

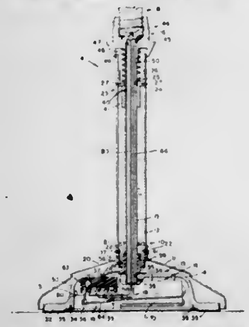
2,474,481
FISH LURE
Emil Kleppen and Ingwald B. Hansen, Minneapolis, Minn.
Application May 1, 1946, Serial No. 666,328
1 Claim. (Cl. 43—35)

An artificial bait comprising a hollow body having the shape of a fish and consisting of a main section and a removable side section, the side section being shorter than the main section and having its rear end spaced forwardly from the rear end of the main section and formed with a beveled rear end face extending its full width and fitting under a forwardly extending tongue formed integral with and extending the full width of the rear portion of the main section, said body defining an integral chamber having side walls and upper and lower edge walls and having an opening at its front end and upper and lower longitudinally extending slots adjacent the rear end of the removable side section and formed by registering recesses in meeting edge faces of the said sections, a screw passing thru an opening in the main section and screwed into a socket in the removable section to hold the said sections together, hooks extending longitudinally in the chamber of the body and having heads at front ends of their shanks formed with openings thru which said screw passes to pivotally mount the hooks for swinging movement about the screw from a retracted position within the chamber to an extended position in which their bills project outwardly thru the upper and lower slots, arms extending laterally from and rigid with the outer side edges of said heads, a U-shaped yoke of resilient wire in the forward portion of the chamber having an eye at its front end and outwardly bowed arms extending rearwardly therefrom and terminating in eyes loosely engaged thru eyes at ends of the arms of said hooks, and a rod extending thru the opening at the front end of said body and having an eye at its rear end loosely engaged with the eye of said yoke and its front end adapted for connection with a fishing line, forward pull upon said rod serving to draw the yoke forwardly and exert pull upon the arms of the hooks to swing the hooks about the screw to an extended position, and resiliency of the yoke serving to return the hooks and the rod to a normal position when pull upon the rod is released.



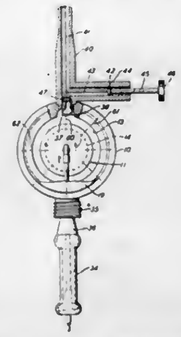
2,474,482
TESTING INSTRUMENT FOR MACHINED PARTS
John B. Lovick, Glendale, Calif., assignor to Allied Appliance Co., Los Angeles, Calif., a copartnership comprising William P. Todd and Milton C. Miller, Jr.
Application March 28, 1944, Serial No. 528,457
3 Claims. (Cl. 177—311)

1. A testing device to receive a work piece to be inspected and upon which linear dimensions are to be measured, which comprises a base structure, a fixed bearing standard carried thereby, a movable bearing standard carried thereby, means whereby the movable standard may be set adjustably with relation to the fixed standard, a spindle mounted upon the fixed standard and held against longitudinal movement, a spindle mounted upon the movable standard and adapted to be longitudinally movable, a pair of chucks, one carried by the fixed spindle and one carried by the movable spindle and between which the article to be tested is held, switch actuating means associated with the movable spindle, a two-way switch operated by said switch actuating means, one of said switch elements being closed in the event the length of the portion of the article to be



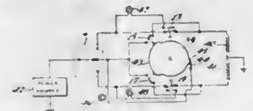
tested and occurring between the chucks is greater than a predetermined distance and the other acting when the article to be tested is less than a predetermined distance, and means associated separately with said switches to indicate the operation of the same.

2,474,483
TRAILER DRAWBAR SUPPORT
James E. Luttrell, Burgess Store, Va.
Application November 21, 1946, Serial No. 711,374
2 Claims. (Cl. 280—33.4)



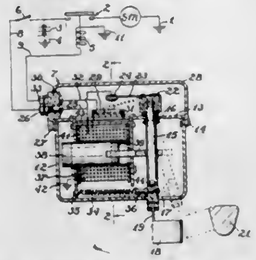
1. In combination with the draw bar of a trailer which draw bar comprises a pair of arms with a cross shaft provided with a sharp ratchet-engaging edge extending therebetween, a pivoted leg lowerable into ground-engaging positions to elevate the draw bar upon reverse movement of the trailer, a notched arm providing a ratchet pivoted on said leg for securing said leg in a vertical draw bar supporting position, said ratchet engaging said sharp edge in said cross shaft of said draw bar, a pivoted hook for securing said leg in inoperative position, said hook being secured to said draw bar, and a lug on said pivoted leg adapted to be seated in said hook when said leg is in inoperative position.

2,474,484
ELECTRIC LIGHTING FIXTURE
Vincent J. Marchese, Brooklyn, N. Y.
Application April 13, 1948, Serial No. 20,771
5 Claims. (Cl. 240—123)



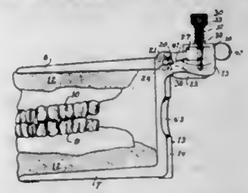
1. In an electric lighting fixture, a support structure including a standard, a housing structure, including a tubular portion spaced from and extending about said standard, means for supporting said housing structure by said support structure so that said tubular portion may be oscillated with respect to said standard structure, including a ring-shaped element fixedly secured to the inner face of said tubular portion, intermediate the ends of said tubular portion and normally spaced from said standard, and a second ring-shaped element fixedly secured to the outer periphery of said standard, the outer periphery of said second element being less in circumference than the interior circumference of said tubular portion and greater in circumference than the circumference of the outer periphery of said first element, said first element being disposed upon said second element, coupling means to attach an electric lamp to the upper end of said standard, including a socket structure having a body portion provided with a lower face and a downwardly opening skirt portion extending from said face, with the upper end of said tubular portion disposed within said skirt portion and normally spaced therefrom and from said face, resilient means within said skirt portion and upper end of said tubular portion normally urging said upper end away from said face, a pair of electric terminals carried by said coupling means, an electric contact secured to the inner face of said tubular portion below said first element, an electric contact secured to the outer face of said standard, normally spaced from said first contact and disposed within the path of travel of said first contact upon oscillation of said tubular portion, an off-and-on electric switch, electric means for actuating said switch upon abutment of said contacts, an electric lead from one of said contacts to one of said terminals, an electric lead from the other of said terminals to one of the terminals of said switch, a lead from the other of said contacts to the other terminal of said off-and-on electric switch, and means placing said electric means in circuit with said fixed contact and one of said terminals of said off-and-on switch.

2,474,485
MAGNETRON OSCILLATOR
Warren P. Mason, West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application September 14, 1944, Serial No. 554,111
6 Claims. (Cl. 315—39)



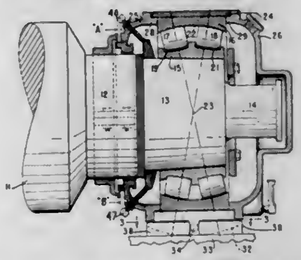
6. A magnetron for generating harmonic oscillations comprising a pair of opposed substantially smooth coaxial cylindrical conductors forming a substantially uniform continuous transmission line resonator in the space between said conductors, one of said conductors constituting a cathode and the other of said conductors constituting an anode, means for maintaining a steady magnetic field with lines of magnetic force parallel to the axis of said coaxial conductors, a side branch transmission line opening out from said resonator and forming a sole principal node-determining irregularity in the symmetry of the said resonator, and means in said side branch transmission line for adjusting the length of said side branch transmission line to tune said resonator to produce oscillations in said magnetron at a harmonic resonant frequency of said resonator.

2,474,486
CONTROL MECHANISM FOR POSITIONING A MAST IN ALTERNATE PREDETERMINED POSITIONS
Alan C. Middleton, Point Pleasant, N. J.
Application December 5, 1945, Serial No. 632,888
7 Claims. (Cl. 318—2)



6. A control device for selectively positioning a mast in alternate, predetermined positions, comprising a shaft assembly including means for mounting the mast to be positioned, mechanical speed reducing means connecting the motor to the mast through the shaft assembly, means for remotely controlling the motor to position selectively the mast in any one of several predetermined positions, means for causing the motor to confine the travel of the mast to the angle subtended by the outermost of the predetermined positions and for de-energizing the motor responsively to the mast reaching the said predetermined position, the shaft assembly including a mast-carrying shaft, and manually releasable coupling means normally coupling the mast-carrying shaft to the motor for actuation of the shaft by the motor, while enabling manual disconnection of the shaft from the motor for manual operation of the shaft and mast.

2,474,487
BACKFIRE CIRCUIT BREAKER
Donald L. Miller, Pine City, N. Y., assignor to Bendix Aviation Corporation, Elmira Heights, N. Y., a corporation of Delaware
Application June 10, 1947, Serial No. 753,725
7 Claims. (Cl. 200—52)



1. In an automatic circuit controller, a lever, means supporting the lever with provision for rotation about its longitudinal axis and swinging movement about an axis perpendicular thereto, a laterally extending control arm at one end of the lever having means for frictionally engaging a movable part, a laterally extending support on the lever carrying an electrical contact; an electrical circuit including a fixed contact adapted to cooperate with the movable contact, means normally holding the lever with its arm disengaged and the contacts open; and means for swinging the lever so as to engage the control arm with the movable part and close the contacts, said fixed contact being so located that pivotal movement of the lever around its longitudinal axis caused by engagement of the control arm with the movable part when it is moving reversely to its normal direction, prevents the movable contact from engaging the fixed contact.

2,474,488
DENTAL ARTICULATOR
Wayne W. Moore, Chicago, Ill.
Application July 1, 1946, Serial No. 680,701
9 Claims. (Cl. 32—32)

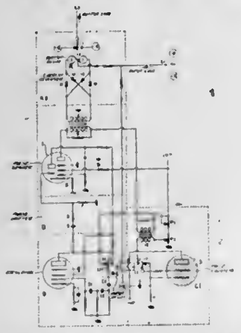
8. Means for yieldingly maintaining upper and lower denture supporting members of a dental articulator in pivotal relation about pivot means provided therebetween comprising, a pair of jaw members individually pivotally mounted intermediate their ends on spaced pivot pins supported by said lower member, said jaw members having portions at one of the ends thereof for engaging said upper member and finger grip portions at their other ends for individually or simultaneously retracting said jaw members from engagement with said upper member, and a coil spring supported by said lower member between said jaws with the opposite ends of the coil spring in engagement with said jaw members and normally biasing the latter to engage the said one ends thereof into engagement with said upper member.

2,474,489
ROCKER MOUNTING FOR ROTARY BEARINGS
Robert W. Mortensen, Beloit, Wis., assignor to Beloit Iron Works, Beloit, Wis., a corporation of Wisconsin
Application February 7, 1946, Serial No. 645,994
4 Claims. (Cl. 308—207)

1. A mounting for a rotary shaft which has a portion subject to axial displacement incident to its use, comprising a bearing for said shaft portion comprising an inner race, an outer race and anti-friction members therebetween, said outer race having a spherical bearing face struck

from a center coincident with the center of said shaft portion, the bearing members having spherical faces conforming with the spherical bearing face of the outer race, a housing supporting the outer race, a base support for the

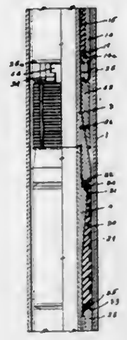
polarity of the signal element applied at a given instant to said line input terminal, whereby the direction of application of pulses from said pulse former to the two windings in series of said output relay is determined by the polarity of



gagement with said blade, means for moving said support in one direction generally longitudinally of said cutting edge from the point at which said pit is adapted to engage said edge but slightly convergently relative to said edge whereby progressively increased frictional resistance between

---

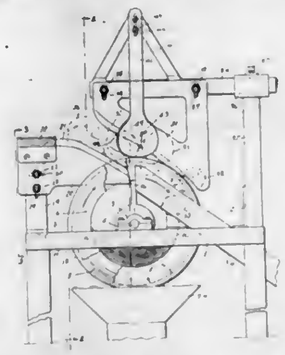
2,474,494
TIME SWITCH
Edward V. Platt, Manitowoc, Wis., assignor to Paragon Electric Company, Two Rivers, Wis., a corporation of Wisconsin
Application October 6, 1947, Serial No. 778,071
3 Claims. (Cl. 200—39)



from a center coincident with the center of said shaft portion, the bearing members having spherical faces conforming with the spherical bearing face of the outer race, a housing supporting the outer race, a base support for the housing having a supporting surface, the housing having an undersurface on an arc struck from said center, said undersurface resting on said supporting surface, the housing having rocking motion on said base support in response to said axial displacement of said shaft portion, a guide pin on each side of said bearing housing adjacent to its arcuate undersurface and guide surfaces fixed to the base support on opposite sides of each guide pin to confine the lower end of the bearing housing against movement in said axial direction during rocking motion of the bearing housing.

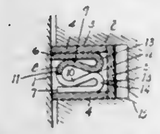
2,474,490
START-STOP REGENERATIVE REPEATER
Pierre Pellé, Arcueil, France
Application May 9, 1945, Serial No. 592,770
In France February 10, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires February 10, 1964
10 Claims. (Cl. 178—70)

8. In a telegraph repeater regenerating system transmitting signal trains of signal elements of both polarities of uniform duration determined by a definite keying frequency including initial starting and final stop elements, an input relay having a principal winding and an opposing bias winding, an output polarized relay having two windings connected in series and having two controlled contacts, connected respectively for applying voltages of opposite polarity to its armature, a line input terminal connected to the common terminal of said windings of said output relay and also connected to said principal winding of said input relay, a blocking oscillator tube of said keying frequency and having its blocking circuit connected to a controlled contact of said input relay for becoming unblocked upon receipt of a start pulse by said input relay, a phase shifter connected to the output of said oscillator tube, a narrow pulse former connected to the output of said phase shifter and adapted to form a narrow pulse on the positive peaks of the output of said phase shifter, a rectifier bridge having two terminals connected to the output of said pulse former and having its other two terminals connected to the outer terminals of the windings of said output relay, said rectifier bridge having only one of its pairs of arms conductive at a given time as determined by the polarity of the signal element applied at a given instant to said line input terminal, whereby the direction of application of pulses from said pulse former to the two windings in series of said output relay is determined by the polarity of the instantaneous signal element applied to the input terminal, and regenerated undistorted signals are delivered to the armature of said output relay.



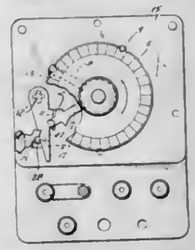
2,474,491
PACKER FOR WELLS
Arthur J. Penick, Houston, Tex., assignor to Oil Center Tool Company, Houston, Tex., a corporation of Texas
Application October 20, 1944, Serial No. 559,530
5 Claims. (Cl. 166—12)

1. In a packer assembly adapted to be lowered into a casing in a well, two tubular telescoping parts movable axially relative to each other and forming a packer support, a resilient, expansible, sleeve-like packer around one of said parts, annular substantially transverse, shoulders on the respective parts spaced from the corresponding ends of the packer, a dished ring of pliant, malleable material around said support between each shoulder and the adjacent end of the packer, the upper and lower surfaces of each ring converging outwardly with respect to the corresponding surfaces of the other ring thus providing annular, outwardly flared, spaces between said rings and the adjacent shoulders, said shoulders being movable toward each other to apply endwise compressive force to the packer to expand the packer, said rings being tiltable about their inner margins, in response to said force, and deformable to bridge the space between the packer support and casing.



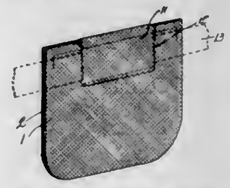
2,474,492
APPARATUS FOR HALVING AND PITTING APRICOTS
Joseph Perrelli and John Perrelli, Richmond, Calif., assignors to Perrelli Freestone Machine, Inc., Richmond, Calif.
Application September 25, 1944, Serial No. 555,632
5 Claims. (Cl. 146—17)

1. A pitter for apricots and the like comprising a cutting blade having a cutting edge for cutting through one side of a whole apricot to a point on the suture of its pit, a support spaced from said blade engageable with the outer surface of such apricot at the side of the body opposite said point for holding the said point in engagement with said blade, means for moving said support in one direction generally longitudinally of said cutting edge from the point at which said pit is adapted to engage said edge but slightly convergently relative to said edge whereby progressively increased frictional resistance between said edge and said pit will effect rotation of said



apricot on said support and bisecting of the body of said apricot together with freeing the pit from said body said blade being free at its opposite sides in the planes of the latter for movement of the fruit halves thereover in said planes in direction away from said edge during engagement of said halves by said support.

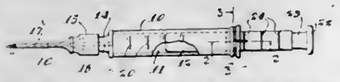
2,474,493
PISTON RING ASSEMBLY AND SPACER THEREFOR
Harold P. Phillips, Hastings, Mich., assignor to Hastings Manufacturing Company, Hastings, Mich., a corporation of Michigan
Application April 2, 1945, Serial No. 586,152
6 Claims. (Cl. 309—44)



1. An annular split spacer for a pair of thin cylinder wall engaging segments comprising upper and lower radially extending flanges, the upper flange constituting a cylinder wall engaging element, and a connecting web therefor, said web being conformed into a radially disposed loop of substantial radial width, the bight of the loop being curved, the sides of the loop adjacent its outer end being in supporting engagement with said flanges, the loop being closed at its inner end and joined to the inner edges of the flanges by reverse curves whereby the associated cylinder wall engaging elements are supported in spaced relation substantially throughout the width thereof, the lower flange and the lower side of the loop having spaced slots therein providing drain openings, the lower flange and the lower side of the loop extending circumferentially of the spacer intermediate said slots and terminating at the edges of said slots.

2,474,494
TIME SWITCH
Edward V. Platt, Manitowoc, Wis., assignor to Paragon Electric Company, Two Rivers, Wis., a corporation of Wisconsin
Application October 6, 1947, Serial No. 778,071
3 Claims. (Cl. 200—39)

1. A time switch comprising motor driven timing means including a first tripper and a second tripper, a switch operating arm arranged to be moved in a first and a second direction by said first and second trippers, respectively, a sliding and rocking cradle, spring means between said cradle and said arm for storing up energy when said arm is rocked, latching means including a barrier and a lug carried by said cradle for latching said cradle, means operated by said arm for unlatching said cradle from said barrier by sliding said cradle, a first and a second switch operated by said cradle and arranged to alternately close and open when said arm is moved to said first and second positions, respectively, to correspondingly rock said cradle, a first stop located on one side of said barrier and spaced therefrom and a second stop located on the other side of said barrier and spaced therefrom a greater distance than said first stop, biasing means biasing said cradle towards said first stop for said first position of said arm, said second tripper being arranged to temporarily hold said arm against said second stop for said second position of said arm and arranged to subsequently release said arm for motion due to said biasing means, said barrier being effective to stop said cradle in a neutral position with both said switches open.



2,474,495
BELT PURSE
Harry Pollak, San Francisco, Calif.
Application May 1, 1946, Serial No. 666,354
2 Claims. (Cl. 224—26)

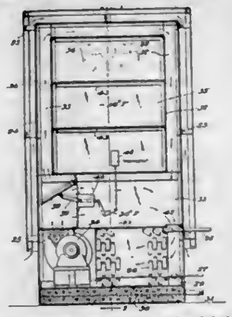
2. In a belt purse of the character described, a back piece, a front piece secured at its edges over the back piece to form a bag therebetween, the upper edge of said front piece being free to form an opening for said bag, and a strip of material secured over the top edge of said back piece and extending downwardly over the outer face of said back piece and being secured thereto

at its lower end to form a loop upon the outer face of said back piece adapted to be drawn over a belt or the like, and a separator piece secured at its side and lower edges to the seams of said back piece and front piece and being free at the top to divide compartments between said back piece and front piece.

2,474,496
SYRINGE
Lawrence Rayman, Toledo, Ohio
Application June 26, 1947, Serial No. 757,253
1 Claim. (Cl. 128—218)

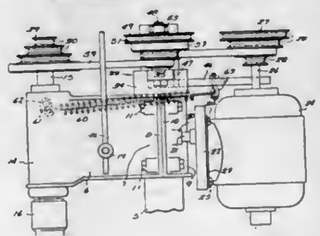
A hypodermic syringe comprising a barrel portion and a plunger, said plunger having a plurality of graduations formed thereon extending circumferentially thereabout, said graduations being in the form of depressions formed on the plunger, said depressions being coextensive in length and in stacked alinement, said barrel portion having a resilient cantilever type clip with converging clip elements forming a bight portion mounted externally thereon, the bight portion of said clip engaging the periphery of the plunger which extends outside of said barrel portion, and adapted to cooperate with said depressions in the plunger when the plunger is moved inwardly or outwardly in a straight line movement for resiliently restraining at the depressed portions the longitudinal displacement of the plunger, thereby facilitating measurement of units of fluid drawn into or ejected from said barrel.

2,474,497
PRODUCTION OF CUPROUS HYDROXIDE AND CUPROUS OXIDE
Percy J. Rowe, Hubbell, Mich., assignor to Lake



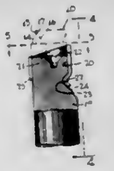
NH_3 and from 20 grams per liter to saturation of copper, said copper being present in cuprous form in a major amount but also comprising a substantial amount thereof in cupric form, the caustic alkali being present in such concentration and such amounts that cuprous copper is precipitated as cuprous hydroxide and substantially all of the cupric copper remains in solution, and separating the precipitate of cuprous hydroxide from the reaction mixture.

2,474,498
FISHING FLOAT
Harold C. Schwabe, Shawano, Wis.
Application November 18, 1947, Serial No. 786,611
3 Claims. (Cl. 43—49)



3. A fishing float comprising a float body of generally ovate formation having an annular slot surrounding the same and a vertical slot extending along the major vertical axis of the float body and outwardly through the side surface of the float body and lengthwise thereof for receiving a fishing line inserted laterally therein, a key having the same general contour as said vertical slot and adapted to be received within the slot to engage the fishing line, and having an outer slot coinciding with said annular slot in the float body, said key having an inner slightly concave edge providing upper and lower edges for engaging the fishing line to insure a tight grip on the line, and

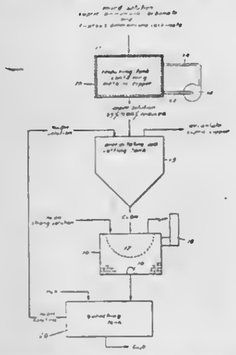
ber, and means for circulating air through said relatively thin chamber from said high tempera-



ture chamber for refrigerating the high temperature chamber.

2,474,500
HIGH-LOW SPEED ATTACHMENT FOR DRILL PRESSES
Frederick Kenneth Stein, Rockford, Ill.
Application January 7, 1948, Serial No. 1,023
5 Claims. (Cl. 74—242.11)

resiliently engages an adjacent complemental portion of the anvil to urge said sleeve normally into a position in which its free end may serve to locate the work on the anvil, whereby said



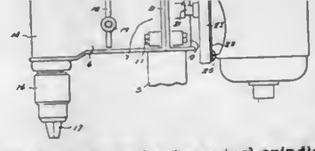
sleeve may recede against said resilient holding action in response to a hammer blow against said sleeve, but will thereafter be restored by said resilient engagement to its aforesaid work-positioning location.

2,474,502
METALLIZATION OF ELECTRICALLY NON-CONDUCTIVE FABRICS, FIBROUS MATERIALS, AND POROUS MATERIALS
Charles T. Suchy, London, England
No Drawing. Application March 5, 1945, Serial No. 581,169. In Great Britain February 29, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires February 29, 1964
4 Claims. (Cl. 204—20)

1. Process for the metallization of electrically non-conductive fabrics, electrically non-conductive fibrous materials, and electrically non-conductive porous materials, which process comprises rendering the internal structure of the material electrically conductive by immersing the material in a colloidal silver solution to which is added a reducing solution to deposit metallic silver within the internal structure of the material being treated; thoroughly drying the material, and then brushing the surface thereof to rid the same of any metallic silver deposited thereon and restore

barrel.

2,474,497
PRODUCTION OF CUPROUS HYDROXIDE AND CUPROUS OXIDE
Percy J. Rowe, Hubbell, Mich., assignor to Lake Chemical Company, Calumet, Mich., a corporation of Michigan
Application February 16, 1946, Serial No. 648,153
2 Claims. (Cl. 23—147)

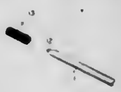


1. A process comprising the steps of mixing with a caustic alkali of the class consisting of sodium and potassium hydroxides an aqueous, ammoniacal copper carbonate solution, said solution containing per liter on an analytical basis from 30 to 70 grams CO_2, from 35 to 75 grams of

ing the same general contour as said vertical slot and adapted to be received within the slot to engage the fishing line, and having an outer slot coinciding with said annular slot in the float body, said key having an inner slightly concave edge providing upper and lower edges for engaging the fishing line to insure a tight grip on the line, and a slotted ring of spring material positioned in said annular slot and adapted to be rotated therein to apply spring pressure on said key and fishing line engaged thereby, said ring having a curved peripheral surface bulging outwardly from the surface of the float body to provide a gripping surface to facilitate turning the ring in said annular slot.

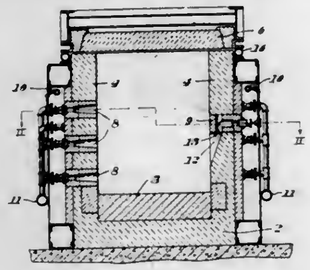
2,474,499
MULTIPLE TEMPERATURE REFRIGERATING UNIT HAVING AIR CIRCULATING MEANS
Charles L. Spoonhour, Waynesboro, Pa., assignor to Frick Company, Waynesboro, Pa., a corporation of Pennsylvania
Application May 24, 1945, Serial No. 595,588
12 Claims. (Cl. 62—102)

1. In a refrigeration system a cooling unit, walls defining a quick-freezing chamber, walls defining a low temperature chamber, means for circulating refrigerated air through said quick-freezing chamber, and in contact with the walls defining the low temperature chamber for refrigerating said chambers, wall structure confining the air circulated in contact with the wall of said low temperature chamber in a manner such that said confining wall structure is refrigerated, additional wall structure defining with said confining wall structure a relatively thin chamber about said confining wall structure, and means providing a high temperature refrigerating chamber exteriorly of said relatively thin cham-



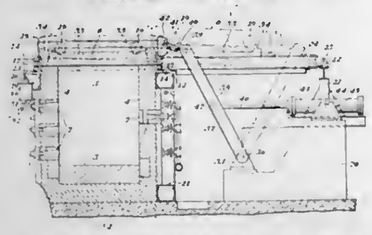
1. In a drill press having a tool spindle and a drive motor supported by a vertical column, an arm supported by said column, stepped cone pulleys mounted on each end of said arm with the stepped grooves thereof arranged in reverse relation, a transmission belt interchangeably positioned around said pulleys, an interchangeable transmission belt drivingly connecting the motor to one of said pulleys and an interchangeable transmission belt drivingly connecting the other of said pulleys with the tool spindle.

2,474,501
CLINCH NUT ANVIL WITH NUT-POSITIONING SLEEVE
William Stever, Philadelphia, Pa., assignor to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application August 28, 1946, Serial No. 693,481
3 Claims. (Cl. 218—1)



3. In a riveting machine for heading over an article having a base portion adapted to rest upon an anvil, and an upper portion designed to be headed over toward said base portion, the combination comprising an anvil and a work-positioning sleeve slidably embracing the anvil and projecting beyond the work-supporting face thereof, said sleeve including a portion which

2,474,503
SEAL FOR FILLER TUBES
William C. Weis, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a corporation of New York
Application April 25, 1947, Serial No. 743,771
2 Claims. (Cl. 220—67)



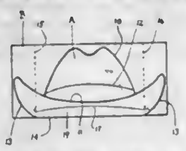
1. A seal for the end of a ductile metal tube or like comprising, a cold weld sealing an end of said tube, a porous metal sleeve enclosing said weld, and solder or the like adhering to the entire sealed end of said tube as well as to the entire surface of said sleeve substantially filling the same.

2,474,504
HEATING INGOTS
Carl H. West, St. Clairsville, Ohio, assignor to Blaw-Knox Company, Pittsburgh, Pa., a corporation of New Jersey
Application October 20, 1944, Serial No. 559,500
1 Claim. (Cl. 263—43)

In a soaking pit furnace for heating ferrous ingots, in combination, a rectangular heating chamber having substantially vertical opposed walls, a plurality of burners positioned in a substantially regular pattern over a major portion of the surface of each of one pair of said opposed walls and adapted to constitute substantially the sole heating source for said furnace and to be in close proximity to said ingots, a majority of said burners on each of said pair of opposed walls being directed inwardly into said heating chamber in a direction normal to said opposed walls and adapted to project unburned combustible material about and among said ingots for combustion in said heating chamber, the remainder of said burners on each of said pair of opposed walls being directed downwardly and inwardly into said heating chamber in alternate relation to the burners in said majority of said burners, said burners on said pair of opposed walls being arranged in successive spaced vertical planes substantially normal to said opposed walls, whereby ingots placed in said furnace in conventional manner are heated to uniform temperature in intimate contact with the flames from said combustion of said combustible material.

2,474,505
FURNACE COVER OPERATING MECHANISM
Carl H. West, St. Clairsville, Ohio, assignor to Blaw-Knox Company, Pittsburgh, Pa., a corporation of New Jersey
Application December 1, 1944, Serial No. 566,155
3 Claims. (Cl. 268—10)

1. A furnace cover operating mechanism for a furnace chamber or the like having an opening adapted to be closed by a furnace cover acting under the force of gravity, comprising in combination, a furnace cover adapted to close said opening when in operative position, said cover being further adapted to be substantially entirely removed from said opening by translatory movement only substantially in the plane of the closure effected by said cover, generally parallel rigid tracks extending on opposite sides respectively of said opening and adapted to support said cover during said translatory movement thereof, said tracks extending beyond said opening in the direction of said removal of said cover a distance at least equal to the length of said cover in said direction of movement, spaced supporting members on one side of said cover adjacent at least one of said tracks, at least one supporting member on the opposite side of said cover adjacent at least another of said tracks, said supporting members adapted to be supported on said tracks for substantially rolling engagement therewith during said translatory movement of said cover, means for simultaneously moving said tracks at at least one end thereof when said cover is in operative position in a direction away from the bottom of said opening toward said opening to cause said tracks to engage said supporting members and lift said cover out of said operative position, said means being further adapted to be moved in a direction toward the bottom of said opening to allow said cover to move into operative position and to disengage said tracks from said supporting members, a swingable member pivotally connected to said cover and adapted to move said cover when said tracks have lifted it out of operative position, means for swinging said swingable member, said means being substantially entirely positioned in the direction of the side of the exposed face of said cover when in operative position, whereby said cover in operative position remains unaffected by any warpage in said tracks and upon removal of said cover said cover does not extend substantially beyond the plane it occupied when in operative position.



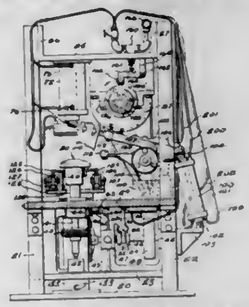
2,474,506
METHOD OF MAKING PHOSPHOR MATERIALS
Elton J. Wood, Hopewell, N. J., assignor to Radio Corporation of America, a corporation of Delaware
No Drawing. Application January 4, 1946, Serial No. 639,155
4 Claims. (Cl. 252—301.6)

1. The method of preparing a phosphor adapted for rapid quenching by infra red wave energy which consists in heating to temperatures of 1000° C. to 1400° C. for five to thirty hours in air, a mixture of zinc sulphide, a member in activator proportions selected from the group consisting of copper and silver and mixtures thereof and a flux of 5% to 25% of a halide of an alkali metal and excluding the iodide and ammonium, said percentages being based on the weight of the zinc sulphide.

2,474,507
PLAY HAT
Paul Wolfe, St. Paul, Minn., assignor of one-half to Robert V. Mealey, St. Paul, Minn.
Application July 14, 1944, Serial No. 544,841
2 Claims. (Cl. 2—175)

1. A play hat comprising a flat sheet of flexible material cut to the outline configuration of a hat, a transverse slot terminating at points spaced from the lateral edges of said sheet, said slot dividing said sheet into a hat body and a

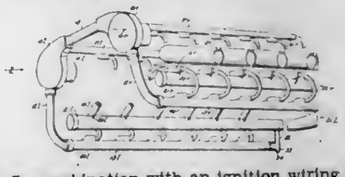
band terminally connected to said hat body, and parallel aligned score lines in both the hat body



and band portions of said sheet on both sides of the slot at the ends of said slot.

2,474,508
SUCTION-OPERATED CHUCK
John M. Wyer, Perton, Pattingham, near Wolverhampton, England
Application September 30, 1946, Serial No. 700,221
In Great Britain October 3, 1945
4 Claims. (Cl. 279—3)

3. A rotatable chuck by which articles are held in engagement therewith by suction comprising a casing in which suction is applied, a base of said casing, a cylindrical side wall extending forwardly from said base, said side wall being open at its forward end, a centrally extending arbor rigid with said base, an annular space between said arbor and said wall, a suction passage in communication with said annular space, an annular filter in said space, an annular part surrounding the forward end of said arbor and being slidable thereon, elastic pressure means against the force of which said annular part can yield back, friction means at the forward face of said annular part with which the base of an article to be operated upon can be drivingly engaged, and driving means between said arbor and said annular part, a groove formed across the front face of said arbor, a bar located in said groove and having its ends projecting radially from the periphery of said arbor and recesses in said annular part in which the ends of said bar engage.



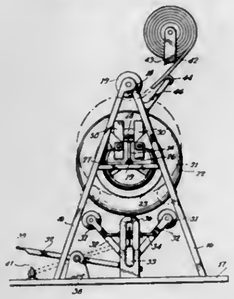
2,474,509
JIGGERING MACHINE FOR FORMING ARTICLES OF PLASTIC CLAY
Harold F. Allen, De Witt, N. Y., assignor to Stewart F. Hancock, Syracuse, N. Y., as trustee
Application May 29, 1944, Serial No. 537,814
9 Claims. (Cl. 25—24)

1. A machine for forming articles of plastic material comprising a suitable frame, a spindle journalled in the frame and adapted to support a mould with plastic material thereon, a forming tool mounted on the frame in juxtaposition to said spindle and being movable from an initial position above a mould mounted on the spindle toward and from the mould and into engagement with the plastic material thereon to form the same, a power drive operable when connected to said spindle to effect rotation thereof, a clutch means for connecting and disconnecting said power drive, a fluid operated motor connected to said tool, valve means for connecting said motor to a fluid supply, valve operating means operable through a cycle to effect movement of said valve means in a predetermined timed sequence to cause said motor to move said forming tool from its initial position toward the mould, and into engagement with the material thereon and, upon completion of the forming operation, to return said tool to its initial position, a clutch

actuating means operable by said valve operating means to effect engagement of said spindle clutch means during the forming operation, and manually controlled regulating means for varying the movement of the forming tool by the motor, and for varying the engagement of said clutch means during said cycle.

2,474,510
IGNITION SYSTEM
James L. Arthur, Indianapolis, Ind., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application November 13, 1944, Serial No. 563,285
2 Claims. (Cl. 123—148)

1. In combination with an ignition wiring system for a V-type internal combustion engine of a vehicle; a pair of ignition distributors; a housing for enclosing each distributor; a spark plug against each inlet valve of the engine; a spark plug adjacent each exhaust valve of the engine; a cross manifold connected to both housings and first and second cable manifolds extending respectively from the housings for enclosing cables leading from one of the distributors to spark plugs adjacent the inlet valves; third and fourth cable manifolds connected respectively with the housings for enclosing cables leading from the other distributor to spark plugs adjacent the exhaust valves; two fresh air manifolds adjacent the exhaust valves for receiving fresh air when the vehicle moves and having passages for directing air upon the spark plugs adjacent the exhaust valves to cool the same; tubes each for transferring some of the air from a fresh air manifold respectively to the third and fourth cable manifolds and passages provided by the first and second cable manifolds to allow air to escape after it has circulated through the third and fourth manifolds, the housings and the first and second manifolds.



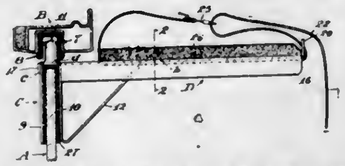
2,474,511
DEVICE FOR APPLYING NEW TREAD MATERIAL TO TIRES

2,474,513
BRACKET ATTACHMENT FOR MOTOR VEHICLE WINDOWS

casing and their straight rear ends crossed and pivotally connected, two flat rectangular heads rigidly joined at their centers to the free ex-

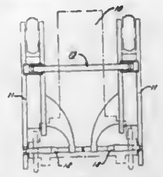
form a ledge, a ring shaped notcher mounted upon said standard and supported by said ledge, said notcher and said plug including means cooperating to hold the notcher in fixed relation

2,474,511
DEVICE FOR APPLYING NEW TREAD MATERIAL TO TIRES
Thomas P. Bacon, Jr., Oakland, Calif.
Original application December 7, 1942, Serial No. 468,320, now Patent No. 2,422,652, dated June 24, 1947. Divided and this application May 29, 1945, Serial No. 596,527
5 Claims. (Cl. 154—9)



1. In an apparatus for placing a strip of tread material around the traction periphery of a tire, a frame having a space therein for said tire in inflated condition, a roller element on the frame disposed transversely outside of the tire periphery, pressing means to exert force to the outside of the tire opposite from said roller element so as to lift said tire toward said roller and press said tire against said strip of tread material under said roller with sufficient force to flatten the portion of the traction surface of the tire at said roller to about the same width as the width of said strip of tread material, and side guides on the frame at the opposite sides of said tire slidably holding said tire at a constant angle to said roller.

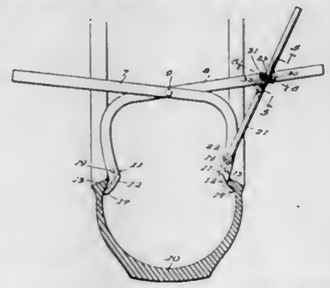
2,474,512
PULSATION ELIMINATION IN FLUID STREAMS
Ira C. Bechtold, Whittier, Foster M. Stephens, Los Angeles, and Charles Newman, Hollywood, Calif., assignors to The Fluor Corporation, Ltd., Los Angeles, Calif., a corporation of California
Application November 27, 1945, Serial No. 631,192
4 Claims. (Cl. 138—30)



1. Apparatus for eliminating pressure pulsations in a liquid stream having a continuous pulsating flow through a line, comprising a pair of vessels separately connected to said line at spaced locations therealong, a flexible bladder-like diaphragm within each of said vessels and displaceable by internal pressure against the wall thereof, means for maintaining gas under pressure at one side of said diaphragms so that the gas is compressed and expanded in response respectively to increases and decreases of the liquid pressure applied to the opposite sides of the diaphragms, and a tube forming an elongated restriction in said line coacting with the fluid displacement in said vessels to shift the phases of the pulsations at said locations.

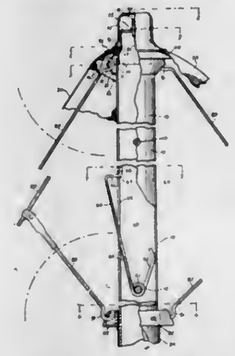
2,474,513
BRACKET ATTACHMENT FOR MOTOR VEHICLE WINDOWS
Paul H. Behrens, Alhambra, Calif.
Application January 17, 1948, Serial No. 2,903
4 Claims. (Cl. 224—42.45)

1. A bracket attachment for motor vehicle windows of the type embodying a vertically slidable glass pane and an upper frame member having a channel, and which attachment includes a yoke for positioning astride the upper marginal portion of the glass pane, and an upstanding ridge embodied in said yoke adapted to project into the channel of the upper rail of the window frame; a bracket element carried by said yoke projecting laterally therefrom, a tongue on said bracket element extending through said yoke at the base of said ridge arranged to extend over the upper edge of the pane, said tongue being fastened to said yoke, a U-shaped cushion internally of said yoke abutting said tongue, and a diagonal brace member formed on said yoke rigidly connected with said bracket element intermediate the ends thereof.



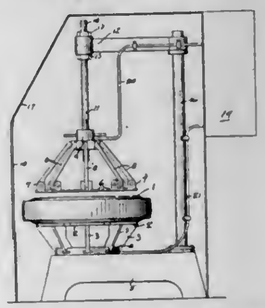
2,474,514
VEHICLE SUSPENSION
George E. Burks, Peoria, Ill., assignor to Caterpillar Tractor Co., San Leandro, Calif., a corporation of California
Application July 16, 1945, Serial No. 605,323
3 Claims. (Cl. 280—112)

1. In a track type tractor having a main frame and truck frames disposed at opposite sides thereof, a suspension structure comprising a rigid equalizer bar underlying the main frame and supported at its opposite ends on the truck frames, said equalizer bar having a bottom plate and vertically disposed spaced side plates, and a resilient support for the main frame comprising a T shaped seat member having a portion extending downwardly into the equalizer bar, and resilient means interposed between said portion and the side plates of the bar.



2,474,515
TIRE TOOL
William Jared Cox, Woodruff, Utah
Application November 26, 1946, Serial No. 712,321
3 Claims. (Cl. 254—50.1)

1. A tire casing spreader comprising two J-shaped levers having their curved inner ends in opposed relation to straddle the exterior of a tire casing and their straight rear ends crossed and pivotally connected, two flat rectangular heads rigidly joined at their centers to the free extremities of the curved inner ends of said levers respectively, said flat heads being disposed in planes substantially radial with respect to the pivotal connection of said levers, spaced outwardly curved claws rigidly joined to the outer longitudinal edges of each of said heads, a pair of laterally projecting studs on the curved inner ends of each of said levers adjacent the outer

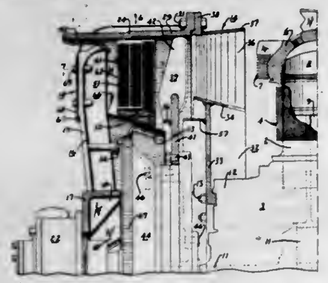


sides of said heads, two detachable casing-bead hooks for said levers respectively, each of said hooks comprising a flat metal plate bent to form two shank portions and of a width to enter the space between the claws on said heads, one shank portion carrying the hook to engage the inner side of a casing bead and the other shank portion to lie against the outer side of one of said heads, said other shank portion being notched to straddle one of said levers and having curved hooks to engage a pair of said studs, and means for securing said levers in an adjusted position.

2,474,516
TRACTOR UMBRELLA
Walter Daniel, Troy, Ohio, assignor to The Troy Sunshade Company, Troy, Ohio, a corporation of Ohio
Application February 26, 1945, Serial No. 579,770
8 Claims. (Cl. 135—20)

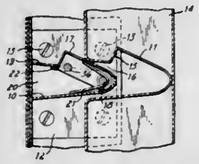
1. An umbrella comprising a hollow standard, a plug mounted within the upper end of said standard and leaving said upper end exposed to form a ledge, a ring shaped notcher mounted upon said standard and supported by said ledge, said notcher and said plug including means cooperating to hold the notcher in fixed relation thereto, a dished notcher plate mounted above the notcher and cooperating with said holding means to prevent displacement thereof, a cover having a central hole through which the standard projects, and a removable cap to clamp the cover against the notcher plate.

2,474,517
APPARATUS FOR HEATING TIRES
John L. Daum, Oakland, and Robert A. McCloud and Thomas P. Bacon, San Leandro, Calif.
Application April 17, 1946, Serial No. 662,696
1 Claim. (Cl. 18—18)



In an apparatus for electronically heating a tire carcass, a pair of capacitor plates connected to a high frequency electronic circuit, said plates being adapted to overlap the respective sides of the carcass of a tire therebetween, each of said plates being made of a plurality of segments circumferentially spaced and forming a substantially ring-like area opposite the adjacent sides of said carcass, a frame to support the sections of one of said plates, connecting elements extended from each of said sections to said frame and adjustably connected to the same for radially adjusting the position of each of said sections with respect to the center of the plate, said first plate and said elements being adapted to support a tire thereon, an adjustable frame for the other plate, a supporting element on said frame, a plurality of arms extended from said supporting element radially outwardly and toward said carcass, said sections being pivotally suspended on the ends of the respective arms, and means on said frame engageable with said supporting element and said arms to raise or lower said arms for radial adjustment of said segments of said plates.

2,474,518
INTERNAL-COMBUSTION ENGINE OIL COOLING MEANS
James M. Davies, Peoria, Ill., assignor to Caterpillar Tractor Co., San Leandro, Calif., a corporation of California
Application March 31, 1944, Serial No. 528,892
7 Claims. (Cl. 123—196)

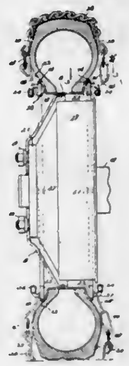


1. In a radial internal combustion engine, engine supporting means extending transversely with respect to the crankshaft axis of the engine and having spaced arms extending outwardly with reference to such axis and between which air may pass, a ring-like oil cooling radiator about

the axis, and means mounting the radiator on the supporting means including a plurality of

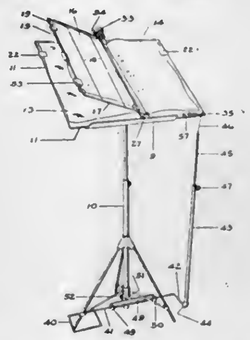
bracket plates secured to the radiator and to such arms.

2,474,519
LOCK FOR AUTOMOBILE DOORS
Joseph Drzewiecki, Algonac, Mich.
Application June 1, 1946, Serial No. 673,832
2 Claims. (Cl. 70—142)



1. A lock for automobiles as described comprising a socket in the body of the automobile, and elements in the door including a latch adapted to enter the socket and having a depressible member for interlocking with parts within the socket, a lateral bolt on said depressible member, a handle on the outer side of the door, a pivoted arm extending therefrom and adapted to depress the bolt, a spring-actuated dog comprising a vertically disposed, elongated member, pivoted midway its length and having at its upper end a shoulder normally projecting under the arm extending from the handle to prevent the arm from being depressed, a key-operated cam bearing against the lower end of the dog to impart to it a partly rotary motion upon its pivot to withdraw the upper part of said dog from under the arm extending from the handle, to permit depression by means of said arm of the bolt on said depressible member of the latch within the socket to disengage the latch therefrom.

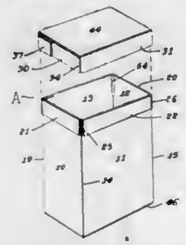
2,474,520
BRONZING MATERIALS
Cornelius S. Fleming, Los Angeles, Calif.
No Drawing. Application October 18, 1946, Serial No. 704,304
5 Claims. (Cl. 106—290)



2. A bronzing composition consisting essentially of: a bronzing powder; a vehicle; a leafing agent composed essentially of a fatty acid; a neutralizing agent from the group consisting of glycerine, diethylene glycol, polyethylene glycol and propylene glycol; and a blending agent from the group consisting of diamylphenol, meta cresol and meta para cresol.

2,474,521
TIRE CHAIN AND MOUNTING DEVICE THEREFOR
John G. Fogarty, Rochester, N. Y.
Application July 27, 1945, Serial No. 607,474
6 Claims. (Cl. 152—233)

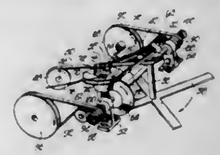
In a wheel having a rim adapted to receive a tire and provided with a surface facing toward the center of the wheel at least on one side of the rim, an element having members attached thereto adapted to receive anti-skid devices extending around the tire, said element being formed of separate parts, and means between said parts for expanding said element against said surface into holding relation therewith.



2,474,522
MUSIC SHEET TURNER
Charles Gaines, Vallejo, Calif.
Application August 26, 1946, Serial No. 693,023
1 Claim. (Cl. 84—501)

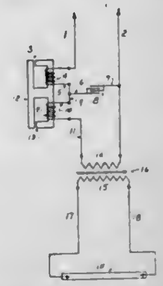
A device of the character described for supporting and turning a musical composition embodying a folded sheet and a center sheet, said device including in its construction a music stand, a back positioned at the upper portion thereof for retaining the folded sheet of music, a frame hinged to the said back at the central portion thereof for retaining the center sheet of music,

a clock spring secured to the said back and positioned above the same, said clock spring being capable of engaging the frame for turning the frame from one lateral side to the opposite lateral side of the back, a resiliently held hook shaped lever hingedly secured to the said back at the lower portion thereof for normally retaining the said frame on one lateral side of the said back, a foot pedal pivotally secured to the music stand, a crank arm leading from the foot pedal, a tubular member pivotally connected to the said crank arm and extending upwardly therefrom, a second tubular member telescopically positioned in the first mentioned tubular member, means adjustably securing the said tubular members together, and flexible means connecting the second mentioned tubular member to the said hook shaped lever, whereby the operating of the said lever for releasing and turning the frame is facilitated.



2,474,523
TRIPLE-EDGE RECLOSING CARTON
Reynolds Guyer, St. Paul, Minn., assignor to Waldorf Paper Products Company, St. Paul, Minn., a corporation of Minnesota
Application June 16, 1945, Serial No. 599,797
3 Claims. (Cl. 229—43)

2. A carton blank comprising a series of side wall panels and a glue flap connected along substantially parallel score lines, the glue flap projecting from one end of the blank, a series of flange panels connected to said side wall panels along a common line of fold at substantially right angles to said parallel score lines, the end of each of said parallel score lines adjacent said common line of fold being of magnified width, a series of cover edge panels foldably connected together and connected to said flange panels along a weakened line of separation, a glue flap foldably connected to one of said cover edge panels and projecting from the end of the blank opposite that from which the first named glue flap projects, and closure flap means foldably connected along a common line of fold to said cover edge panels and foldable to form a carton closure.

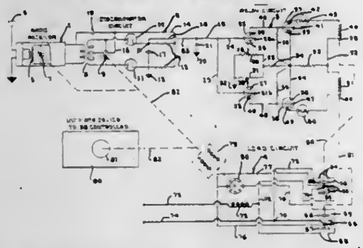


2,474,524
POWER LAWN MOWER
Paul W. Hainke, Hutchinson, Kans., assignor, by mesne assignments, to William H. Hainke
Application May 5, 1947, Serial No. 746,101
2 Claims. (Cl. 56—25.4)

1. A lawn mower of the character described comprising a platform; at least one pair of wheels supporting the platform; cutter mechanism having an upright spindle rotatably carried by the platform; a rotatable horizontal idler shaft; structure interconnecting the spindle and the shaft for driving the latter as the spindle is rotated; means operable upon rotation of said shaft for driving said wheels, said structure including a pair of bevel gears having connection with the shaft and the spindle respectively; means for yieldably holding said gears spaced apart; manu-

ally manipulable means for shifting one of said gears into engagement with the other gear; and a vertical stub shaft rotatably mounting said one gear, said shifting means and said yieldable means being operable to reciprocate said one gear longitudinally on the stub shaft.

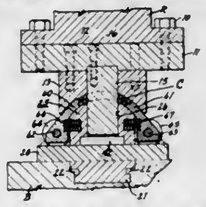
2,474,525
CONTROL FOR VAPOR DISCHARGE TUBES AND ELECTRIC ARCS
Eugene H. Haug, Glencoe, Ill., assignor, by direct and mesne assignments, to Modern Controls, Inc., Chicago, Ill., a corporation of Delaware
Application April 3, 1944, Serial No. 529,253
5 Claims. (Cl. 323—7)



1. In combination with a constant potential to constant current control device, a constant potential alternating current supply, a double reactor having two windows, a capacitor, a current transformer, and a load circuit, said double reactor having two coils mounted one each on the core of each window, and said double reactor having an air gap in the core of each of said windows, said capacitor being connected between the two coils of said double reactor and one side of said constant potential alternating current supply, the two air gaps being of different value, said current transformer having its primary connected to the output circuit of said constant potential to constant current transformation device and its secondary connected to said load circuit, said reactor having a tap arrangement so that the constant current in the load circuit may be set to any desired value, and said current transformer having its core so constructed that upon an open circuit in said load circuit the magnetic flux density is so limited that the voltage across the secondary of said current transformer is held to a safe value.

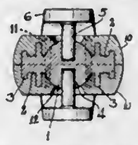
2,474,526
PICKLING OF STAINLESS STEELS
John J. Healy, Jr., Brookline, Maurice H. Taylor, Stoneham, and Furio A. Abbiati, Longmeadow, Mass., assignors to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Original application June 15, 1940, Serial No. 340,772, now Patent No. 2,408,424, dated October 1, 1946. Divided and this application August 14, 1946, Serial No. 690,600
2 Claims. (Cl. 252—142)

1. An aqueous acid reacting non-electrolytic pickling bath for stainless steels consisting essentially of water and active pickling agents consisting of a non-oxidizing mineral acid and ferric fluoride, said mineral acid being present in the bath in an amount varying between 0.7 and 25% and said fluoride being present in an amount varying between 0.5 and 20%, said bath being substantially free of nitric acid.



2,474,527
REMOTE-CONTROL SYSTEM
Donald A. Heisner, Lorain, Ohio, assignor to The Lorain County Radio Corporation, Lorain, Ohio, a corporation of Ohio
Application May 9, 1945, Serial No. 592,777
6 Claims. (Cl. 250—40)

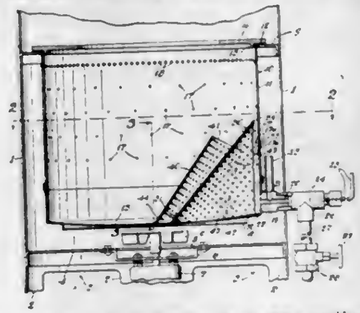
1. An electrical control system comprising a radio receiver, a frequency discriminating circuit connected thereto, a relay system including a pair of thermionic tubes A, B having input and output circuits, the respective output circuits containing individually operable electro-magnetic actuators, switching mechanism controlled by said actuators and a reversible load device operated in pre-determined directions by said mechanism, a pair of thermionic tubes C, D having grid and plate circuits, said grid circuits being connected in parallel to said discriminating circuit and said plate circuits being connected respectively to the input circuits of tubes A, B through biasing resistors whereby when potentials of different amounts appear across the grid circuits of tubes C, D, one of the tubes A, B will be rendered inoperative and the other operative to selectively cause the operation of the respective actuators and thereby control the operation of said load device.



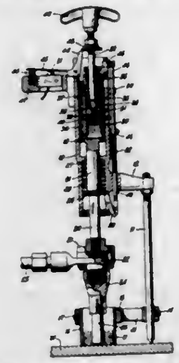
2,474,528
COIL SHAPING APPARATUS
Flavis E. Hook and Raymond O. Riggs, Anderson, Ind., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application September 6, 1947, Serial No. 772,554
3 Claims. (Cl. 153—3)

1. Apparatus for cylindrically shaping a flat coil comprising dies having concentric cylindrical surfaces between which the coil is formed, members between which the outer end edges of the coil are confined during formation one being movable away from the other to facilitate placing an unformed coil between them, members between which the outer side edges of the coil are confined during formation and normally out of confining position when the dies are separated, members around which the coil is placed before formation and normally separated from the inner end edges

of the coil, the closing of the dies causing the second mentioned members to confine the side portions of the coil between them and the third mentioned members, and means carried by one of the dies for wedging apart the third mentioned members so that the end portions of the coil are confined between them and the first mentioned members.



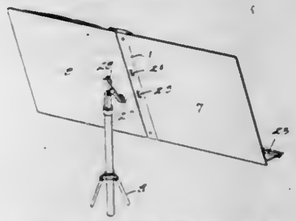
2,474,529
UNIVERSAL JOINT
John H. Hullinger, San Francisco, Calif.
Application August 7, 1948, Serial No. 43,070
5 Claims. (Cl. 64—17)



1. A universal joint comprising a substantially globular member having laterally disposed aligned extensions and a pair of axial sockets at its opposite sides, the sockets and the extension being at right angles to each other, a pair of opposed block portions secured together and having opposed grooves at their inner faces within which the globular member rotatably fits, and a bifurcated member having inwardly protruding pins rotatably extending into the sockets of globular member.

2,474,530
POT TYPE OIL BURNER AND PILOT MEANS THEREFOR
Milton D. Huston, Santa Fe, N. Mex., assignor, by mesne assignments, to Breese Burners, Inc., Santa Fe, N. Mex., a corporation of Delaware
Application August 20, 1945, Serial No. 611,563
1 Claim. (Cl. 158—91)

In a liquid fuel burner and pilot means therefor, a burner pot having a circumferential side wall, a closed end wall and an open end, said side wall having therein a plurality of air inlets spaced circumferentially thereabout and located at various distances from the ends of the pot, means for delivering a liquid fuel to the interior of the pot upon the end wall thereof at a controlled rate of flow, for vaporization upon the end wall of the pot, and a pilot housing located within the pot surrounding and above that part of the end wall of the pot upon which liquid fuel is discharged, the housing including a body portion the lower edge of which conforms to the end wall of the pot, the housing wall of which slants upwardly toward and engages and conforms to the inner face of the side wall of the pot, and an inclined additional baffle body partly surrounding and spaced from the lower portion of the pilot housing and defining, with the pilot housing, an upwardly expanding chamber extending upwardly from the end wall of the pot, such chamber being open upwardly toward the open end of the pot.



2,474,531
METHOD OF AND APPARATUS FOR ELECTRICALLY WELDING STUDS TO SURFACES
James M. Keir, Bronxville, and Edwin A. Clapp, Niagara Falls, N. Y., assignors to The Linde Air Products Company, a corporation of Ohio
Application April 7, 1944, Serial No. 529,930
11 Claims. (Cl. 219—4)

1. A method of welding a preformed metal stud or the like to a surface of a metal plate or the like, such method comprising initially holding said stud stationary and so as to space one end thereof from an area of said surface to which the stud is to be welded; enclosing said end of the stud, said area and the space between them with granular fusible mineral material; passing through a circuit including said end of said stud, said area and the adjoining mineral material an electric welding current of sufficient magnitude to fuse said end of said stud and the metal at said area and to melt such adjoining mineral material and form a liquid pool thereof around said fused end of said stud and such juxtaposed fused metal of said surface; and rapidly pushing said stud a sufficient distance toward said surface to thrust such fused end of said stud rapidly through such molten mineral material and into the fused metal upon said area, to coalesce the fused metal of such stud end and said area and to force fused metal outwardly around such stud end and form a reinforcing metal fillet around said stud end while forcing a covering layer of such molten mineral material upon such outwardly-forced fused metal to protect the latter from the atmosphere during the formation of said reinforcing fillet.

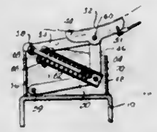
2,474,532
COMBINATION LOOSE-LEAF BINDER AND MUSIC STAND TABLE
Kenneth Kitchen, Fostoria, Ohio
Application August 7, 1946, Serial No. 688,937
3 Claims. (Cl. 45—121)

1. In a combined loose leaf binder and music stand table, a center section, a supporting strip secured to the front face of said center section, front and back covers hinged to the side edges of the supporting strip, and hinged folding ledges at the front faces and bottom of the front and back covers and forming shelves for additional music or material of temporary usefulness.

2,474,533
PREPARATION OF CUPROUS OXIDE
Lawrence C. Klein, Hubbell, Mich., assignor to Lake Chemical Company, Calumet, Mich., a corporation of Michigan
No Drawing. Application February 26, 1947, Serial No. 731,051
6 Claims. (Cl. 23—147)

1. In a process for producing cuprous oxide the steps of treating a mixture of cuprous oxide and cupric oxide containing at least one mol of Cu_2O for each mol of CuO with a low molecular weight, water soluble organic acid of the class consisting of formic, acetic, propionic, butyric, oxalic, tartaric and lactic acids in aqueous medium, the amount of acid being in excess of the theoretical required to react with the cupric oxide present by at least 20% and the amount of water being from 5 to 50 mols per mol of acid, anhydrous basis, until the cupric oxide has been dissolved and then separating the liquid portion of the reaction mixture from the Cu_2O which remains undissolved.

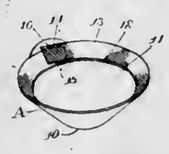
2,474,534
GROUNDING SHOE FOR WELDING MACHINES
Lloyd Hugh Knost, Webb City, Mo.
Application May 27, 1946, Serial No. 672,471
1 Claim. (Cl. 173—324)



Grounding apparatus for a welding machine comprising a pair of arms mounted adjacent one end thereof for swinging movement on spaced

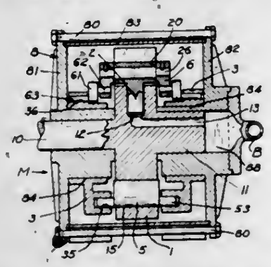
bers between which the outer end edges of the coil

is discharged, the housing including a body por-



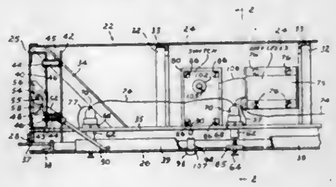
623 O. G.—74

axes; a link pivotally joining the arms near the opposite ends thereof; a grounding shoe formed from conducting material on one of the arms; means for electrically grounding said shoe; and elements for holding said shoe biased against work to be welded in said machine, said elements including a pair of relatively telescoped members



joined to the arms for swinging the same toward the work when the members are moved together toward a fully collapsed condition, and a spring between the members for yieldably holding the members in said condition, one of said members being pivotally joined to one arm at its swinging axis, the other member being joined to the other arm at its pivotal joinder with said link.

2,474,535
PROTECTIVE COT
Steven J. Krannak, St. Paul, Minn.
Application April 30, 1945, Serial No. 591,054
5 Claims. (Cl. 2—21)



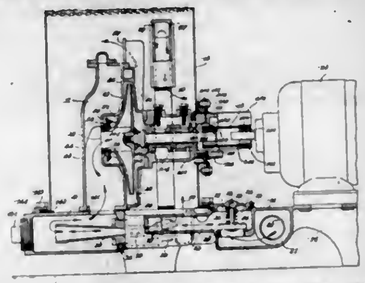
1. A protective cot comprising a concave body having flaring walls, a ring of pressure sensitive adhesive extending along the inner surface of the flaring walls adjacent the marginal edge thereof, a protective covering strip overlying said adhesive, and an unattached integral ear on said body projecting from the marginal edge thereof, said ear being free of the adhesive.

2,474,536
VARIABLE HYDRAULIC PUMP OR MOTOR
John E. Lundegard, Bremerton, Wash.
Application February 17, 1945, Serial No. 578,482
10 Claims. (Cl. 121—60)

1. A hydraulic power transmission unit or the like comprising a rotor having radial cylinders, pistons therein, a disk revoluble about an axis parallel to but disposed at a predetermined eccentricity from the rotor's axis, means interlocking the rotor and disk for conjoint revolution, each about its own axis, and articulated means interconnecting each piston with said disk, comprising a rocker arm pivoted between its ends upon the piston, and links connecting each end of the rocker arm with the disk.

2,474,537
POSITION INDICATOR FOR AIRCRAFT
James A. MacLeod, New York, N. Y., assignor to Sun Chemical Corporation, New York, N. Y., a corporation of Delaware
Application March 29, 1946, Serial No. 658,185
11 Claims. (Cl. 177—329)

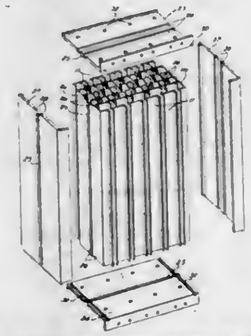
1. A device of the character described comprising, in combination, a supporting base, water-marking means, means normally securing said water-marking means in inoperative supported relation with said base means for disengaging said base and said water-marking means, and switch means effective to cause release of said securing means and including a housing defining a chamber provided with an open conduit leading from said chamber to the outside atmosphere, said switch responding to the presence of a predetermined volume of water in said chamber to cause the release of said securing means and thereby causing activation of said disengaging means.



2,474,538
ALLOYING MANGANESE WITH MAGNESIUM
Charles H. Mahoney and Gerald L. Lee, Boulder City, Nev., assignors, by mesne assignments, to the United States of America as represented by the Secretary of the Navy
No Drawing. Application June 10, 1944, Serial No. 539,786
2 Claims. (Cl. 75—168)

1. The improvement in permanently alloying manganese with magnesium which comprises introducing crushed metallic manganese into essentially aluminum-free molten magnesium at a temperature of from 750 to 800° C., the particle size of the manganese being in the range minus 4 mesh and plus 150 mesh.

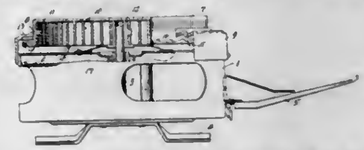
2,474,539
PUMPING APPARATUS
John Mann, Seneca Falls, N. Y., assignor to Gould Pumps, Inc., Seneca Falls, N. Y., a corporation of New York
Application February 25, 1944, Serial No. 523,927
35 Claims. (Cl. 103—5)



1. A pumping system comprising, in combination, a pump casing, an impeller mounted in said casing, means for rotating said impeller, a chamber in which said casing is mounted, said casing

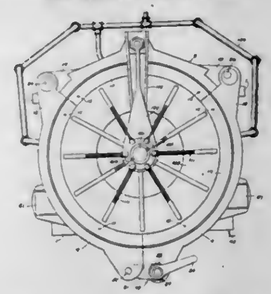
having at least one opening through which said impeller discharges liquid into said chamber, and

means for supplying air to said chamber without passing through said pump.



2,474,540
GAS SEPARATOR
Earle S. Marsh, Temple City, Calif., assignor to The Fluor Corporation, Ltd., Los Angeles, Calif., a corporation of California
Application February 9, 1946, Serial No. 646,664
3 Claims. (Cl. 183—110)

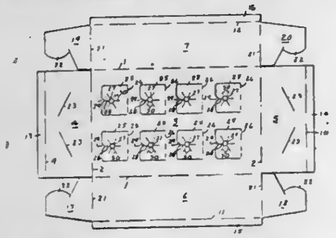
1. A gas separator comprising a plurality of individual vertically extending baffles nested in side by side relationship to present a pair of outer baffles with the others retained therebetween, a pair of spaced vertical side plates disposed adjacent and parallel to the outer of said baffles and engaging said outer baffles to thereby retain all of the baffles in side by side interfitting relation, a pair of spaced horizontal top and bottom plates for vertically retaining said baffles, spaced grooves in each of said top and bottom plates for the reception of the upper and lower extremities of said side plates to retain said side plates in their assembled positions, and projections on said baffles for maintaining them in horizontally spaced positions to permit passage of gas therebetween.



2,474,541
AUTOMATIC FISHING REEL
Alfred David Maury, Ilion, and Albert T. Lyon, Mohawk, N. Y.
Application October 2, 1946, Serial No. 700,750
4 Claims. (Cl. 242—84.3)

1. In an automatic fishing reel which includes a housing for attachment to the handle of a fish pole, a line spool, a rotatable spindle mounted in the housing on which the spool is mounted and with which it rotates, the housing including an annular portion concentric with the spindle and having an inwardly extending flange, a winding member in the form of a cap extending into the housing and having a rim flange opposed to the former flange, a coiled spring within the cap and

anchored at its outer end to the cap and at its inner end to a motion transmitting part on one end of the spindle, the two flanges being provided with means for permitting winding of the spring by the cap and holding the cap from retrograde motion, said flanges being disengageable by an inward axial movement of the cap, and a spring for forcing the cap outwardly to hold the flanges engaged.

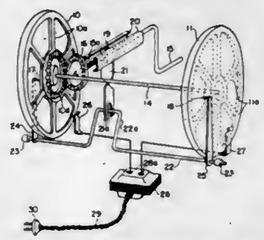


2,474,542
VULCANIZER MOLD
Robert A. McClond, San Lorenzo, and John L. Daum and Thomas P. Bacon, Oakland, Calif.
Application March 26, 1945, Serial No. 584,911
21 Claims. (Cl. 18—18)

13. In a tire vulcanizer of the character described, a stationary mold section, a movable mold section at each end of said stationary mold section, a hinge connection between each end of the stationary section and the adjacent end of each movable section, said hinge connection including a plurality of aligned cam elements having aligned holes therethrough off center with respect to the axis of the hinge, certain of said elements being fixedly connected to the movable section and the other elements being rotatably held on the hinge of the adjacent end of the stationary section, a crank shaft having its throw extended through said aligned holes, means to rotate said crank shaft for rotating said cam elements in the hinge of said stationary sections and to shift the hinged end of said movable section from an initial aligned position inwardly of the mold and then to an aligned position spaced from the stationary section and then outwardly of the mold from said last aligned position and back to the first aligned position during each revolution of said crank shaft, one of the elements connected to said crank shaft having diametrically opposite detents thereon, a releasable catch de-

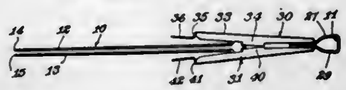
vice to automatically engage one of said detents when said movable mold section is in said initial position and the other detent when said movable mold section is in said spaced aligned position; and a control mechanism for releasing said catch mechanism and starting said rotating means and thereafter for stopping said rotating means when said catch device is automatically re-engaged with either of said detents after each half revolution of said crank shaft from said initial position, said control mechanism including a system of links connected to the catch devices at both movable section hinges and to an electric circuit control, said rotating means being controlled by said electric circuit control.

2,474,543
FLOWER HOLDER AND BOX
Roderick I. McLellan, Colma, Calif., assignor to E. W. McLellan Co., San Francisco, Calif., a corporation of California
Application April 2, 1948, Serial No. 18,605
5 Claims. (Cl. 206—45.14)



1. A flower holder comprising a box including a bottom wall formed with a plurality of apertured tabs partially stamped and integrally united therewith and projecting angularly upwardly therefrom for insertion of the stems of flowers through the apertures in said tabs for holding a flower on each tab, said tabs being separate and spaced from each other with at least one aperture to each tab and each tab being free for folding to a position coplanar with said bottom wall upon removal of the flower therefrom, said tabs being arranged in spaced relationship and inclined whereby the stems of the flowers adapted to be supported by said tabs will extend slantingly into engagement with the said bottom wall behind the opening left by said tab.

2,474,544
FUSED CAST ALUMINA REFRACTORY
John Charles McMullen, Niagara Falls, N. Y., assignor to The Carborundum Company, Niagara Falls, N. Y., a corporation of Delaware
No Drawing. Application August 10, 1946, Serial No. 689,825
11 Claims. (Cl. 106—63)

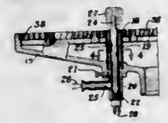


3. A fused cast alumina refractory article containing, in addition to crystalline alumina, minor amounts of an alkali oxide, an alkaline earth oxide selected from the group consisting of calcium oxide, barium oxide and strontium oxide, and an acid oxide selected from the group consisting of silica and titania, the combined percentage of alkali oxide, alkaline earth oxide and acid oxide being 4% to 7% by weight of the mass with the acid oxide from an effective amount up to 2% by weight of the mass, and the alkaline earth oxide from 0.1% to .4% by weight of the mass, the remainder of said article being substantially entirely crystalline alumina, said article having a dense, finely crystalline structure.

2,474,545
GRAPHIC FACSIMILE TOY
David W. Moore, Jr., New York, N. Y.
Application August 3, 1946, Serial No. 688,380
2 Claims. (Cl. 178—6.6)

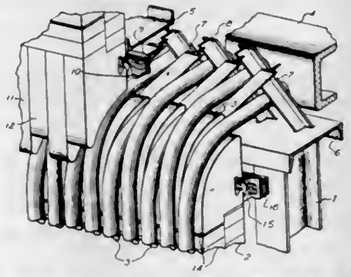
1. A graphic toy for transferring an image from an electrographic master record to an electrosensitive record blank comprising, a first rotatable support for a master record, a second rotatable support for a record blank, a common shaft for supporting and driving said supports, a pivoted shaft having an actuating ball, a pair of scanning devices mounted on said shaft and individually movable across said supports, a manually rotatable driving means, a driving connection between said driving means and said supporting shaft, said driving means including a lead screw and follower, a driving connection between said follower and said ball, and an electrical circuit directly interconnecting said scanning devices and including supply circuit connections.

2,474,546
ABRASIVE STRIP HOLDER
Alvin O. Olafson, St. Paul, Minn.
Application March 26, 1947, Serial No. 737,243
12 Claims. (Cl. 51—187)



1. A holder for flexible strip material comprising an elongated support, a pair of opposed clamping members slidably supported on said support, said clamping members being hingedly supported for movement into or out of clamping position on opposite sides of said support, and wedge means on said elongated support engageable with said clamping members upon longitudinal movement thereof for hinging said clamping members into clamping position.

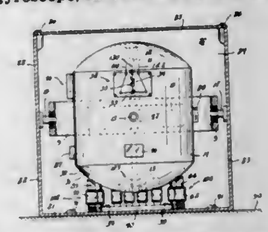
2,474,547
GAS BURNER AND PILOT
Paul J. Patch, Denver, Colo., assignor to The Rocky Mountain Gas Equipment Company, Denver, Colo., a corporation of Colorado
Application September 7, 1945, Serial No. 614,888
4 Claims. (Cl. 158—115)



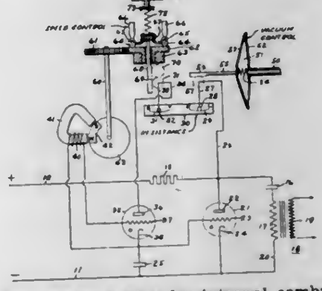
1. A gas burner, comprising, a hollow body having a top wall and a bottom wall, provided with axially aligned openings, the opening in

the top wall being the larger, a tube having its lower end positioned in the opening in the bottom wall and its upper end in the opening in the top wall, an annular gas distributing nozzle surrounding the upper end of the tube, a tubular member forming part of a thermo-responsive device, positioned in the tube a seal between the lower end of the tube and said tubular member,

the outside diameter of the tubular member being less than the inside diameter of the tube whereby an annular passageway for combustible fuel is formed, means for introducing a combustible gaseous mixture into the annular space which, when ignited, forms a tubular flame, and a thermal device at the upper end of the tubular member.



2,474,548
WALL BOX FOR WATER TUBE BOILERS
George P. Reintjes, Kansas City, Mo.
Application November 23, 1946, Serial No. 711,876
1 Claim. (Cl. 122—6)



In a water tube boiler, the combination with an upright support, a horizontal beam carried by said support and comprising a pair of vertically spaced members connected by two sets of oppositely inclined spaced diagonals to provide tube-receiving openings, a plurality of water tubes spaced from the upright and having their upper ends curved horizontally, the horizontal portion of alternate tubes passing through the openings at different levels, tile supports respectively carried by the upright and the beam, and tile carried by said tile supports in coacting pairs to embrace the upper and lower faces of the curved portion of each water tube.

2,474,549
GYROSCOPE
John F. Schoeppel, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application April 19, 1945, Serial No. 589,130
6 Claims. (Cl. 74—5.47)

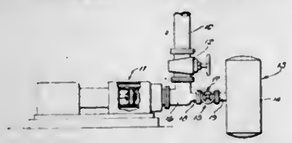
1. In a device of the class described, in combination, a gyroscope having a spin axis, means mounting said gyroscope for rotative movement about a pair of mutually perpendicular gimbal axes normally perpendicular to said spin axis, means applying to said gyroscope a pair of forces which in the normal position of the gyroscope provide a turning couple about an axis passing through the intersection of said gimbal axes and axially spaced therefrom, and means effective to vary the magnitude of said forces, whereby to precessively exert a torque about a gimbal axis of said gyroscope, said second named means comprising a torque motor having a pair of exciting windings and a magnetically reactive member arranged for relative rotative movement, said last named means comprising means for differentially energizing said exciting windings of said torque motor.

2,474,550
IGNITION SYSTEM
Brooks H. Short and Herman L. Hartzell, Anderson, Ind., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application September 19, 1947, Serial No. 774,908
6 Claims. (Cl. 123—148)

5. Ignition apparatus for internal combustion engines comprising an ignition coil, a current source, a main condenser charged thereby, a thyratron for withholding discharge of the main condenser to the coil until the desired instant of ignition, an auxiliary condenser connected with the grid of the thyratron to cause the thyratron to become conducting when the auxiliary condenser attains a potential sufficient for discharge to said grid, a circuit for connecting the auxiliary condenser with the current source and including a second thyratron and a variable resistance, a magneto generator operated by the engine and having a coil connected with the grid of the second thyratron to render said thyratron conducting whereby the charging of the auxiliary condenser begins at a certain instant in the operation of the engine, and means responsive to engine operating conditions for controlling the variable resistance in order to vary the duration of potential increase at the auxiliary condenser to a value sufficient to cause the first thyratron to become conducting.

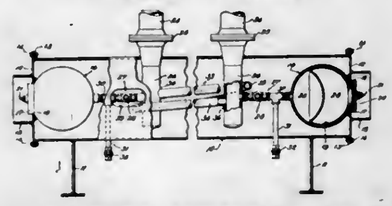
of said felt sole, joining together said border por-

2,474,551
CURTAIN AND DRAPE ROD SUPPORT ATTACHMENT
Marvin A. Smith, Portland, Oreg.
Application April 7, 1948, Serial No. 19,523
2 Claims. (Cl. 248—263)



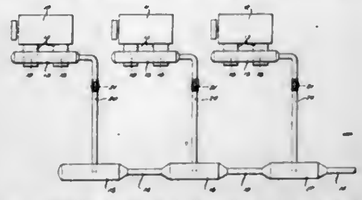
2. A curtain or drape rod support comprising in combination a pair of plates, a Venetian blind header attached to and supported by said plates, a bracket adjustably secured to each of said plates, each of said brackets having a rear wall, two parallel side walls, two spaced apart front walls, parallel vertical extensions formed integral with said end walls, and clips adjustably attached to the upper and lower ends of said bracket for securing the bracket to said plates.

2,474,552
SECTIONAL HINGED FOLD HOLDER
Frederick W. Steinmeyer, Oakland, Calif.
Application July 31, 1945, Serial No. 608,069
7 Claims. (Cl. 160—348)



3. The combination with a traverse rod and a traverse curtain supported by the rod and being movable from open to closed position, the curtain having folds formed therein at its top and having a hem at its bottom, of a sectional hinged fold holder placed in the hem and comprising a plurality of sections jointed together, the ends of each section being curved slightly in opposite directions, the length of the sections determining the width and the shape of the folds at the bottom of the curtain and causing these to match the folds at the top to thus establish a succession of flutes full length of said curtain from top to bottom.

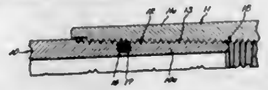
2,474,553
ELIMINATION OF PULSATIONS IN GAS LINES
Foster M. Stephens, Los Angeles, Calif., assignor to The Fluor Corporation, Ltd., Los Angeles, Calif., a corporation of California
Application March 19, 1946, Serial No. 655,409
5 Claims. (Cl. 230—236)



3. In combination with a gas compressor, apparatus for the removal of pulsations in a gas stream having pulsating flow created by the compressor, comprising a line pipe connected with the compressor and conducting the pulsating gas stream, and a closed chamber having a restricted communication with said stream and forming with said communication an acoustical filter having a resonant frequency corresponding to the frequency of the dominating pulsations in said gas stream.

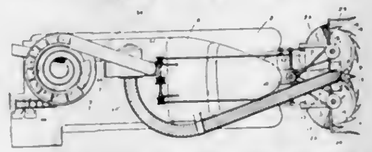
2,474,554
APPARATUS FOR PULSATION ELIMINATION IN FLUID STREAMS
Foster M. Stephens, Los Angeles, and Cecil F. Yates, North Hollywood, Calif., assignors to The Fluor Corporation, Ltd., Los Angeles, Calif., a corporation of California
Application August 5, 1946, Serial No. 688,552
11 Claims. (Cl. 138—30)

1. Apparatus for eliminating pulsations in a liquid stream flowing continuously through a line, comprising a housing, a pair of vessels contained in said housing, means connecting said vessels with said line at spaced locations therealong, said vessels containing gas which compresses and expands in response to increasing and decreasing pressures transmitted through the liquid from said line, and means providing a restriction in said line between said locations.



2,474,555
GAS LINE PULSATION DAMPENING SYSTEM
Foster M. Stephens, Los Angeles, Calif., assignor to The Fluor Corporation, Ltd., Los Angeles, Calif., a corporation of California
Application September 13, 1946, Serial No. 696,782
5 Claims. (Cl. 230—236)

1. In combination with a plurality of gas compressors, a gas manifold line consisting of a succession of enlarged chambers, adjacent chambers being interconnected by a smaller cross-sectional area passage, and pipes connecting each chamber with one each of the compressors so that the gas is caused by the compressor displacements to flow through said manifold line from one into a next of said chambers and the gas flow is regularized by virtue of the chamber and interconnecting passage series.

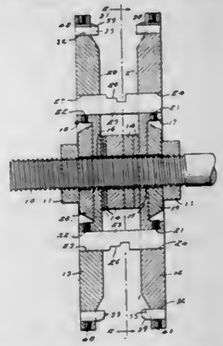


2,474,556
PIPE JOINT SEAL
Albert L. Stone, Palos Verdes Estates, Calif.
Application November 23, 1945, Serial No. 630,196
2 Claims. (Cl. 285—154)

1. A threaded pipe joint comprising inner and outer sections having inter-engaging threads and spiral fluid-containing clearance spaces beyond the crests of the threads that form fluid-passing channels containing a flowable sealing substance, and a body of deformable material contained within a recess in a portion only of the annular threaded area of one of the sections and having its inner face in sealing engagement with opposed threads and channels on the other

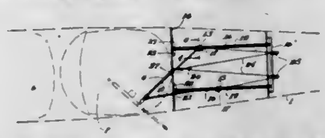
section, said deformable material forming a dam across said channels so as to seal the joint against fluid leakage therethrough and to crowd said flowable sealing substance forward in said spaces as the sections are screwed together, the crowded flowable sealing substance between the deformable member and the inner end of the joint co-acting with the deformable member to prevent fluid leakage out through the joint.

2,474,557
COMBINE HARVESTER
Fred H. Templeton, Portland, Oreg., assignor to Templeton Harvester, Inc., Oakland, Calif., a corporation of California
Application June 2, 1944, Serial No. 538,398
7 Claims. (Cl. 56—122)



1. A harvesting and threshing machine for grain having in combination therewith, a grain cutter comprising a disc mounted for revolution in a horizontal plane, horizontally extending cutting teeth on the perimeter of said disc, a plurality of upstanding vanes, each vane being made rigid with a cutting tooth and having an upstanding leading end positioned immediately beyond the end of the tooth with which it is made rigid, conterminous with the extreme cutting part of such tooth, and a trailing end curved backwards from said leading end to constitute an air moving device when the disc is revolved.

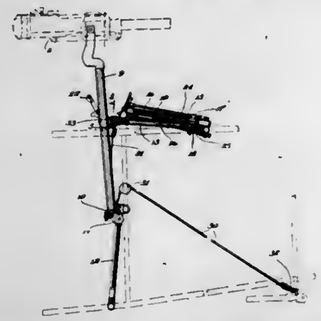
2,474,558
MANUFACTURE OF TURNED SLIPPERS OR SIMILAR FOOTGEAR
Karl Erik Tholson, Akarp, Sweden
Application February 14, 1947, Serial No. 728,596
In Sweden February 21, 1946
5 Claims. (Cl. 12—142)



1. A method of making light footgear such as slippers, comprising providing a felt sole having a strip fastened on the edge thereof so as to present a border portion projecting beyond the edge of said felt sole, joining together said border portion and edge portions of an outer sole, an upper and a lining for said upper in reversed condition, and turning the upper right side out.

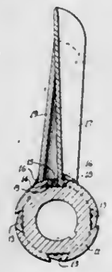
2,474,559
CIRCULAR BURNISHER PLANER AND MOLDING HEAD
Charles A. Walters, Portsmouth, Ohio
Application May 28, 1945, Serial No. 596,123
2 Claims. (Cl. 144—218)

1. In a burnisher planer and moulding head of the character disclosed, the combination of a mandrel, a pair of cutter disks disposed in spaced relation on said mandrel and secured thereto for rotation therewith, each of said cutter disks having a plurality of transverse openings of triangular cross-section disposed circumferentially thereof, a plurality of triangularly shaped cutter elements disposed slidably within said openings respectively, each of said cutter elements having a plurality of cutter edges adapted to be projected within the region between the disks, each of said cutter disks having a plurality of non-circular openings disposed circumferentially and transversely thereof, said non-circular openings being located radially inwardly of said triangular openings and the openings in one disk being axially aligned with those in the other, and a plurality of non-circular moulding bits disposed within said non-circular openings and extended between said pair of disks, said moulding bits being individually removable and adjustable relatively to the disks.



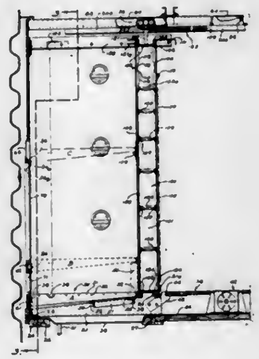
2,474,560
FLEXIBLE GUN MOUNT FOR AIRCRAFT
Michael Watter, Hartford, Conn., assignor to United Aircraft Manufacturing Corporation, a corporation of Delaware
Application October 18, 1930, Serial No. 489,537
20 Claims. (Cl. 89—37.5)

1. A flexible gun mount for aircraft comprising a gun standard mounted for universal movements, a pair of guide members having one end



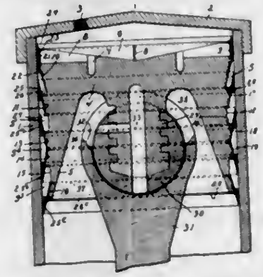
of each disposed adjacent the standard, a pair of retaining arms pivotally connected each at one end with said standard and slidably connected at their other ends with said guide members and means for locking the said other ends of the retaining arms at any desired positions along said guide members.

2,474,561
FLEXIBLE GUN MOUNT FOR AIRCRAFT
Michael Watter, New York, N. Y., and Herbert W. Doherty, East Hartford, Conn., assignors to United Aircraft Manufacturing Corporation, a corporation of Delaware
Application November 13, 1931, Serial No. 574,690
8 Claims. (Cl. 89—37.5)



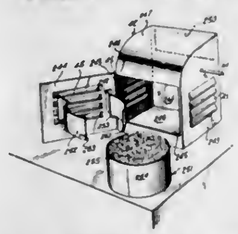
1. In aircraft a main body having a gunner's compartment and a gun mounted therein for universal adjustment, the gun mount including a guide member in the lower part of the compartment, a slide member adjustably mounted on said guide, a standard projecting downwardly into the compartment and pivotally mounted at its lower end on said slide member and adjustable bracing mechanism disposed within the stream-lines of the main body and connected with said standard.

2,474,562
PROPELLER
William Waterval, Brooklyn, N. Y.
Application March 30, 1945, Serial No. 585,657
1 Claim. (Cl. 170—159)



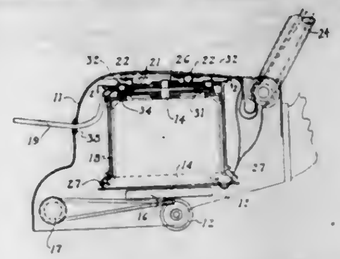
The combination of a propeller blade with a recessed hub portion, said propeller blade comprising a major blade having its bottom portion enlarged and slantingly bent, said hub portion being formed with grooves therein, the enlarged portion of the major blade being mounted against one side of one of said grooves, a wedge arranged against the opposite side of said groove, and a locking member disposed between the wedge and said blade, whereby to secure the latter solidly in position, said wedge, locking member and blade being welded solidly together to form a unit, a second blade, slightly bevelled to form a streamlined surface, being welded to the major blade, said major blade and second blade being welded to the hub portion proper, substantially as shown and described.

2,474,563
CONVERTIBLE ICE BUNKER
Herbert J. Wieden, Los Angeles, Peter C. Traphagen, Pasadena, and Eliot F. Stoner, Los Angeles, Calif., assignors, by mesne assignments, to General American-Duryea Corporation, Chicago, Ill., a corporation of Delaware
Application July 22, 1946, Serial No. 685,510
21 Claims. (Cl. 62—19)



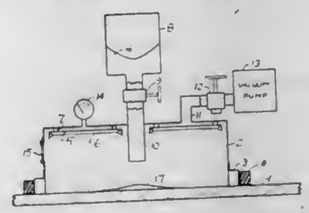
1. In a refrigerator car structure, or the like which has a floor, roof and side and end walls, a movable transverse bulkhead, and means for securing the bulkhead in a transverse plane spaced from the end wall in a bunker forming position dividing the car interior into a load compartment and an ice bunker between that compartment and the end wall; the combination of means supporting the bulkhead in the car structure for movement longitudinally between the end wall and the bunker forming position and for longitudinal movement from the bunker forming position into the load compartment, said supporting means incorporating a pivotal mounting for the bulkhead whereby the bulkhead may be swung from a position in a transverse plane into a position out of that plane to afford access to the ice bunker from the load compartment, an ice grate, means for securing one edge of the ice grate on the car end wall, means for supporting the opposite edge of the ice grate on the bulkhead when the latter is in its bunker forming position, and means for locking the bulkhead to the last mentioned supported edge of the ice grate to prevent movement of the bulkhead into the load compartment.

2,474,564
PISTON FOR HIGH-COMPRESSION ENGINES
Stanley Martin Zoromskis, Kenosha, Wis.
Application August 20, 1947, Serial No. 769,686
10 Claims. (Cl. 309—14)



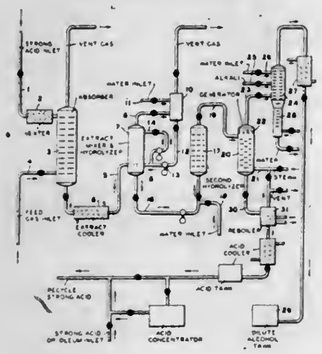
1. A piston having a plurality of slippers secured to its outer wall, the slippers below the topmost one each comprising a ring whose cross sectional form is that of a V, one leg of which is longer than the other, the longer leg having means for securing the slipper to the piston, the outer surface of the shorter leg constituting a cylinder contacting surface.

2,474,565
VAPORIZER
Furman S. Abbott, Montclair, N. J., assignor to Airkem, Inc., New York, N. Y., a corporation of New York
Application November 13, 1946, Serial No. 709,449
3 Claims. (Cl. 261—98)



1. A vaporizer comprising, in combination, a hollow casing, partition means dividing said casing into upper and lower compartments and having an aperture therein for passage of gaseous medium, said casing having inlet and outlet openings for passage of gaseous medium with one communicating with the upper compartment and the other communicating with the lower compartment and an access opening in one side of said casing leading to the lower compartment, door means to close the access opening, support means mounted on the inside of said door means, a porous mass of material having tortuous passages extending therethrough defined by surfaces of extended area, means removably to support said mass on said support means beneath and substantially extending across the aperture in said partition means, conduit means to convey liquid under pressure to within the upper compartment, and spraying means connected to said conduit means and mounted in the upper compartment above the aperture to spray liquid down on said mass.

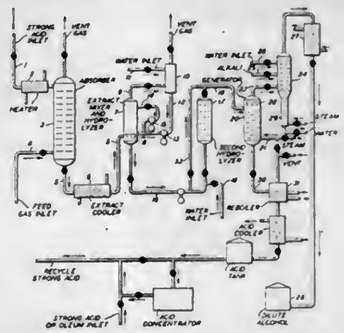
2,474,566
TAKE-UP OF ELECTRIC CORDS
Earl Applegate, Frankfort, Ind.
Application November 12, 1946, Serial No. 709,324
8 Claims. (Cl. 242—77)



1. A portable electric device (including a portable housing and an electric motor with a shaft carried by the housing), and cord winding apparatus including a reel rotatably carried by the motor with its axis extending in axial alignment with the motor shaft, a drive device including driven and drive elements, respectively, associated with the reel and motor for transmitting drive from the motor to the reel, said drive device being of a type which while driving the reel permits a substantially non-rubbing type of slippage between the motor and the reel, and the drive element being driven at full motor speed and the driven element being slip-driven thereby with such non-rubbing slippage that while its speed is a small fraction of the speed of the drive elements, the torque developed is not more than slightly in excess of enough to barely wind the cord while loose.

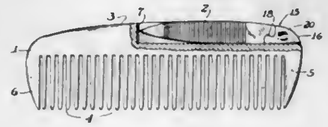
2,474,567
VACUUM APPARATUS FOR IMPREGNATING FLOORS
Lindsay M. Applegate, Portland, Oreg.
Application February 10, 1947, Serial No. 727,534
5 Claims. (Cl. 91—18)

2. In means for impregnating floors, the combination of an open-bottomed chamber evacuating means, means for admitting and depositing impregnating compound on said floor, and a seal around the edge of said chamber, said seal comprising the edge of the chamber in contact with the floor, a rigid ring attached to said chamber the edge of said ring being substantially coplanar with the edge of said chamber, and spaced therefrom and an external ring of yielding material attached to the outer side of said rigid ring for close sealing to said floor.



2,474,568
DILUTION AND HYDROLYSIS OF DIETHYL SULFATE SOLUTIONS
Lewis A. Bannon, Baton Rouge, La., and Charles E. Morrell, Westfield, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
Application June 11, 1946, Serial No. 676,078
9 Claims. (Cl. 260—639)

1. An improved process for the preparation of ethyl alcohol from a solution of diethyl sulfate in strong sulfuric acid, comprising diluting said solution with water to a 40–55 weight percent (hydrocarbon-free basis) sulfuric acid concentration and hydrolyzing the major portion, but not all, of said diethyl sulfate in a first hydrolysis zone maintained at a temperature of 80–90° C., withdrawing a stream of the resulting partly hydrolyzed solution from said first hydrolysis zone and passing it through a second hydrolysis zone maintained at a temperature between 80 and 95° C., providing sufficient residence time in said second zone for substantially complete hydrolysis of remaining diethyl sulfate, then stripping alcohol from the stream leaving said second zone by contact with steam.

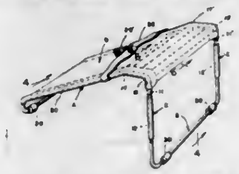


2,474,569
DILUTION AND HYDROLYSIS OF DIETHYL SULFATE SOLUTIONS
Lewis A. Bannon, Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware
Application June 11, 1946, Serial No. 676,079
8 Claims. (Cl. 260—639)

1. An improved continuous process for the hydrolysis of a solution of diethyl sulfate in strong sulfuric acid which, on dilution with water, will form a separate diethyl sulfate phase, comprising passing a stream of said solution into a hydrolysis zone containing partly hydrolyzed solution having sufficient ethyl alcohol to prevent formation of a separate phase of the added diethyl sulfate, separately adding water to said zone to maintain therein 40–55 weight per cent (hydrocarbon-free basis) sulfuric acid, maintaining said zone at a suitable hydrolysis temperature with mixing to provide a substantially uniform composition throughout said zone, providing sufficient residence time in said zone to hydrolyze at least the major portion of said added diethyl sulfate, withdrawing a stream of

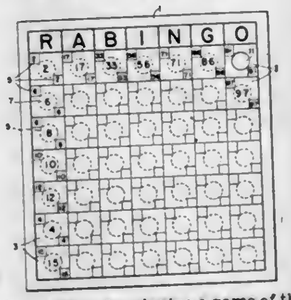
the hydrolyzed solution from said zone and separating ethyl alcohol therefrom.

2,474,570
COMBINATION COMB AND FILE
Emile V. Boudreaux, Los Angeles, Calif.
Application March 24, 1945, Serial No. 584,602
2 Claims. (Cl. 132—76.4)



1. In a device of the character disclosed, a first member provided with an elongated outwardly opening groove, and formed with a cut-away portion adjacent one end of said member to provide two undercut extensions adjoining said groove; an element to be received in said groove and formed with a part adapted to fill said cut-away portion to form a continuation of the first member, said part provided with spaced notches adapted to have snap engagement with said undercut extensions for holding said part to said first member.

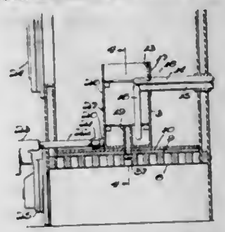
2,474,571
LOW-TEMPERATURE POLYMERIZATION PROCESS
Paul W. Brakeley, Jr., Plainfield, and David W. Young, Roselle, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application March 28, 1946, Serial No. 657,906
5 Claims. (Cl. 260—85.3)



1. A polymerization process for isobutylene comprising the steps of cooling isobutylene to a temperature within the range between —40° C. and —103° C., adding thereto a Friedel-Crafts polymerization catalyst and thereafter chemically destroying the catalyst activity during the peak of the polymerization reaction and within 5 seconds of the initiation of reaction.

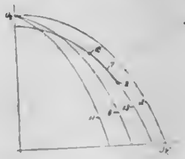
2,474,572
CHILD'S SHAMPOO BOARD
Horace B. Brose and Lazetta D. Brose, Chicago, Ill.
Application August 27, 1948, Serial No. 46,544
2 Claims. (Cl. 4—159)

1. In a device of the class described, a substantially U-shaped frame having downturned ends, a fabric covering secured to the sides of the frame, a supporting frame with turned up ends, and two upright tubular couplings adapted to supportingly engage the downturned ends of the U-shaped frame, each coupling having a shoulder in one end portion adapted to be supportingly engaged by the upturned ends of the supporting frame.



2,474,573
GAME BOARD OF THE LOTTO TYPE
Abe Henry Cohen, Pittsburgh, Pa.
Application April 21, 1947, Serial No. 742,907
1 Claim. (Cl. 273—135)

Game apparatus for playing a game of the Lotto type comprising a card of the Lotto type, the area of one surface of which has impressed thereon an array of small areas arranged in columns and rows each of said small areas having a portion enclosed by a perforated contour of such dimension that said portion may be removed by a thrust of a finger which breaks the solid portions of said contour, each said small area also having a number impressed in a region thereof external to said contour.

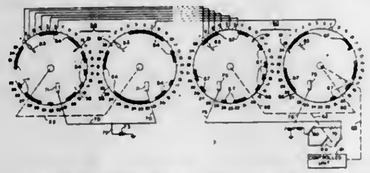


2,474,574
OIL HEATER FOR HOT-WATER FURNACES
James E. Craddock, Richmond, Va.
Application October 7, 1946, Serial No. 701,813
2 Claims. (Cl. 126—93)

1. A coal furnace heater including a casing open at the top and composed of vertical front, rear and side walls and provided with a horizontal bottom adapted to be supported upon the grate of a coal furnace, the rear wall being provided with a vertical slot extending downwardly from the upper edge of said rear wall and terminating short of the bottom of the casing and arranged to receive the pipes of a water heating coil, a vertical closure plate fitted against the rear wall of the casing and provided with a vertical slot extending upwardly from the lower edge of the closure plate and arranged to permit the same to straddle said pipes and close the vertical slot of said rear wall above said pipes, upper and lower baffles removably supported within the

casing and having openings of a size to receive said coils and provided with slots aligned with the slot of the rear wall of said casing and of a size to clear said pipes in assembling and installing the heater, a fluid fuel inlet at one of the walls of the casing adjacent the bottom thereof, and an air inlet tube extending upwardly from the bottom of the casing and having its upper end located at an elevation above that of the fuel inlet.

2,474,575
HEATING DEVICE FOR HOT CATHODE TUBES
Marcel Georges Favre, Wettingen, Switzerland, assignor to "Patelhold" Patentverwertungs- & Elektro-Holding A.-G., Glarus, Switzerland
Application November 8, 1945, Serial No. 627,482
In Switzerland February 27, 1943
3 Claims. (Cl. 315—106)



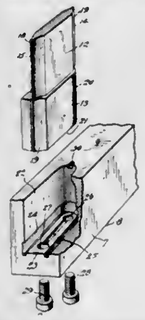
1. The combination with a tube having a hot cathode cooperating with a grid and an anode, said hot cathode comprising a filament; of a source of cathode-heating current, and regulating means automatically varying the voltage impressed by said source across said filament to maintain the electronic emission current of said cathode constant and independent of variations in the anode space current; said regulating means comprising a transformer having a secondary winding connected across said filament and a primary winding connected to said current source, means for adjusting the magnetic leakage flux of said transformer to impart to the secondary winding a voltage-current relation over a resistance range which has substantially the curvature of the voltage-current characteristic for a constant electronic emission current from said filament as its resistance increases during use of the tube, and means for adjusting the voltage imposed by said source upon said transformer primary winding to that constant value at which

condition which varies in accordance with an

2,474,582
GAS TURBINE PLANT

the voltage impressed across said filament varies with the resistance thereof to maintain the electronic emission current constant.

2,474,576
MASTER-SLAVE SYSTEM
Nicholas V. Fedotoff, Lynbrook, N. Y., assignor to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application December 31, 1946, Serial No. 719,410
13 Claims. (Cl. 318—33)

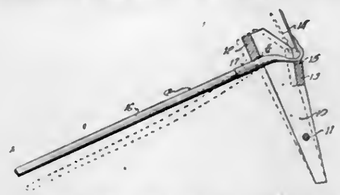


1. A master-slave system comprising: a master switch and a slave switch each having approximately M different switch positions and each including N contacts where N is a number greater than four but substantially less than M; and connections between corresponding ones of said contacts; said master switch and said slave switch being constructed with reference to each other and in accordance with the relation

$$M=\frac{N(N-1)(N-2)\ \ldots\ (N-P+1)}{P!}$$

wherein P is a number which does not exceed one-half the number N, to establish (a) operative relations between said switches through a maximum of P of said connections, (b) to establish operative relations between said switches through at least one of said N connections for any relative position of said switches with the exception of only those relative switch positions at which correspondence is attained, and (c) to establish inoperative relations between said switches through said connections for those relative positions at which correspondence is attained.

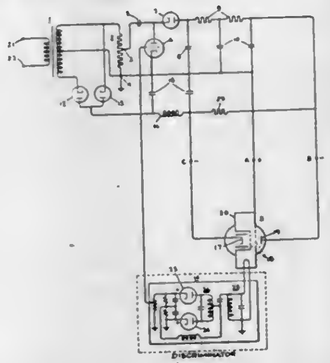
2,474,577
TRY SQUARE
Charles E. Gancer, Oak Park, Ill.
Application February 15, 1946, Serial No. 647,833
4 Claims. (Cl. 33—112)



4. A precision square comprising a stock having opposed parallel working faces and provided with a recess at one end, the bottom of said recess being accurately ground to a condition of parallelism with said opposed faces; a bevel-edged blade having an enlarged head, the end of said head being accurately ground at a 90 degree angle to the edges of said blade and provided with a threaded screw-receiving opening; said stock having a screw-passing opening extending from the outer face thereof and terminating at the bottom of said recess; said head lying within said recess with its end in contact with the bottom of said recess; and a screw, passing through the opening in said stock and engaging the threaded opening in said head, whereby to secure the blade and stock in assembled relation.

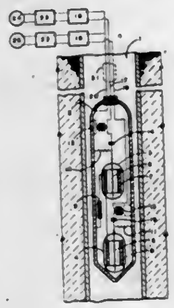
2,474,578
CHLORINATED METHYLCHLOROSILANES AND THEIR HYDROLYSIS PRODUCTS
William F. Gilliam, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Application May 5, 1945, Serial No. 592,289
8 Claims. (Cl. 260—448.2)

1. Methyldichloromethyldichlorosilane.



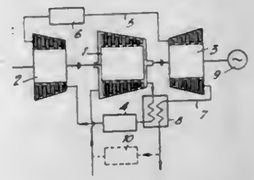
2,474,579
HOE STAND
John F. Hendrix, Munday, Tex.
Application May 3, 1948, Serial No. 667,033
3 Claims. (Cl. 51—216)

1. A hoe sharpening stand including an A-frame, a hoe blade retaining member fixedly disposed transversely on one side of said frame in spaced relation to the apex thereof and provided with a gullet to receive the handle of said hoe blade, the end of said handle being adapted to engage the ground in spaced relation to said stand in support thereof, a second transverse member on the opposite side of said stand and above said first member adapted to exert a downward thrust on said hoe handle in tilted position of said frame to clamp said hoe in said frame.



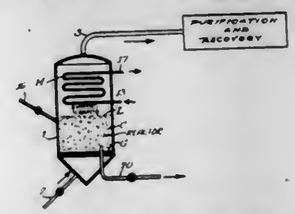
2,474,580
VOLTAGE REGULATING SYSTEM
Michael E. Hiehle, Syracuse, N. Y., assignor to General Electric Company, a corporation of New York
Application May 23, 1946, Serial No. 671,677
6 Claims. (Cl. 250—36)

1. A regulating circuit comprising in combination, a source of alternating electromotive force, a first condenser and a first rectifier connected in series relation across said source, a second rectifier and a second condenser connected in series relation across said first rectifier, one of said rectifiers including a control electrode, said second rectifier being disposed to conduct current from the point of connection of said rectifiers in a direction opposite to said first rectifier, a utilization device, said device having an operating condition which varies in accordance with an applied voltage, means connecting said device across said second condenser, thereby to supply said voltage to said device, means to produce an electromotive force varying in accordance with the deviation of said operating condition from a



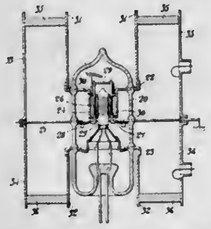
desired value, and means to impress said electromotive force on said control electrode thereby to vary the effective resistance of said one rectifier, said variation being in direction to compensate for said deviation, thereby tending to maintain constant said operating condition.

2,474,581
WELL LOGGING
Lynn G. Howell, Silver Spring, Md., assignor to Standard Oil Development Company, a corporation of Delaware
Application April 19, 1945, Serial No. 589,206
2 Claims. (Cl. 250—83.6)



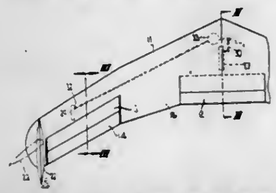
1. A method for logging a borehole which comprises passing through the borehole simultaneously and at the same speed a plurality of spaced Geiger-Mueller detectors of radiations resulting from nuclear disintegrations thereby obtaining two separate electrical impulse counts responsive said counts into proportional varying electrical to radioactivity along the borehole, converting signals and recording separately said signals.

2,474,582
GAS TURBINE PLANT
Ingvar Karl Einar Jung, Langedrag, near Goteborg, Sweden
Application June 26, 1944, Serial No. 542,147
In Sweden July 10, 1943
3 Claims. (Cl. 60—41)



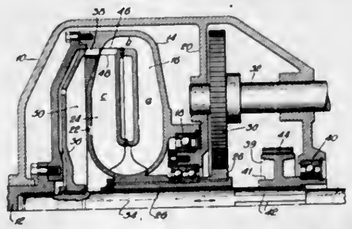
1. A gas turbine plant comprising, a high-pressure gas turbine, a low-pressure gas turbine, a series connection therebetween for feeding the effluent of the high-pressure turbine to the low-pressure turbine, a heat chamber in said connection, a compressor having two rotors arranged for opposite rotation, means for coupling each rotor to a separate one of said turbines so as to be driven thereby, a load connected to the low-pressure turbine so as to be driven thereby, a connection for delivering the compressed fluid to the high-pressure turbine, a heat chamber in said connection, and means for recovering heat from the exhaust gases of the low pressure turbine and delivering it to the compressed fluid before entering said last-mentioned heat chamber.

2,474,583
TEMPERATURE CONTROL MEANS
Warren K. Lewis, Jr., Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware
Application January 19, 1946, Serial No. 642,397
6 Claims. (Cl. 260—449.6)



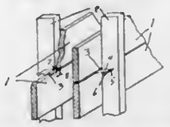
4. The method of abstracting heat from an exothermic reaction carried out in a reaction zone in which a powdered catalyst material is present in a lower dense phase suspension and in an upper dilute phase suspension contiguous with the former which comprises providing a flowing confined stream of a coolant in the upper dilute phase, permitting vaporous products issuing from the dense suspension to flow in heat exchange relationship with said coolant under conditions of temperature and pressure such that at least a portion of said vapors are condensed, permitting said condensate to return by gravity to said dense phase, where it contacts said last-named phase under conditions of temperature and pressure permitting vaporization of said condensate whereby heat is abstracted from said dense phase.

2,474,584
AMPLIFIER TUBE FOR HIGH FREQUENCIES
Gerhard Liebmann, Cambridge, England, assignor to Cathodeon Limited, Cambridge, England, a British company
Application July 29, 1946, Serial No. 687,022
In Great Britain November 20, 1941
12 Claims. (Cl. 250—27.5)



1. An amplifier tube having an envelope, concentric electrodes disposed coaxially in said envelope, said electrodes including a cathode next surrounded by a grid electrode and an anode surrounding said grid electrode, said grid electrode next to said cathode being conductively mounted by one end thereof on a metal screening annulus sealed through the wall of said envelope substantially perpendicularly to the axis of said envelope, the other end of said grid electrode being closed by a metal screening cap conductively secured thereto, a flanged metal member sealed through said envelope wall substantially parallel to said screening annulus and electrically connected to said cathode, with the flange of said member disposed outside said envelope.

2,474,585
CONTROL OF FLYING-WING AIRCRAFT
John Lloyd, Coventry, England, assignor to Sir W. G. Armstrong Whitworth Aircraft Limited, Coventry, England
Application May 9, 1944, Serial No. 534,763
In Great Britain August 28, 1943
5 Claims. (Cl. 244—13)

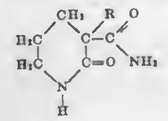


1. In an aeroplane of the flying-wing type, the combination of a main lifting flap means, having a span which is less than one-third of the total wing span, at the trailing edge of its centre portion, a trimmer towards each wing tip at the trailing edge thereof, each said trimmer carrying a respective control flap at its trailing edge, operating means for lowering said main lifting flap means from, and returning it to, a neutral position, a control for said main lifting flap operating means, operating means for raising said trimmers above, and returning them to, a neutral position, a control, independently actuable with respect to the first-mentioned control, for said trimmer operating means, and means pivotally connected to said second named operating means and to said first named operating means by a lost motion connection whereby, when the said main lifting flap means is lowered by actuation of said first-mentioned control said trimmers are automatically raised as a result of which the pitching moment resulting from the lowering of said main lifting flap means can be counteracted without it being necessary for the said control for the trimmer operating means to be actuated additionally.

2,474,586
REVERSIBLE HYDRAULIC COUPLING
Alf Lysholm, Stockholm, Sweden, assignor, by mesne assignments, to Jarvis C. Marble, New York, N. Y., Leslie M. Merrill, Westfield, N. J., and Percy H. Batten, Racine, Wis., as trustees
Application August 25, 1943, Serial No. 500,007
5 Claims. (Cl. 60—54)

1. A hydraulic power transmitter of the closed circuit type comprising a primary member providing pump blades arranged to discharge fluid substantially radially and having cambered nose portions bent in the direction of pump rotation, a secondary member providing turbine blades arranged to discharge fluid substantially radially and a reversing member providing reversing guide blades, said reversing member being movable to shift said reversing blades from a position in the circuit between the outlet side of the pump blades and the inlet side of the turbine blades to a position outside of the circuit, said pump and turbine blades constituting the only blading in the circuit when said reversing blades are withdrawn therefrom.

2,474,587
CONCRETE FORM BOARD FASTENER
Vincent H. Moore, Salinas, Calif.
Application October 12, 1945, Serial No. 621,907
2 Claims. (Cl. 25—131)



1. A concrete form board fastener for securing adjacent pairs of boards of one side of a wall form against a supporting member, said fastener comprising a strip, a nail carried by said strip at one end of the latter in a position extending transversely of the length of said strip but in the plane of the latter with the head of said nail adjacent one of the longitudinally extending edges of said strip, the opposite end of said strip being bent in direction transversely of the plane of said strip for engaging one of the laterally directed surfaces of the boards of each such adjacent pair when said opposite end is disposed flat between said boards, the portion of said strip adjacent said head being cut away to reduce the width of said strip to facilitate engaging the head of said nail by the claws of a hammer.

2,474,588
ALCOHOL PROCESS
Charles E. Morrell, Westfield, and Richard F. Robey, Cranford, N. J., assignors, by mesne assignments, to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application December 31, 1945, Serial No. 638,588
7 Claims. (Cl. 260—639)

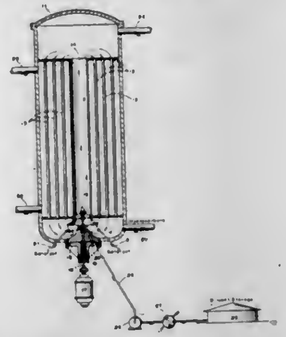
1. An improved method of manufacturing ethyl alcohol which comprises contacting a hydrocarbon mixture containing ethylene with 95–100% H_2SO_4 on a hydrocarbon-free basis, at 60–100° C. and a pressure of 300–500 pounds per square inch gauge to produce an acid extract containing 1.0–1.3 mols of ethylene per mol of H_2SO_4, then contacting said extract with a hydrocarbon mixture containing ethylene for 1–3 hours at a temperature of 80–110° C. and a pressure of 300–500 pounds per square inch gauge to produce an extract containing at least 1.4 mols of ethylene per mol of H_2SO_4 and hydrolyzing the last named extract with water to produce ethyl alcohol.

2,474,589
SUBSTITUTED 3-CARBAMYL-2-PIPERIDONES AND METHOD FOR PREPARING THEM
Glen H. Morey, Terre Haute, Ind., assignor to Commercial Solvents Corporation, county of Vigo, Ind., a corporation of Maryland
No Drawing. Application March 5, 1945, Serial No. 581,183
4 Claims. (Cl. 260—294)

1. As new compositions of matter 3-carbamyl-2-piperidones having the following general formula:

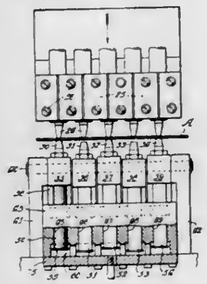
wherein R is a member selected from the group consisting of alkyl and aralkyl.

2,474,590
PROCESS FOR PREPARING 1,2,3,4,5,6-HEXACHLOROCYCLOHEXANE
Glen H. Morey, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a corporation of Maryland
No Drawing. Application November 16, 1945, Serial No. 629,197
4 Claims. (Cl. 260—648)



1. In a process for preparing 1,2,3,4,5,6-hexachlorocyclohexane, the steps which comprise preparing a two liquid layer system consisting of an aqueous lower layer and an upper benzene layer, said lower layer containing a mixture of a soluble base and an inert water soluble salt in an amount sufficient to render the specific gravity of the said aqueous lower layer at least as high as that of the chlorinated benzene produced in the reaction, and passing a stream of chlorine into said lower layer to react at the interface with said benzene layer.

2,474,591
NUTCRACKER
Donald H. Murph, Dallas, Tex.
Application April 1, 1946, Serial No. 658,786
3 Claims. (Cl. 146—13)

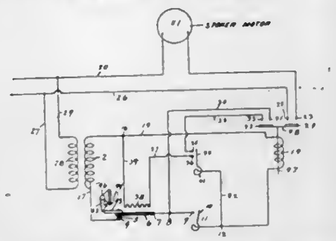


1. A nut shell cracker comprising a base having a concave receptacle affixed thereon, a U-shaped frame affixed adjacent an end of said base and perpendicular thereto, having slots in the sides thereof and rectilinear perforations in the face thereof, a perpendicularly adjustable unit slidable within said frame, having extrusions for slidable engagement within said slots and being a guide for said unit, and additional extrusions capable of rigid engagement within said rectilinear perforations, means for sustaining said adjustable unit in rigid proximity with said frame, a pivoting means laterally of said adjustable unit and extending through said slots in the sides of said frames and being an additional guide for said unit, a lever pivoted on said pivoting means, capable of vertical movement, and a concave receptacle affixed subjacent thereto for reciprocal action with said receptacle affixed to said base.

2,474,592
POLYMERIZATION OF ISOBUTYLENE WITH A DIOLEFIN
Frederick A. Palmer, Wooster, Tex., assignor to Standard Oil Development Company, a corporation of Delaware
Application May 5, 1944, Serial No. 534,366
3 Claims. (Cl. 260—85.3)

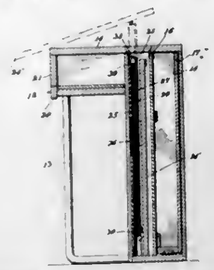
3. In a method for polymerizing liquefied isobutylene with a liquefied diolefin under conditions to form a rubber-like polymer in a reaction zone in which the isobutylene and diolefin are agitated by mechanical means carried on a rotating shaft immersed in said liquids, the improvement which comprises flowing a stream of refrigerated liquid diluent into said reaction zone longitudinally along that portion of said shaft which is immersed in said liquids.

2,474,593
MULTIPOINT SPOT WELDING MECHANISM
Henry B. Putnam, Muskegon Heights, Mich., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application September 18, 1947, Serial No. 774,726
8 Claims. (Cl. 219—4)



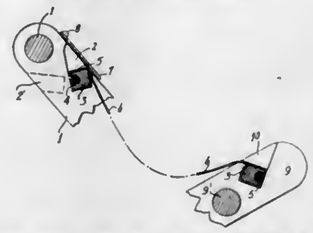
1. A multi-point spot welding mechanism comprising a support frame having means adaptable to carry an upper platen for movement in a vertical plane, a plurality of upper electrodes operatively and adjustably carried by said platen, a plurality of lower electrodes each operatively carried by an arm individually and pivotally associated with said support frame, and hydraulic means including a viscous liquid and pistons operatively associated with said lower electrodes and adaptable to provide equalizing pressure to said lower electrodes individually, thereby causing the necessary pressure contact between the respective upper and lower electrodes at the time of weld.

2,474,594
COMBINED ELECTRIC FAN AND ELECTRIC HEATER ASSEMBLY
John T. Rausch and George Towne, Danville, Ill.
Application November 2, 1946, Serial No. 707,472
7 Claims. (Cl. 219—39)



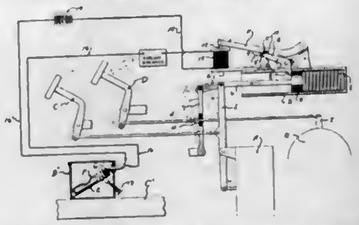
1. A heater, fan and table assembly comprising a table having a top and supporting legs, an electric motor attached to the under surface of said top and depending therefrom, an air deflector in the general form of an inverted cone secured to the undersurface of said top and covering said motor, a shaft of said motor extending downwardly through said air deflector, a fan mounted on the lower end of said shaft and arranged to direct air upwardly against said deflector, an electric heating unit positioned below said fan and a support for said heating unit secured to said legs.

2,474,595
CONTROL FOR ELECTRIC MOTORS
Max C. Richardson, Portland, Oreg., assignor to Iron Fireman Manufacturing Company, Portland, Oreg.
Application October 10, 1944, Serial No. 558,044
3 Claims. (Cl. 318—471)



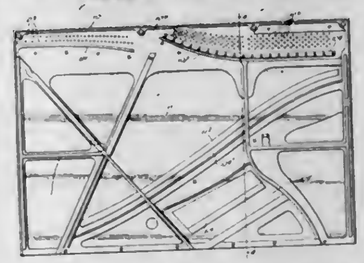
1. The combination in a motor control system of a motor circuit, an energizing circuit, holding circuit, and a de-energizing circuit, said motor circuit comprising in series, electric supply lines, an electromagnetic motor starting switch and said motor, said energizing circuit comprising in series a source of electric power, the operating coil of said electromagnetic motor starting switch, a circuit opening means and a circuit closing means, said holding circuit being in parallel with said circuit closing means and comprising in series means for opening said holding circuit when said energizing circuit is opened and means for de-energizing said motor in response to a condition when said circuit closing means is open, said de-energizing circuit being in parallel with the operating coil of said electromagnetic switch and comprising in series a time delay means for operating said circuit opening means and means for opening said de-energizing circuit in response to a condition.

2,474,596
DESK AND TABLE COMBINATION
August Schomburg, New York, N. Y.
Application July 13, 1946, Serial No. 683,368
6 Claims. (Cl. 45—70)



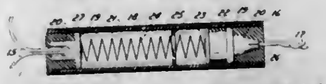
1. In a device of the class indicated, a desk structure having an upright, hollow floor-supported rear portion and a forwardly directed hollow extension integral with the rear portion and being spaced from the floor, a pair of spaced supporting members for the extension depending from the latter and having rearwardly directed continuations adapted to rest upon the floor, and a drawing board operatively mounted within and movable relative to said rear portion and being adapted to swing into contacting position with said hollow extension, and an adjusting mechanism for the drawing board provided in said rear portion.

2,474,597
EASY CHAIR
Shimon Shwarzowsky, Tel Aviv, Palestine
Application February 11, 1947, Serial No. 727,919
In Palestine February 25, 1946
1 Claim. (Cl. 155—119)



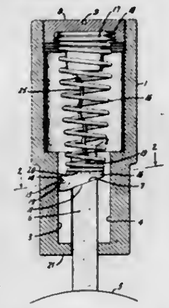
In an easy chair of the type having a frame composed of longitudinal bars connected by fixed bars extending across the opposed faces, and a canvas extending from the top of the back to the front of the seat, slots partially incised in at least two longitudinal bars, each of said slots having side walls and a bottom wall forming seats in the face and an entrance opening in an edge of the longitudinal bar, and an additional cross-bar joined to said longitudinal bars, the opposed ends of which are conformingly shaped to the slots to prevent rotation and slidably mounted through the entrance opening into engagement with the said seats, said cross-bar having a longitudinal groove and a rod having a canvas sheathed therein in said groove, the free ends of said rod extending into said slots in engagement with one of said seats for non-rotationally holding said cross-bar and rod in said slots while holding the canvas in the groove of the cross-bar.

2,474,598
AUTOMATIC BRAKE SETTING AND CLUTCH RELEASE CONTROL MECHANISM FOR TRACTORS
Melvin J. Smies, Sheboygan, Wis.
Application October 18, 1947, Serial No. 780,716
1 Claim. (Cl. 180—82)



In a tractor having a manually controlled lever actuated clutch and a manually controlled lever actuated brake; automatic means for throwing out the clutch and setting the brake when the tractor assumes a predetermined angle, comprising a housing, a piston reciprocatively mounted in the housing, a compressible coil spring interposed between the piston and housing end, a trigger for locking the piston when the same is under its spring tension, a rock arm and an actuating lever connected to the piston and the manually controlled clutch and brake levers, a magnet for releasing the trigger, an electric circuit connecting the magnet and an angularly disposed mercury switch in the electric circuit for normally breaking the circuit, when the tractor is at a safe longitudinally disposed angle, the mercury switch being adapted to close the circuit when the tractor is tilted rearwardly at an abnormal angle, whereby the tractor brake and clutch are set.

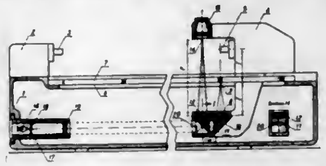
2,474,599
PIANO CONSTRUCTION
George H. Stapely, South Haven, Mich., assignor to Everett Piano Company, a corporation of Illinois
Application September 25, 1944, Serial No. 555,695
6 Claims. (Cl. 84—186)



1. A piano of the character described, including: a metal plate; strings connected to the front of the plate; a wrest plank connected to the back of the plate at the top thereof; webbed metal back posts, each post having its top portion connected to the top of the wrest plank, an intermediate portion fulcruming at the lower back corner of the wrest plank, and a bottom portion tending to move backward under pull of the strings; and means to fasten each said bottom portion against backward movement.

2,474,600
SHUNT CONTROL UNIT
John L. Stender and John I. Stender, Erie, Mich.
Application November 25, 1947, Serial No. 787,896
4 Claims. (Cl. 200—118)

3. A shunt control unit embodying a tubular insulation housing, a pair of terminals providing two conductor contacts exterior of and spaced apart by the housing, insulation sealing means anchoring the terminals to provide air-tight closure for a chamber provided in the housing between the terminals, an insulation spacing ring adjacent one terminal, a fusible disk spaced from said one terminal by the ring, and a spring extending from the other terminal and under compression in said insulation chamber to hold the disk against the ring and toward the one terminal, said spring being an electrical conductor adapted to coact for flash-fusing of the disk and thereby connecting the terminals in converting the unit into a negligible resistance conductor.



2,474,601
BRUSH MECHANISM
Charles A. Thomas, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York
Application March 19, 1948, Serial No. 15,781
10 Claims. (Cl. 171—323)

1. In combination, a brush holder tube of the cartridge type having a longitudinal slot formed therein with a longitudinal groove in the leading and trailing sides of said slot, a current collector contact brush member arranged for longitudinal movement in said slot for contacting a current collector and having an angular surface remote from said current collector, means on the end of said brush holder tube remote from said current collector adapted to close said slot, a brush engaging member formed of conductive material in said slot arranged in sliding engagement with said angular surface of said brush member and having a portion arranged in engagement with a side of one of said grooves, and a spring member in said slot held in compression between said closure means said engaging member and exerting a force thereon, said engaging member in cooperation with said angular surface and said side of said one groove providing a component of the force exerted by said spring member parallel with the axis of said tube member for resiliently urging said brush member against said current collector and another component of said force at right angles to said axis for biasing said brush member against the side of said slot opposite said one groove for preventing chattering.

2,474,602
LENGTH MEASURING MACHINE HAVING LENS AND REFLECTOR MEANS
Fernand Turrettini, Bellevue-Geneva, Switzerland, assignor to Societe Genevoise d'Instruments de Physique, Geneva, Switzerland, a Swiss firm
Application December 18, 1947, Serial No. 792,437
In Switzerland April 28, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires April 28, 1965
1 Claim. (Cl. 88—1)

An optical end measuring machine comprising in combination, a frame, a guideway on said frame, a movable slide on said guideway, a first length measuring anvil at one end of said frame, a second length measuring anvil on said slide facing said first anvil, an ocular on said slide, a graduated scale in said guideway, a collimating lens on said slide focussed on said scale, an objective having its focus in the image plane of the ocular, a reticle and a source of light at said frame end, a light collimator in said frame focussed on said reticle, a first mirror on said slide in spaced relation with said collimating lens, a second mirror on said slide in spaced relation with said objective and light collimator, said first and second mirrors being positioned to reflect the light from said collimating lens through said objective and thence to the image plane of said

ocular, and a third mirror on said slide in spaced relation with said objective and collimating lens, said third mirror being positioned to reflect the light from said light collimator through said objective and thence to the image plane of said ocular, whereby said ocular enables simultaneous observation of an image of said scale and of an image of said reticle, the latter serving as a guiding mark for the former.

2,474,603
INHIBITION OF CORROSION IN WELLS
Prentiss S. Viles and Elza Q. Camp, Goose Creek, Tex., assignors, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J., a corporation of Delaware
No Drawing. Application December 20, 1946, Serial No. 717,614
8 Claims. (Cl. 252—8.55)

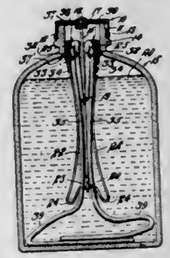
1. In the production of corrosive fluid having an acid reaction including carbon dioxide from a subsurface formation wherein the fluid being produced is brought into contact with ferrous metal, the step of introducing a corrosion inhibiting amount of butyl mercaptan into the corrosive liquid.

2,474,604
RUST-PREVENTING COMPOUNDS
Jones I. Wasson and John C. Zimmer, Union, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application June 11, 1947, Serial No. 754,085
6 Claims. (Cl. 252—48.6)

2. A composition of the character described consisting essentially of a mineral oil containing 0.01 to 0.1% by weight of an alkyl thioether of a C_2 to C_4 saturated fatty acid wherein the etherifying radical is attached to a carbon atom outside the carboxyl group in said acid, said alkyl radical containing 10 to 24 carbon atoms and 0.01 to 5% of a C_{12} to C_{22} fatty acid ester of a polyhydric alcohol having from 12 to 80 carbon atoms.

2,474,605
LIQUID DIFFUSER
William H. Wheeler, New York, N. Y., and Leonard B. Wamnes, Aberdeen, Miss., assignors to Airkem, Inc., New York, N. Y., a corporation of New York
Application October 26, 1948, Serial No. 56,648
14 Claims. (Cl. 299—20)

1. A liquid diffuser comprising, in combination, a vessel having a mouth of a certain cross-sectional area, elongated stem means extending down through the mouth into said vessel, a pair of anchoring means on said stem means located a certain distance apart, and a strip of wicking anchored to said stem means at spaced points by said pair of anchoring means with the length of said strip between said pair of anchoring means being appreciably longer than the distance be-

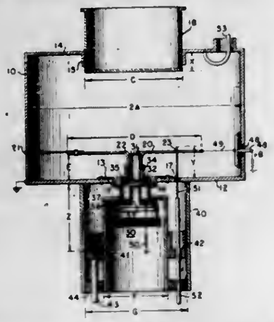


tween the latter to provide a loop of wicking capable of being flared laterally exteriorly of the vessel mouth when said stem means is partially withdrawn from the latter, said stem means and wicking loop constituting parts of a diffuser assembly of such configuration and bulk as to be self-supporting in the vessel mouth when withdrawn to a diffusing position.

2,474,606
WICK-SUPPORTING DEVICE
Constant E. Nicolet, Westport, Conn., assignor, by mesne assignments, to Airkem, Inc., New York, N. Y., a corporation of New York
Application June 26, 1945, Serial No. 601,638
5 Claims. (Cl. 299—20)

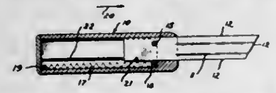
1. In a wick and a supporting device therefor, the combination of an elongated plate, hook portions struck outwardly from the plate adjacent opposite ends thereof on each side of the plate, and wick portions supported at their upper ends on each side of the plate by such hook portions, each wick portion comprising a length of wick-forming material folded at substantially its center to form a wick portion of double thickness, the inner fold carrying an eyelet adjacent its upper end, both folds carrying an eyelet at a point spaced from its lower end, the upper and lower eyelets, when the wick portions are free from tension, being spaced apart a distance less than the distance between the upper and lower hook portions on each side of the plate, such hook portions passing through such eyelets and supporting a wick portion on each side of the plate while under tension between such eyelets, the wick portions being of sufficient cross-sectional area to support the wick assembly in elevated position through frictional contact between the wick and the neck of the vessel, the lower terminals of the wick portions being of sufficient length to project into the fluid when the wick assembly is in such elevated position.

2,474,607
LIQUID DIFFUSER
William H. Wheeler, New York, and Leonard B. Wamnes, White Plains, N. Y., assignors to Airkem, Inc., New York, N. Y., a corporation of New York
Application June 13, 1946, Serial No. 676,521
14 Claims. (Cl. 299—20)



1. A liquid diffuser comprising, in combination, a vessel having a mouth, elongated stem means extending down through the mouth into said vessel, upper and lower anchoring means on said stem means located a certain longitudinal distance apart, a length of wicking anchored to said stem means on one side thereof by said upper and lower anchoring means appreciably longer than the distance between said anchoring means to provide a loop, and flaring means connected at a lower portion thereof to said stem means and having a free upper portion spring-biased laterally away from said stem means and engaging said wicking loop to flare the latter laterally away from said stem means when said upper free flaring portion is permitted to move laterally away from said stem means above the vessel mouth upon withdrawal of said stem means.

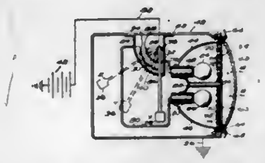
2,474,608
ULTRA-SHORT-WAVE SIGNAL-TRANSLATING DEVICE
Harold A. Wheeler, Great Neck, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application November 30, 1944, Serial No. 565,828
3 Claims. (Cl. 315—39)



1. An ultra-short-wave signal-translating device comprising, a cavity resonator having an aperture in one wall thereof and having a particular fundamental mode of resonance, conductive means disposed within said resonator in an equipotential plane for coupling an electron-discharge device thereto while preserving said fundamental mode of resonance and spaced from said one wall by a substantial fraction of the distance to the opposite wall of said resonator, an electron-discharge device having spaced anode-electrode,

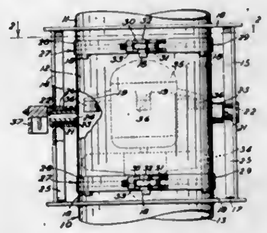
cathode-electrode and control-electrode structures and projecting through said aperture with a first one and a second one of said electrode structures connected respectively to said one wall of said resonator and to said conductive means while the third one of said electrode structures is external to said resonator, means external to said

resonator coupling said first and third electrode structures, and a short-wave choke projecting into said resonator, connected to said conductive means and disposed in said equipotential plane for applying an excitation potential to said electron-discharge device through said conductive means.



2,474,609
SAFETY KNIFE
Allen C. Wolf, Atlanta, Ga., assignor of one-third to Albert Irvin Jackson, Whitmire, S. C., and one-third to Alton Jerrell Ingrom, Atlanta, Ga.
Application March 7, 1946, Serial No. 652,591
3 Claims. (Cl. 30—162)

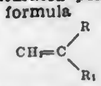
1. A safety knife comprising in combination, a sheath formed with an opening in one end thereof, a slidable blade in said sheath, said blade being projectible and retractible through said opening, a push-button on said blade, said sheath having in one side thereof a longitudinally extending slot, said button slidably engaging said slot and protruding therethrough, a coiled tension spring in said sheath and disposed on one side of the blade, an eye on said blade and a further eye in the closed end of said sheath, said spring extending between said eyes and normally urging said blade into the retracted position, and means to prevent the blade from entering the space occupied by said spring.



2,474,610
QUANTITATIVE DECELERATION INDICATOR
Elton P. Wunsch, Providence, R. I.
Application May 29, 1945, Serial No. 596,480
6 Claims. (Cl. 177—311.5)

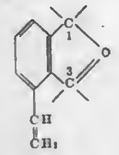
1. A quantitative deceleration indicator, comprising two light sources, means to project different colored rays from each of said light sources in the same direction whereby each light source may indicate opposite extremes of deceleration, means to continuously blend and diffuse said projected rays in said direction, and means responsive to the rate of deceleration for inversely varying the intensity of each light source from a min-

imum up to a maximum amount of deceleration whereby the blended rays successively transmitted from said indicator may indicate quantitative rates of deceleration.



2,474,611
MOUNTING OF FAN UNITS IN VENTILATING SHAFTS
Thomas Wylie, Twickenham, England
Application October 21, 1946, Serial No. 704,698
In Great Britain April 23, 1946
6 Claims. (Cl. 230—42)

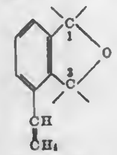
1. A ventilating system including a ventilating shaft comprising an intermediate portion and adjacent portions two side plates connected by apertured top and bottom plates within which the adjacent portions of the shaft are secured, a stud shaft projecting inwardly from each side plate towards the intermediate portion of the ventilating shaft, and diagonal ribs on each side plate meeting in a central bush surrounding the corresponding stud shaft.



2,474,612
COPOLYMERS OF VINYL ISO-COUMARANS WITH ETHYLENICALLY UNSATURATED COMPOUNDS AND PROCESS FOR OBTAINING SAME
Arthur L. Barney, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 19, 1946, Serial No. 697,900
7 Claims. (Cl. 260—80.3)

1. A copolymer comprising the copolymerization product of a vinyl isocoumaran and an ethylenically unsaturated polymerizable organic compound of the formula

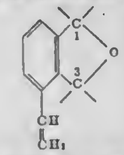
in which R is selected from the group consisting of hydrogen and hydrocarbon radicals,



and R_1 is a non-ionic radical which exerts, when attached to a benzene nucleus, a positive electrostatic polarizing force of from +0.32 to +2.21 on the adjacent carbon to carbon double bond, said copolymer containing, by weight of said vinyl isocoumaran and ethylenically unsaturated compound, from 1% to 50% of said vinyl isocoumaran, said vinyl isocoumaran being of the formula

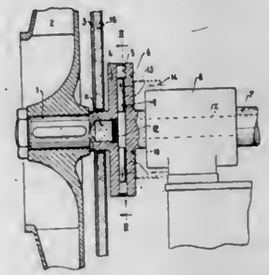
wherein the two valences of each of carbon atoms at positions 1 and 3 are satisfied by substituents selected from the group consisting of hydrogen and hydrocarbon radicals consisting of monovalent alkyl radicals, monovalent aryl radicals, and divalent polymethylene radicals having a chain of four to five carbon atoms, not more than one of said substituents being hydrogen, the valences of carbon atoms at positions 1 and 3, when satisfied by a polymethylene radical, being attached to the terminal carbon atoms by a divalent polymethylene radical having a chain of four to five carbon atoms to form a polymethylene ring of five to six carbon atoms.

2,474,613
COPOLYMERS OF VINYL ISOCOUMARANS WITH STYRENES AND PROCESS FOR OBTAINING SAME
Arthur L. Barney, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 19, 1946, Serial No. 697,901
7 Claims. (Cl. 260—74)



1. A copolymer comprising the copolymerization product of a vinyl isocoumaran and a substance selected from the group consisting of styrene and halogenated styrenes, said copolymer containing, by weight of said vinyl isocoumaran and said substance, from 2% to 50% of said vinyl isocoumaran, said vinyl isocoumaran being of the formula

wherein the two valences of each of carbon atoms at positions 1 and 3 are satisfied by substituents selected from the group consisting of hydrogen and hydrocarbon radicals consisting of monovalent alkyl radicals, monovalent aryl radicals, and divalent polymethylene radicals having a chain of four to five carbon atoms, not more than one of said substituents being hydrogen, the valences of carbon atoms at positions 1 and 3, when satisfied by a polymethylene radical, being attached to the terminal carbon atoms of a divalent polymethylene radical having a chain of four to five carbon atoms to form a polymethylene ring of five to six carbon atoms.

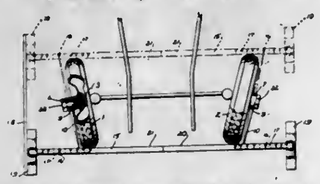


2,474,614
COPOLYMERS OF VINYL ISOCOUMARANS WITH 1,3-DIENES AND PROCESS FOR OBTAINING SAME
Arthur L. Barney, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 19, 1946, Serial No. 697,902
12 Claims. (Cl. 260—86.5)

1. A copolymer comprising the copolymerization product of a vinyl isocoumaran and a 1,3-diene, said co-polymer containing, by weight of said vinyl isocoumaran and said diene from 5% to 95% of said vinyl isocoumaran, said vinyl isocoumaran being of the formula

wherein the two valences of each of carbon atoms at positions 1 and 3 are satisfied by substituents selected from the group consisting of hydrogen and hydrocarbon radicals consisting of monovalent alkyl radicals, monovalent aryl radicals, and divalent polymethylene radicals having a chain of four to five carbon atoms, not more than one of said substituents being hydrogen, the valences of carbon atoms at positions 1 and 3, when satisfied by a polymethylene radical, being attached to the terminal carbon atoms of a divalent polymethylene radical having a chain of four to five carbon atoms to form a polymethylene ring of five to six carbon atoms.

2,474,615
COUPLING COOLING
Jan C. Busquet, Hengelo, Netherlands, assignor to Machinefabriek Gebr. Stork & Co. N. V., Hengelo, Netherlands, a company of the Netherlands
Application June 5, 1946, Serial No. 674,561
In the Netherlands July 27, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires July 27, 1964
6 Claims. (Cl. 287—129)

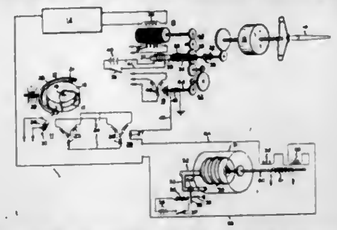


1. A coupling of low heat conductivity between two spaced axially aligned rotating shafts comprising: two spaced parallel discs mounted on adjacent ends of said shafts, one of said discs having an aperture therein to permit the flow of a fluid through said aperture, and means to connect said discs at spaced intervals near their

2,474,622

peripheries whereby a cooling fluid may flow through said aperture and between said discs to cool said means.

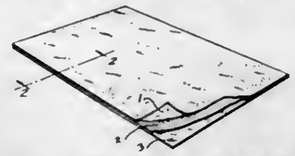
2,474,616
TOE GAUGE
Biagis Castiglia, New York, N. Y., assignor to Wheel Aligning Necessities, Inc., New York, N. Y., a corporation of New York
Application July 25, 1947, Serial No. 763,632
9 Claims. (Cl. 33—203.21)



2. In a toe gauge for vehicle wheels, a scale bar and scales movable to or from the front or back of said wheels, pointers and means rotatably securing said pointers to abut the faced ends of the hubs of the wheels, whereby said pointers may be swung to register with said scales at the front or rear and to swing on a plane perpendicular to the axes of rotation of said wheels.

2,474,617
MANUFACTURE OF ARTIFICIAL FIBERS
Edward Terry Cline, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application January 3, 1947, Serial No. 720,099
5 Claims. (Cl. 18—54)

1. In the process for manufacture of filaments, fibers and like structures from a synthetic linear hydroxylated polymer wherein an aqueous solution of from 5% to 30% by weight of said polymer is coagulated in an aqueous solution of an inorganic salt, the improvement which comprises drawing the wet spun filaments at least twice their initial length under a tension which orients the filaments to an extent such that they do not stick together after washing with water alone and drying, holding the drawn filaments under tension at least twice their original length and while the filaments are so held washing them to remove said salt with an aqueous wash which consists essentially of water and which causes swelling of the filaments in their undrawn and unoriented state, and then drying the filaments while so held, said hydroxylated polymer having at least one alcoholic hydroxyl group per 2.5 carbon and not more than one hydroxyl per two carbons of the polymeric chain.

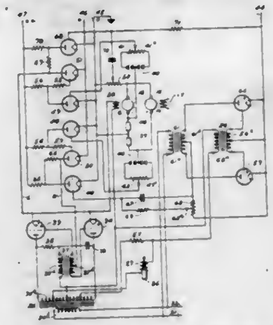


2,474,618
ALTITUDE CONTROL
Richard L. Divoll, Maywood, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application April 8, 1946, Serial No. 660,342
15 Claims. (Cl. 318—481)

15. In an automatic pilot for aircraft having a movable control surface and a servomotor for operating said surface, altitude responsive means for governing the operation of the motor to maintain craft flight at a predetermined altitude level comprising a normally centered bellows normally opened on both of its sides to static pressure, means for closing one side of said bellows from communication with said pressure when said craft has attained a predetermined altitude level whereby changes in said pressure due to departure by the craft from the predetermined altitude level are communicated to the other side of said bellows whereby the latter expands or contracts, and an electrical device comprising a pair of stationary series opposed windings and

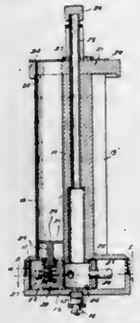
a normally centered movable winding inductively coupled therewith and connected for movement by said bellows longitudinally of said windings for developing a signal proportional to the amount of its displacement from a null position for governing operation of said motor to deflect said surface to return the craft to said predetermined altitude.

2,474,619
HEAT-SEALABLE SHEET MATERIAL
Robert A. Farrell and Charley L. Wagner, Menasha, Wis., assignors to Marathon Paper Mills Company, Rothschild, Wis., a corporation of Wisconsin
Application January 22, 1944, Serial No. 519,391
10 Claims. (Cl. 154—50)



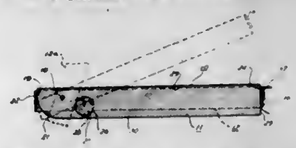
1. A heat-sealable packaging material comprising in adhered relation a relatively impermeable base sheet material and a relatively porous tissue sheet material adhered to said base sheet by an intermediate flexible thermoplastic adhesive film, said adhesive film being confined to the inner surface of the porous sheet and the outer exposed surface of said porous sheet being substantially unchanged from its original characteristics, said film being present in amount so that upon application of heat and pressure to selected areas of the sheet material said adhesive will migrate differentially through said porous sheet at said areas rather than through said base sheet material to generate an adhesive sealing film on the outer surface of said porous sheet.

2,474,620
COILING MACHINE CONTROLLER
Douglas W. Fath, Milwaukee, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application April 12, 1947, Serial No. 741,085
7 Claims. (Cl. 242—75)



2. For use with a wire drawing machine having a reel for receiving and storing the drawn wire,

a motor in driving connection with the reel and a generator for supplying variable energy to said motor, the combination with electronic regulating means, including an impedance device responsive to the tension exerted upon the wire by the reel, for regulating the energy flow between said gen-



erator and said motor, said regulating means tending to vary said flow in excess of the variation required by said tension responsive means, of means responsive to said energy flow to check the effect of said regulating means substantially coincident with attainment of the required tension.

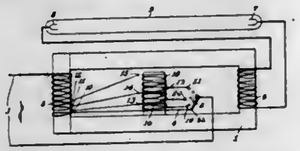
2,474,621
TOOTHBRUSH STERILIZER
Joseph Federico, Newark, N. J.
Application May 5, 1947, Serial No. 746,014
4 Claims. (Cl. 21—87)

1. A tooth brush sterilizer and retainer comprising a receptacle for containing a sterilizing medium, an upper part disposed above the receptacle, a cup shaped member enclosing the receptacle and connected to the upper part, tooth brush containers extending upwardly from the upper part, cylinders connected to the upper part and depending therefrom into the cup shaped base, conduit means connecting the cylinders with the receptacle so that sterilizing liquid may be communicated to the cylinders, plunger elements operable in the cylinders and adapted to be depressed by the tooth brushes when disposed in their containers whereby to cause the sterilizing liquid to be forced upwardly onto the brush and into the containers.

2,474,622
DEVICE FOR SHARPENING CUTLERY
William E. Fleming and Edward C. Fleming, Cedar Rapids, Iowa
Application November 26, 1948, Serial No. 62,104
3 Claims. (Cl. 51—187)

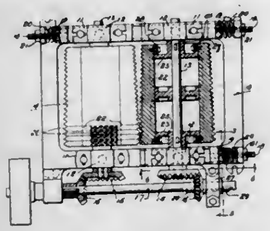
1. In a device for sharpening cutlery, a generally rectangular, block-like base, one end of the base being curved at the lower portion thereof and the opposite end being relieved at the upper edge thereof, the base having a transverse, cylindrical bore extending therethrough at a spaced distance from the bottom surface thereof, and having a narrow transverse slot extending upwardly therethrough, from the bottom surface of the base into the transverse bore, a roll of abrasive tape received in said bore with one end thereof extending downwardly through the slot, upwardly over the curved end of the base, lengthwise over the top surface and downwardly over the said opposite end thereof, a clamping member comprising a rectangular frame received over the base and adapted to bind the abrasive tape between the ends thereof and the end portions of the base, a pivot pin extending transversely through the base and clamping member adjacent the curved end of the base, the pivot pin being positioned a slightly greater distance from the curved end of the base than from the bottom surface thereof.

2,474,623
DEVICE FOR SHARPENING CUTLERY
William E. Fleming, Cedar Rapids, Iowa
Application February 7, 1948, Serial No. 6,914
5 Claims. (Cl. 51—187)



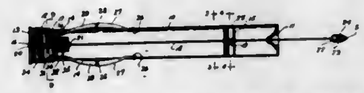
1. In a cutlery sharpening device, a base member, a top member hingedly attached thereto adjacent one end thereof, an abrasive tape tightener comprising a member rotatably mounted in the base member, positioned transversely thereof and engageable by the top member to be forced downwardly thereby, an abrasive tape having a portion thereof looped downwardly beneath the tightener, extending lengthwise over the upper surface of the top member and having portions thereof frictionally engaged between adjacent end portions of the top and base members adjacent opposite ends thereof.

2,474,624
COMPENSATED MAGNETIC-LEAKAGE-TYPE TRANSFORMER
William Foerste, Pelham Manor, N. Y.; Anna Kane, administratrix of said William Foerste, deceased, assignor of one-half to Eugene A. Quarrie, Scarsdale, N. Y.
Application January 14, 1946, Serial No. 641,134
4 Claims. (Cl. 323—44)



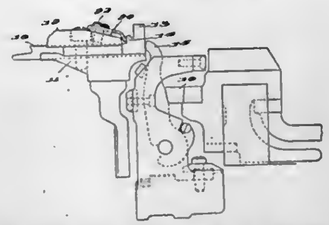
4. A magnetic leakage type transformer, comprising a closed magnetic core having a primary

winding with a plurality of taps intermediate its terminals, and a secondary winding; a variable reactor magnetically positioned between the primary and secondary windings and separated from said closed magnetic core by a non-magnetic gap for shunting from said secondary winding a portion of the flux generated by said primary winding, and including a coil thereon with taps equal in number to the said primary taps; a source of electrical energy supply, one lead thereof being



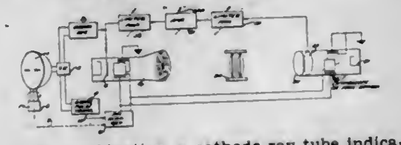
connected to one of the primary terminals; and switching means including a movable switch arm and switch points in number exceeding by one the number of taps, one of the points being connected with the other terminal of the primary winding and the remaining points with one terminal of the respective reactor coil portions, the other terminal of the coil portions being connected respectively with the primary winding taps, and the switch arm with the other lead of the source of power.

2,474,625
OPPOSED-ROLL CRUSHER WITH INTERLOCKING TEETH OF GRADUATED HEIGHTS
Theron G. Gerow, Chicago, Ill.
Application May 14, 1945, Serial No. 593,657
2 Claims. (Cl. 241—234)



1. A roll crusher for coal comprising a frame, two pairs of spaced bearing supports mounted on said frame with three of said supports slidably adjustable on said frame and the other of said supports fixed to said frame, bearings mounted on said supports, a pair of shafts rotatably mounted on opposite bearings, a roller rotatably carried by each of said shafts, said rollers positioned opposite each other, and spaced relative to each other as desired, by the slidable adjustment of said slidably mounted bearing supports, said rollers having interlocking teeth graduated from the highest at one end to the lowest at the other end, with the largest tooth of one roller opposite the largest tooth of the other roller, the smallest tooth of one roller opposite the smallest tooth of the other roller and the intermediate teeth of graduate sizes of one roller opposite the intermediary teeth of corresponding sizes of the other roller, said rollers adapted to crush coal with said teeth to produce coal having some pieces of desired maximum size with other pieces of a smaller size to produce an aggregate having mixed different sizes for maximum burning efficiency.

2,474,626
SPRING-DRIVEN SCREW DRIVER
Alfred Gunning, Houston, Tex.
Application March 2, 1946, Serial No. 651,535
1 Claim. (Cl. 145—50)



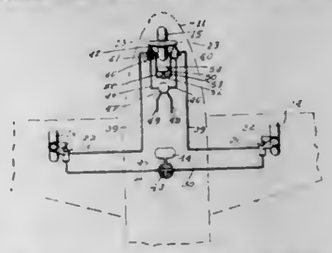
In a spring driven screw driver, an elongated hollow handle having a pair of opposed elongated longitudinal slots opening therethrough, a shaft extending longitudinally through the handle, said shaft being mounted to rotate about its longitudinal axis and being held against longitudinal movement relative to the handle, a screw driver bit carried by the shaft, a drive spring within the handle, said drive spring being connected to the shaft and to the handle for imparting rotary motion to the shaft, a rotary clutch collar fixed to the shaft within the handle, a slidable clutch collar surrounding and rotatable with respect to the shaft adjacent the rotary clutch collar, means carried by the handle to hold the slidable clutch collar against rotation relative to the handle, a clutch spring within the handle, said clutch spring bearing on the handle and on the slidable clutch collar to urge said slidable clutch collar to move longitudinally of the shaft and into frictional engagement with the rotary collar, a pair of opposed toggle action hand grips carried by the handle, said hand grips bowing outwardly through the opposed slots, and shoes carried by the hand grips and bearing on the slidable clutch collar in opposed relation to the clutch spring whereby pressure on the hand grips will move the slidable clutch collar against the effort of the clutch spring and out of engagement with the rotary clutch collar.

2,474,627
SHOCK-DAMPING VERGE PLATE
Kenneth Howle, Norristown, Pa., assignor to Wildman Mfg. Co., Norristown, Pa., a corporation of Pennsylvania
Application July 30, 1947, Serial No. 764,853
14 Claims. (Cl. 66—110)

1. A verge plate comprising a longitudinally-extending body portion having a longitudinal striking edge of hard material and having a longitudinally-extending groove behind its striking edge imparting springiness to said striking edge, and a rubber-like vibration damping insert positioned in said groove.

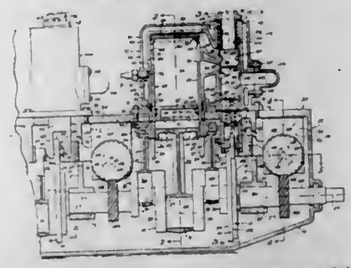
2,474,628
INDICATOR
Hyman Hurvitz, Washington, D. C.
Application May 20, 1948, Serial No. 28,222
8 Claims. (Cl. 315—9)

1. In combination, a cathode ray tube indicator having electron beam generating electrodes, electron beam deflecting electrodes, an electron beam intensity control electrode, and a fluorescent screen for providing visual indications in response to variations of intensity of said electron beam, during deflection thereof, and means responsive to said visual indications for regenerating said visual indications on said cathode ray tube indicator.



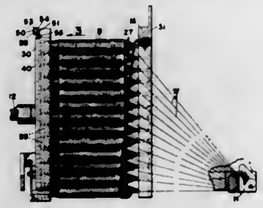
2,474,629
FASTENING MEANS FOR TROUSERS AND OTHER GARMENTS
Marcus Manly Isaacs, Sydney, New South Wales, Australia
Application January 10, 1946, Serial No. 640,210
In Australia January 11, 1945
4 Claims. (Cl. 2—237)

1. Fastening means for a garment having opposed flaps, including two pouches each having a closed bottom and an open mouth, said pouches being provided for securement to the opposed flaps of said garment with the open mouths oppositely and outwardly directed, a hook member, and an eye member, each of said members having a base formed with a tongue arranged in spaced juxtaposition to the base, said tongues being positioned outside said pouches and extending with their free ends toward each other when said bases are loosely inserted into said pouches, the hook member having its tongue provided with a hook adapted to engage an eye provided on the tongue of said eye member, said base members having a transverse width and end contour conforming to the width and bottom contour of the pouches, said base members being urged into engagement with the bottom of their respective pouches when said hook and eye are operatively connected with each other.



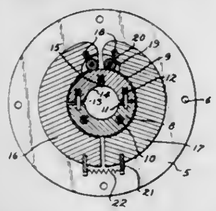
2,474,630
CONTROL MEANS FOR AIRPLANE LANDING GEAR FOR LANDING CROSS WIND
Charles R. Jamison, Morgantown, W. Va.
Application March 3, 1947, Serial No. 731,923
10 Claims. (Cl. 244—50)

1. Airplane landing gear, comprising laterally spaced main caster landing wheels, a caster nose wheel positioned forwardly of the landing wheels, a closed fluid line, two elements connected in series in the fluid line, each adjacent to a landing wheel and movable by movement of fluid in either direction in the line, means coupling each element with the adjacent landing wheel for movement with the castering movement of the adjacent wheel, a pair of elements connected in series in the fluid line adjacent to and on opposite sides of the nose wheel, means coupling the



last mentioned elements with the adjacent sides of the nose wheel for movement synchronously in the fluid line with castering movements of the nose wheel, and means interposed between the last mentioned elements for increasing the fluid pressure between and selectively against the last mentioned elements.

2,474,631
INTERNAL-COMBUSTION ENGINE
Cleveland H. Jelley, Detroit, Mich.
Application June 27, 1946, Serial No. 679,659
9 Claims. (Cl. 123—50)

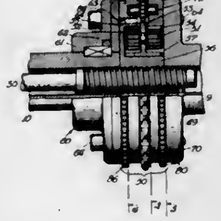


3. An internal combustion engine comprising a cylinder, a shaft, an outer piston reciprocable in said cylinder and having a longitudinal bore forming a combustion chamber, an inner piston reciprocable in said bore, said cylinder having a pre-compression chamber disposed outwardly of said outer cylinder, motion-converting mechanism operatively interconnecting said pistons and said shaft and arranged to convert the reciprocatory motions of said pistons into rotary motion of said shaft, a valve device having portions thereof arranged to control ports in said cylinder for supplying fuel to said combustion chamber and also for discharging the products of combustion of said fuel from said combustion chamber, a cam follower connected to said valve device, a cam device operatively connected to said shaft and having a plurality of adjacently disposed cam paths with portions thereof on the same level, and mechanism operable in timed relationship with said shaft for shifting said cam follower from one path to the other path, said motion-converting mechanism including a crank portion with a cheek on said shaft, and said cam paths being disposed on said cheek.

2,474,632
BOBBIN RETAINER FOR WEFT REPLENISHING MECHANISMS
Alexander C. Krukonis, Auburn, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application July 30, 1948, Serial No. 41,617
6 Claims. (Cl. 139—245)

1. In a reserve bobbin magazine having a wall forming part of a bobbin guideway in which reserve bobbins are stored, a bobbin stop secured to the wall at the top of the guideway and having a resilient arm normally inclined downwardly and away from the wall and overhanging part of a bobbin thereunder in the guideway, said arm being deflectable toward said wall by a bobbin being inserted into the guideway from above the latter, and said arm due to the resilience thereof returning to the normal position thereof.

2,474,633
AUTOMATIC LATHE CHUCK
James F. Marshall, Newton, Iowa
Application July 10, 1946, Serial No. 682,496
2 Claims. (Cl. 279—106)

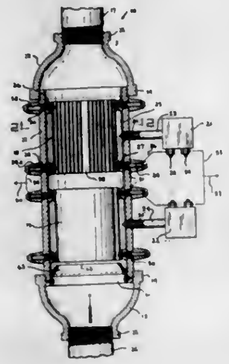


1. A lathe chuck comprising an attaching member, a pair of semi-circular jaws carried by said member, one jaw being fixed thereon and the other being movable toward the fixed jaw, a pair of rollers upon opposite sides of the transverse center of the movable jaw, and means responsive to centrifugal action to move said rollers circumferentially of the movable jaw tangentially thereof for moving the movable jaw toward the fixed jaw.

2,474,634
SURGICAL SPLINT FOR SMALL ANIMALS
Carl T. Mason, Little Rock, Ark.
Application March 30, 1948, Serial No. 17,975
1 Claim. (Cl. 128—89)

For use in a cast, a splint including a longitudinal section having arcuate walls and an integral dished portion, said dished portion adapted to accommodate the foot of an animal and the longitudinal section adapted to partially encircle a leg of an animal, the dished portion being disposed at an angle relative to the axis of the longitudinal section.

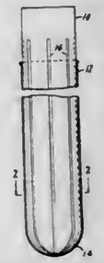
2,474,635
VARIABLE PITCH PROPELLER
Harry J. Nichols, New York, N. Y.
Application August 18, 1943, Serial No. 499,134
8 Claims. (Cl. 170—160.35)



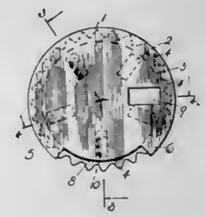
1. In mechanical operating mechanism for a variable pitch propeller mounted on a hollow propeller shaft driven by a drive shaft, combined coupling and pitch varying means including a ring member and a flange associated with a drive shaft and a second ring member and a flange associated with the propeller shaft, a plurality of bolts clamping said rings and flanges together so as to transmit driving torque from shaft to shaft, and planetary differential gearing housed within said ring members and flanges including a stationary gear forming part of one of the aforesaid rings, a rotary wheel carrying a plurality of planetary pinions meshing with said stationary gear and driven by transmission gearing external thereto, and a driven gear meshing with said planetary pinions whose hub constitutes the rotary nut member of a screw jack pair for varying the pitch of said propeller.

2,474,636
VITREOUS ENAMEL OPACIFICATION AND PROCESS
Henry Oesterle and Robert A. Oesterle, Belleville, Ill.
No Drawing. Application July 12, 1946, Serial No. 683,158
3 Claims. (Cl. 106—48)

1. In a process of making a vitreous enamel, the step of milling a zirconium type frit comprising 20% to 50% SiO_2, 5% to 20% ZrO_2, 5% to 15% B_2O_3, 5% to 20% Al_2O_3 and 5% to 20% F_2, percentages being by weight, together with from ½% to 8% of the weight of said frit of alpha alumina.



2,474,637
AUTOMATIC INSTANTANEOUS ELECTRIC WATER HEATER
John E. Pitts, Jr., Los Angeles, Calif.
Application September 18, 1945, Serial No. 617,071
10 Claims. (Cl. 219—39)

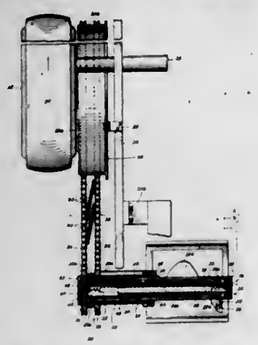


1. A water heater including a tube through which water is conducted, a plurality of spaced heating elements mounted therein, and an electric circuit in which each element is independently connected including independent pressure operated switches operatively exposed to the pressure of said water.

2,474,638
TESTING ELECTRODE
Carl J. Schmid, New York, N. Y., and William J. Koch, Midland Park, N. J., assignors to Julius Schmid, Inc., New York, N. Y., a corporation of New York
Application March 13, 1945, Serial No. 582,528
6 Claims. (Cl. 175—183)

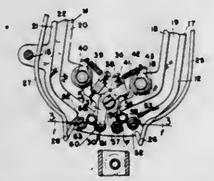
1. A mandrel for testing thin tubular rubber articles open at one end and closed at the other and adapted to snugly fit the mandrel without the entrapment of air between the mandrel and the article, said mandrel comprising an elongated cylindrical body of electrical conductive material having a series of passages in the surface thereof effectively connected for fluid flow communication and distributed over substantially the entire outer surface of said mandrel for permitting the escape or evacuation of air from between the mandrel and the article as the article is applied to the mandrel.

2,474,639
FLINT DISPENSER
Isidore Shprents, New York, N. Y.
Application August 1, 1947, Serial No. 765,377
2 Claims. (Cl. 206—42)



1. A dispenser for small objects such as flint, food or medicinal capsules, pills and the like comprising a base disc having pockets arranged in spaced relation to each other, the peripheral edge of said base disc having tooth-like projections thereon, a cover disc having an aperture therein positioned to coincide with the pockets in said base disc, the peripheral edge of said cover disc being shaped into a U-shaped channel member, said tooth-like edge of said base disc being adapted to rotate within said U-shaped channel member formed by the peripheral edge of said cover disc, and a section of said U-shaped channel member being cut away whereby said toothed edge of said base disc projects beyond said cover disc.

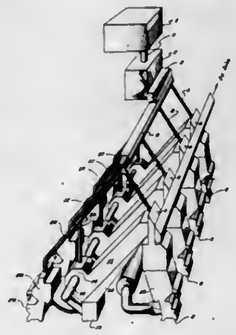
2,474,640
VEHICLE TRACTION DEVICE
George W. Smith, Jr., Greenwich, Conn., assignor of one-half to Eric W. Wood, Syosset, N. Y.
Application August 1, 1946, Serial No. 687,736
17 Claims. (Cl. 152—214)



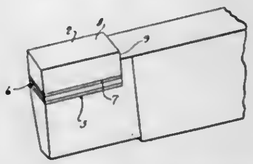
17. In a traction device for a vehicular wheel, an endless traction member, a guide member operatively associated with said traction member, a traction member support mounted alongside said wheel, means for moving said guide member whereby said traction member is alternatively

shifted off of said support member and over said wheel or off of said wheel and over said support

member, and means for controlling the tension of said traction member.



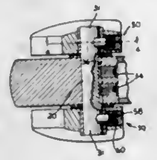
2,474,641
BOBBIN TIP SUPPORT MEANS FOR WEFT REPLENISHING LOOMS
Richard G. Turner, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application July 28, 1948, Serial No. 41,037
7 Claims. (Cl. 139—247)



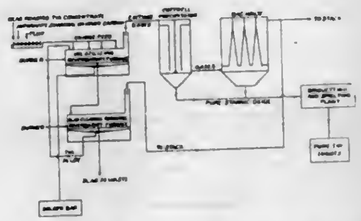
1. In a weft replenishing mechanism provided with a stack of bobbins which move down a guideway by gravity toward transfer position, a resiliently mounted bobbin tip support, a roll rotatably mounted on said support near the bottom of said guideway, and a second roll spaced from the first roll and rotatably mounted on the mechanism near the bottom of said guideway, the tip of the bottom bobbin of the stack resting on said rolls, the weft end of the bottom bobbin passing between said tip and one or the other of said rolls, and the latter being rotated by said tip at the time of bobbin transfer to prevent abrasion of said weft end.

2,474,642
SYSTEM FOR THE PREGINNING OF COTTON
Jeffrey J. Wallace, Amite, La., assignor to Gullett Gin Company, a corporation of Louisiana
Application June 18, 1946, Serial No. 677,545
5 Claims. (Cl. 19—67)

1. A system for the pre-ginning processing of cotton comprising a battery of a plurality of gins, a distributor for distributing cotton to each of the gins of said battery, an extractor and drier common to said gins anterior to said distributor discharging into said distributor, and a series of processing instrumentalities individual to each gin, between said distributor and gin through which cotton passes to the gin, said series including an extractor adjacent said gin, an intermediate group including a vacuum condenser and drum cleaner, and a group at the head of said series including an extractor and cleaner, a conduit for each gin at spaced points in the length of said distributor for supplying cotton to the gins, said conduit having branches communicating with said series respectively between said adjacent extractor and said intermediate group, between said intermediate group and head group, and anterior to said head group, and selectively operable means for determining the flow of cotton into any one of said branches whereby it is passed to said gin through said adjacent extractor only, serially through said intermediate group and said adjacent extractor, or serially through said head group, intermediate group, and adjacent extractor.



2,474,643
METHOD OF BRAZING CEMENTED CARBIDES TO STEEL
Clarence D. Webb, St. Clair Shores, Mich., assignor to Carboloy Company, Inc., a corporation of New York
Application June 4, 1947, Serial No. 752,469
9 Claims. (Cl. 76—101)



1. A method for brazing a cemented tungsten carbide body to a ferrous support comprising the steps of placing the cemented carbide body and a trimetal shim of two outer laminations of a silver base solder and an intermediate lamination of copper, upon the support with the shim between the support and the body and then heating the assembled body, shim and support to a temperature above the melting point of the silver base alloy and below the melting point of copper to bond the assembly together.

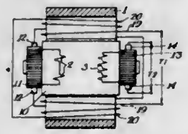
2,474,644
PIVOTAL MOUNTING MEANS FOR MICROSCOPE ARMS AND THE LIKE
Thomas G. Aitcheson, Kenmore, and Albin A. Gradisar, Buffalo, N. Y., assignors to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Application August 3, 1946, Serial No. 688,313
4 Claims. (Cl. 88—39)

1. In a microscope of the character described the combination of a base, a pair of spaced upstanding rigid projections carried thereby, a bracket arm positioned between said projections and arranged to support the body tube of the microscope on an upper portion thereof, and means for mounting said bracket arm for vertical tilting movement relative to said base and about a substantially horizontally disposed axis, said means comprising a shaft extending through aligned openings in said bracket arm and in said projections, means for fixedly securing said shaft in said arm for pivotal movement therewith, and friction means including a spring pressed brake element positioned in each of said projections and engaging spaced cylindrical end portions of said shaft and exerting a pressure in a direction offset relative to the longitudinal axis of said shaft so as to provide a resistance to rotation of said shaft in one direction and a greater resistance to the rotation thereof in the opposite direction.

2,474,645
PROCESS OF PRODUCING STANNIC OXIDE
Stanley M. Baxter, Burlington, Mass.
Application November 27, 1943, Serial No. 511,958
1 Claim. (Cl. 23—144)

The process of producing stannic oxide which consists in mixing solid carbon with a high iron subsilicate tin concentrate slag having a melting point of approximately 1000° C., heating said mixture to its melting point in a furnace having an oxidizing atmosphere, maintaining the proportion of carbon in the mixture to cause a dissociation pressure of the oxygen of the slag between approximately 1.3×10^{-15} and 7.95×10^{-13}, thus oxidizing the resultant metallic tin and reducing the stannic oxide to stannous oxide which being volatilized at the slag temperature bubbles through the slag and is instantaneously oxidized into stannic oxide by the atmosphere of the furnace, and recovering the stannic oxide so produced.

2,474,646
SPLIT STATOR
Grover F. Behringer, Defiance, Ohio, assignor to The American Steel Package Company, Defiance, Ohio, a corporation of Ohio
Application May 30, 1944, Serial No. 538,085
1 Claim. (Cl. 175—41.5)



A split condenser stator comprising a plurality of series of stator plates having recesses in their edges, and a common means for supporting all of said series of plates and insulating said series from each other, said means comprising a dielectric mounting plate for all of said series having notches in its edges receiving opposite side edges of the recesses in said stator plates, a plurality of spaced expandable retainer plates, one for each series of stator plates, said retainer plates having notches in their edges receiving opposite side edges of the recesses in said stator plates, said retainer plates being positioned in said recesses and being adapted to be expanded to grip the side edges of said recesses, and a reinforcing plate for each series of stator plates spaced from each other and being disposed in said recesses in the stator plate prior to the dielectric plate and said expandable plate, all three of said plates being tightly held in engagement with each other by said expandable plate.

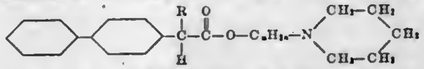
2,474,647
SPEED CONTROL OF DYNAMOELECTRIC MACHINES
Eric Alton Binney, Ilkley, England, assignor to The English Electric Company Limited, London, England, a British company
Application January 29, 1948, Serial No. 5,089
In Great Britain January 12, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires January 12, 1965
15 Claims. (Cl. 318—328)

2. A direct-current motor, comprising a multipolar field structure having an m-pole field winding and an n-pole field winding where m/n is an even number, an armature common to said two field windings and having an m-pole winding and an n-pole winding provided with two respective commutators each having a set of brushes, power input leads connected to the one set of brushes appertaining to said n-pole armature winding for supplying load current to the motor, said n-pole field winding being connected across said other set of brushes, and circuit means connected to said m-pole field winding and including adjusting means for supplying variable excitation to said latter winding in order to thereby control the motor speed.

2,474,648
DYNAMOELECTRIC MACHINE
Eric Alton Binney, Ilkley, England, assignor to The English Electric Company Limited, London, England, a British company
Application February 24, 1945, Serial No. 579,584
In Great Britain February 24, 1944
13 Claims. (Cl. 322—63)

1. A rotary direct current machine, comprising a normally unsaturated magnetic circuit including a multipolar field structure and an armature, said armature having a plurality of winding groups and a corresponding plurality of groups of commutator brushes connected with said respective winding groups, separately excitable field windings disposed on said field structure so as to cause—when the machine is operated as a generator—a voltage to be generated between a first group of said brushes, self-excitation field windings under control by said voltage and disposed on said field structure so as to cause—during generator operation—another voltage to be generated between another group of said brushes, and an external circuit connected to said other group of brushes.

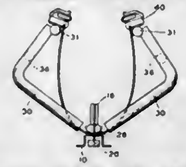
2,474,649
TREATMENT OF VEGETABLE TISSUE
Clarence Birdseye, Gloucester, Mass., assignor to Dehydration, Inc., Gloucester, Mass., a corporation of Massachusetts
No Drawing. Application June 21, 1944, Serial No. 541,459
10 Claims. (Cl. 99—221)



1. In the treatment of vegetable material, the step of blanching to inactivate the enzyme content of vegetable tissue without bringing extraneous water into contact with exposed tissue surface and without material loss of solubles from the tissue, which consists in heating the tissue in a high frequency electric field and in an atmosphere of predetermined humidity whereby moisture loss from the material may be controlled during the blanching process.

2,474,650
TREATMENT OF VEGETABLE TISSUE
Clarence Birdseye, Gloucester, Mass., assignor to Dehydration, Inc., Gloucester, Mass., a corporation of Massachusetts
No Drawing. Original application June 21, 1944, Serial No. 541,459. Divided and this application March 21, 1945, Serial No. 584,033
4 Claims. (Cl. 99—221)

1. In the preparation of vegetable tissue for further processing, the steps of heating the tissue in a high frequency electric field thereby blanching the tissue and inactivating its natural enzyme content without leaching action, simultaneously removing moisture from the blanched tissue by surrounding it with an arid atmosphere, coating the tissue with a solution containing a proteolytic enzyme and thereby causing the tissue to absorb the enzyme solution thus added, and then dehydrating the tissue.

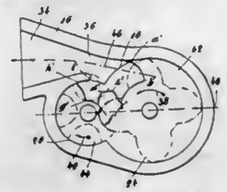


2,474,651
BASIC-ALKYL ESTERS AND THEIR SALTS
Frederick F. Blicke, Washtenaw County, Mich., assignor to Regents of the University of Michigan, Ann Arbor, Mich., a corporation of Michigan
No Drawing. Application February 26, 1944, Serial No. 524,084
8 Claims. (Cl. 260—294)

1. A compound selected from the group consisting of (a) basic-alkyl esters of the formula

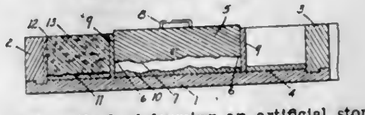
wherein R is selected from the group consisting of hydrogen and hydrocarbon radicals, and n is an integer from 2 to 4, inclusive, and (b) acid and quaterary ammonium addition salts thereof.

2,474,652
BENDING FRAMES PIVOTALLY CONNECTED BY STRETCH PRODUCING HINGES
Emil V. Block, Stratford, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application February 18, 1948, Serial No. 9,140
5 Claims. (Cl. 153—33)



1. In a jig for forming tapered airfoil structures from laminated sheet material having relatively sharp radii of bend, a longitudinal base, two tapered frames having double acting hinges connecting said frames to the base at each end of said base for displacing the pivotal centers at each end of said frames at different rates, means for securing the laminated material in said jig to said base along the bend axis, and means for maintaining the material of the sheet in the bend area under compression during bending including clamps for securing the longitudinal edges of said sheet to said frames.

5. In a hinge mechanism, a hinge support, two hinge plates, a pivot pin fixed to said support, links pivotally supported on said pin at their adjacent ends and pivotally connected with said plates at their remote ends, said plates having cam slots, and pivot pins passing through said slots and also fixed to said support, said slots having cam surfaces cooperating with said pins for moving said plates upwardly and outwardly when said plates are moved toward each other.

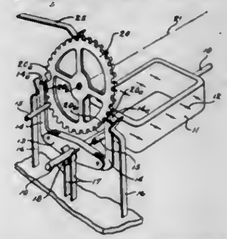


2,474,653
HELICAL GEAR COMPRESSOR OR MOTOR
Gustav Karl William Boestad, Lidingö, Sweden, assignor, by mesne assignments, to Jarvis C. Marble, New York, N. Y., Leslie M. Merrill, Westfield, N. J., and Percy H. Batten, Racine, Wis., as trustees
Application April 19, 1946, Serial No. 663,369
In Sweden April 26, 1945
14 Claims. (Cl. 230—143)

1. In a rotary device, a casing structure providing two parallel intersecting barrels and having inlet and outlet ports communicating with said barrels, a male rotor having helical lands and grooves the major portions of which lie outside the pitch circle of the rotor and mounted for rotation in a first one of said barrels, a female rotor having helical lands and grooves the major portions of which lie within the pitch circle of the rotor and mounted in a second one of said barrels

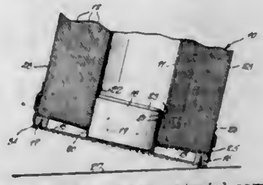
and intermeshing with said male rotor, a fluid conducting passage in said casing structure communicating with one of said ports and extending therefrom in a laterally inclined direction toward the side of said casing structure providing said second barrel and away from the plane common to the axes of said rotors.

2,474,654
METHOD OF MANUFACTURING ARTIFICIAL STONE WALLS
David F. Carlson, Gobles, Mich.
Application February 2, 1948, Serial No. 5,736
8 Claims. (Cl. 25—155)



8. The method of forming an artificial stone wall facing for a wall which comprises the steps of, laying out a frame corresponding to the outline of the wall to be faced on a base, spreading a layer of deformable plastic material within the outline of said frame, successively impressing a series of dies into said layer of material and pressing divider plates into said material along the edges of each of said dies, removing said dies, pouring concrete into the mold, permitting said concrete to set, and disassembling the slab elements thus cast.

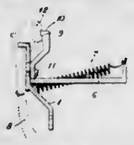
2,474,655
RETRACTABLE CLOTHESLINE HANGER
Guy B. Carroll, Minneapolis, Minn.
Application December 10, 1945, Serial No. 633,907
12 Claims. (Cl. 211—119.16)



6. In a hanger of the class described, a frame having means for attaching the same to a support, a pair of end brackets pivoted to the frame and suspended therefrom for lateral swinging movement in a vertical plane, a bar pivoted to the end brackets for endwise and upwardly swinging movement therewith, said bar having means for attaching a clothesline thereto, and a latch having a supporting shoulder pivoted on the hanger, gravity held in an operative position and provided with a depending cam-acting member in the path of movement of one of the end brackets when the bar is swung upwardly, whereby the engagement of the end bracket with the cam-acting member will move the latch into an operative position and hold the same until the bar has passed the same and engaged the supporting shoulder.

2,474,656
RATCHET MECHANISM
Walter B. Claus, Van Nuys, Calif., assignor, by mesne assignments, to Howe & Fant, Inc., South Norwalk, Conn., a corporation of Delaware
Application October 29, 1945, Serial No. 625,257
4 Claims. (Cl. 74—142)

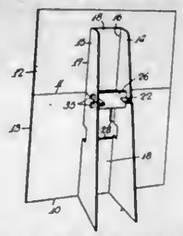
1. A ratchet mechanism comprising a rotatable toothed wheel, a pawl carrying arm pivoted centrally on an axis parallel to the axis of rotation of the wheel and located to one side of the wheel, a pair of pawls pivoted to the opposite ends of the arm, the pawls extending parallel and substantially tangent to the wheel and with their free ends lying close to respective teeth on the wheel, when the arm is at rest and lies normal to a line connecting the axes of the wheel and arm, and means engaging the pawls between their ends and guiding the pawls to move non-tangentially to the wheel, as the arm is swung on its pivot.



2,474,657
ROLL PACKAGING MEANS
Ralph Corson, Arlington, N. J., assignor to Congoleum-Nairn Inc., a corporation of New York
Application January 9, 1948, Serial No. 1,360
10 Claims. (Cl. 206—59)

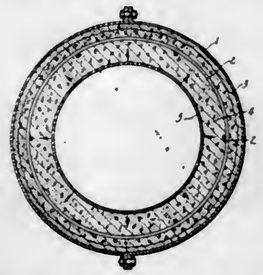
1. Packaged rolled sheet material comprising a roll of sheet material wound about a central tube, and shock absorbing means at least at one end thereof, said shock absorbing means comprising a centrally apertured load-carrying disk which is arranged to support the edges of the plies of the rolled sheet material at said end, a cover disk spaced from said centrally apertured load-carrying disk, an annular spacer maintained between said load-carrying disk and said cover disk adjacent the peripheries thereof and supporting said

load-carrying disk adjacent the outer plies of said rolled sheet material, the inner portion of said load-carrying disk being unsupported against bending, a plug secured to the inner side of said cover disk and extending through the aperture in said load-carrying disk and into said tube, and means for securing said shock absorbing means to said rolled sheet material at said end thereof, said load-carrying disk being adapted to support the load normally imposed thereon by the edges of the plies of said rolled sheet material while being yieldable to permit substantial bending thereof inwardly from said annular spacer to accommodate relative displacement of said plies longitudinally of said rolled sheet material when said end of said packaged rolled sheet material is subjected to impact.



2,474,658
TYPE PALLET ALIGNING JIG
Gilbert Garvin Dorr, Nashville, Tenn., assignor to American Telephone and Telegraph Company, a corporation of New York
Application July 6, 1946, Serial No. 681,747
5 Claims. (Cl. 113—99)

3. A jig for aligning a group of the type-pallets of a typewriter, each of the said pallets having thereon two characters which are spaced apart; the distance between the lower edge of the upper character and the upper edge of the lower character being the same for all of a given group of pallets, the said jig being adapted to be fastened to the type-bar guide of the typewriter, the jig having a curved face portion simulating a section of the platen of the typewriter with which the pallet is designed to coact, the face portion having an extension at its upper end which projects towards the front of the typewriter and makes the same angle with the face of the jig as does the upper surface of the lower-case type on the pallet, the vertical thickness of the extension being such as to fit snugly between the upper-case and the lower-case characters upon all type-pallets of the said group.

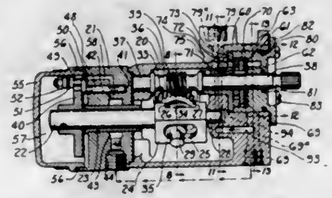


2,474,659
FOLDABLE DISPLAY DEVICE AND EASEL
Ludwig Ebert, New York, N. Y., assignor to Einson-Freeman Co., Inc., Long Island City, N. Y., a corporation of Delaware
Application January 4, 1947, Serial No. 720,249
8 Claims. (Cl. 248—35)

1. In a display device, a panel foldable forwardly along a line substantially parallel to its bottom edge, and a collapsible easel secured to its rear surface and comprising: an attachment section having portions adhesively secured to the panel both above and below said fold line, a wing hinged to said attachment section and adapted to swing either flatwise against said panel or rearwardly into a propping position, said wing extending across said fold line and being provided with a pleat at the level of said fold line to permit forward folding of the easel along with said panel when the wing is flat against the panel, a bracing flap carried by the attachment section of the easel and provided with a notch adapted to engage frictionally with said pleat when the wing is in propping position, and an

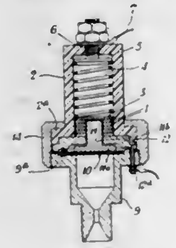
additional releasable tongue-and-slot engagement between said bracing flap and said wing.

2,474,660
MANUFACTURE OF PRESTRESSED CONCRETE PIPE AND THE LIKE
Frank Lionel Fitzpatrick, East Malvern, Victoria, Australia, assignor to Rocla Limited, Springvale, Victoria, Australia, a company of Australia
Application July 19, 1947, Serial No. 762,216
In Australia August 19, 1946
4 Claims. (Cl. 25—154)



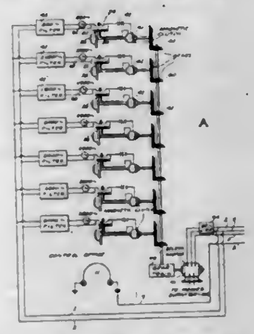
1. The manufacture of a prestressed reinforced concrete pipe, or like prestressed reinforced concrete article having a cylindrical or substantially cylindrical inner cavity, comprising inserting the reinforcement in a mould, lining the inner surface of the mould with a layer of compressible material (which ultimately becomes incorporated in and forms the outer layer of the pipe or like article), forming therein by the rotary process the main body of a reinforced concrete pipe, or like reinforced concrete article having a cylindrical or substantially cylindrical inner cavity, and subsequently subjecting the said pipe or like article to outwardly directed pressure, so that the said compressible material yields sufficiently to permit of the distension of the main body of the said pipe or like article.

2,474,661
LUBRICATING DEVICE
Bengt E. Folke, Mamaroneck, and Ralph H. Shepard, New York, N. Y., assignors to Nathan Manufacturing Company, New York, N. Y., a corporation of New York
Application March 28, 1945, Serial No. 585,328
8 Claims. (Cl. 184—27)



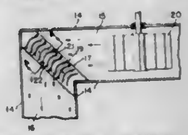
1. In a lubricating device, a housing, a block secured to the housing having an inlet and a plurality of outlets for a lubricant, mechanical

lubricator mechanism comprising a plurality of force feed units of the piston type in said block, each unit adapted to draw in the lubricant through said inlet and discharge it from one of said outlets, operating means for said force feed units, a drive shaft for said operating means supported within the housing, at least one of said force feed units adapted to discharge a lubricant into the housing for said drive shaft and associ-



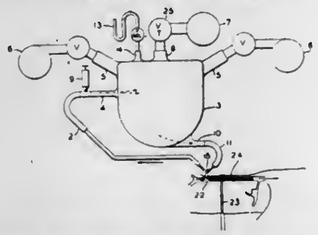
ated parts, a supply rotor and a return rotor secured to said drive shaft, said housing having an inlet and an outlet for each of said rotors, said supply rotor delivering oil to the inlet of said block, said return rotor and its inlet and outlet in the housing forming a return line, and means adapted to discharge excess oil between the supply rotor and the block inlet into said return line.

2,474,662
ELECTRIC PRESSURE INDICATOR
Reginald Cyril Fuller, Brighton, England
Application June 21, 1946, Serial No. 678,261
In Great Britain December 19, 1945
3 Claims. (Cl. 201—51)



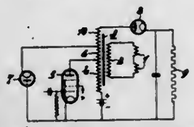
1. A fluid pressure operated electrical switch comprising a housing, an imperforated diaphragm therein exposed wholly on one side, with the exception of its clamped periphery to the influence of the fluid pressure to deform it to actuate the switch, switch contacts isolated from the diaphragm, resilient means actuating the contacts in one direction and yieldingly opposing said deformation of the diaphragm, said resilient means comprising an adjustable spring, stop means separate from the diaphragm preventing transmission of any, or any but a relatively very small portion of the load of said adjustable spring to the diaphragm when the fluid pressure falls below the effective load of the spring, and an overload preventing member forming a positive stop against excessive deformation of the diaphragm beyond that produced by a predetermined minimum of the range of fluid pressure to which the switch is to respond.

2,474,663
REMOTE-CONTROL SYSTEM FOR SELECTIVELY CONTROLLING A PLURALITY OF ADJUSTABLE ELEMENTS
De Witt Rugg Goddard, Riverhead, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application December 11, 1944, Serial No. 567,732
16 Claims. (Cl. 250—40)



1. In a remote control system, a control office, a radio receiver remotely located with respect to said control office, a multi-conductor cable connecting said control office and radio receiver, said receiver having a plurality of control shafts coupled to different tuning elements of the vacuum tube stages of said receiver, a motor, individual magnetic clutches and gears linking said control shafts to said motor, said clutches being so constructed and arranged that said shafts are operatively linked to said motor only upon energization of said clutches, and means for selectively energizing said clutches to thereby link a desired control shaft to said motor.

2,474,664
ELECTRIC HEATING SYSTEM
Walter G. Grabeau, West Roxbury, Mass.
Application May 15, 1946, Serial No. 669,775
6 Claims. (Cl. 219—39)

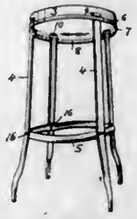


1. An electric heating system comprising in combination, a structure having two angularly related ducts, an electrically heatable unit located at the juncture of said ducts, said unit comprising a strip of high resistance metal curvilinear in cross section and reversely bent repeatedly upon itself to form a plurality of curvilinear spaced vanes defining passages therebetween, the forward end of each said vane being substantially parallel to the axis of one of said ducts and the trailing end of each said vane being substantially parallel to the axis of the other of said ducts, insulation means for securing said unit in said ducts at the juncture thereof and at an angle to the axes of said ducts, said unit being coextensive with the area of said juncture, and means adapted to connect said unit to a source of electric power.

2,474,665
PNEUMATIC BLOOD TREATING APPARATUS
John R. Guarino, Brooklyn, N. Y., assignor of one-fourth to Frank J. Guarino, one-fourth to Vincent T. Guarino, and one-fourth to Louis J. Guarino, all of Brooklyn, N. Y.
Application February 26, 1946, Serial No. 650,224
7 Claims. (Cl. 128—214)

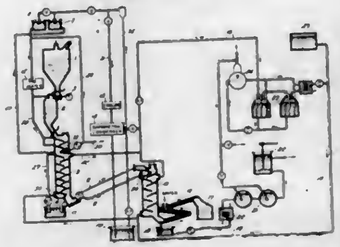
5. The combination of an enclosed container, a discharge conduit in communication with the lower end of said container, a supply conduit in communication with said container above the lower end thereof and below the upper end thereof, the free ends of said conduits connected to the blood stream of a subject to by-pass blood from the subject through the supply conduit, container and discharge conduit, back to the subject, relying in part upon the propogating force of the heart of the subject to effect the flow of the blood through the container, and a supply of an extraneous gas under pressure in excess of the pressure of the gas in the blood entering through the supply conduit, the upper end of the container above the surface of the blood being closed and containing, and being in communication with said supply of an extraneous gas to supplement the heart in effecting the flow of the blood from the subject through the container and back to the subject.

2,474,666
CIRCUIT ARRANGEMENT FOR PRODUCING A SAW-TOOTH CURRENT IN THE DEFLECTION COIL OF A CATHODE-RAY TUBE AND FOR PRODUCING A DIRECT VOLTAGE FOR THIS TUBE
Johan Haantjes and Bernardus Willem van Ingen Schenau, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application March 26, 1948, Serial No. 17,156
In the Netherlands April 21, 1947
1 Claim. (Cl. 315—27)



A circuit-arrangement for producing a sawtooth current in a deflection coil of a cathode-ray tube, which coil is connected to the secondary winding of a transformer, part of the primary winding of this transformer being connected into the anode circuit of a discharge tube to which a sawtooth voltage is supplied and with which anode circuit a diode is connected in parallel in such manner that the diode is conductive during the up-stroke of the sawtooth current, in which arrangement, moreover, the voltage pulses set up throughout the primary winding of the transformer are rectified for producing a direct voltage feeding a cathode-ray tube, characterized in that the transformer comprises a core of magnetic material on which is provided the secondary transformer winding which extends only over part of the length of the core and on the outside of which is provided the primary low-capacity winding which extends over a greater length than the secondary winding, the location of the secondary winding with respect to the separation between the primary winding part included in the diode circuit and the part not included therein being chosen to be such that the inductive coupling of the secondary winding with the spreading inductance of these two parts is zero or substantially zero.

2,474,667
SPEEDBOAT HULL
Robert L. Harvey, Detroit, Mich.
Application June 30, 1945, Serial No. 602,525
4 Claims. (Cl. 114—66.5)



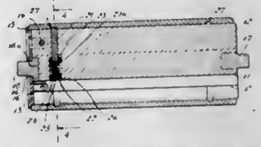
1. A boat hull having a keel fin extending longitudinally substantially from the bow to the stern and having a step disposed nearer to the bow than to the stern, said bow having complementary concavities on opposite sides of the keel and extending aft from substantially the bow to the step and increasing in width from the bow to the step and terminating laterally in chines dropped vertically below the bottoms of the concavities intermediate the keel and the chines, and terminating laterally adjacent to the step in complementary substantially horizontal stabilizer planes spaced on opposite sides from the keel fin by the width of the concavities and dropped below the bottoms of the concavities intermediate the keel and said planes, the bottom of the hull abaft the step and on opposite sides of the keel fin consisting of two complementary substantially horizontal plane surfaces said complementary plane surfaces merging substantially flush with the bottoms of the concavities adjacent to the keel on a line with the step, said keel fin having a depth forwardly of the step greater than its depth aft of the step.

2,474,668
FURNITURE
Roger C. Herbolsheimer, Garrett, Ind.
Application January 9, 1947, Serial No. 720,976
5 Claims. (Cl. 155—196)

1. In a stool structure, a seat having a peripheral downturned flange provided with inset portions constituting stirrups and an interior annular channel in its lower part, legs supporting said seat, the upper end portion of each leg having side flanges providing stops, a tongue extending upwardly beyond the stops, and an exterior transverse bead located below said stops, the arrangement being such that when the tongue is inserted into a corresponding stirrup the stops bear against the lower edge thereof and the bead projects into said channel, thus establishing an interlocking connection between the seat and leg, and a brace secured in connection with the legs to spread the lower parts thereof and cause binding of said interlocking connections.

2,474,669
CELLULOSE SACCHARIFICATION
André Héreng, Paris, France
Application September 17, 1945, Serial No. 616,831
In France September 22, 1944
2 Claims. (Cl. 127—37)

1. A continuous method of extracting the pentoses and hexoses from comminuted wood comprising the following steps: impregnating the wood by treating it with heated liquid hydrochloric acid of 27–33% concentration for 30 to 45 minutes, thereafter treating the wood with fresh liquid acid, extracting pentose containing liquid and treating the wood therewith at an earlier stage, subjecting the impregnated material to a countercurrent of gaseous hydrochloric acid at atmospheric pressure, thereby raising the strength of the acid absorbed in the wood to 41%, drying the material with a current of anhydrous gaseous hydrochloric acid at less than 30° C., thereby reducing the acid absorbed in the wood to not over 2%, washing the lignin hexose mixture remaining after the last step, to extract hexoses, drying the remaining lignin, absorbing the pentose liquid previously collected with the lignin, extracting the pentoses by drying the lignin pentose mixture with a current of anhydrous gaseous hydrochloric acid at less than 30° C. and washing the lignin pentose to obtain the pentoses.



2,474,670
PRODUCTION OF PROPYLENE POLYMERS
Arthur B. Hersberger, Drexel Hill, and Randall G. Heiligmann, Yeadon, Pa., assignors to The Atlantic Refining Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application March 6, 1946, Serial No. 652,492
3 Claims. (Cl. 260—94)

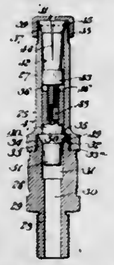
1. A method for polymerizing propylene, which comprises cooling a solution of propylene in a cycloparaffin to a temperature between —20° C. and —100° C., the ratio of cycloparaffin to propylene being between 1:1 and 10:1 and the cycloparaffin being liquid at the temperature aforesaid, intimately contacting the propylene-cycloparaffin solution at —20° C. to —100° C. with a solution of 1% to 4% of $AlCl_3$ in an alkyl halide containing not more than 3 carbon atoms for sufficient time to effect polymerization, the quantity of $AlCl_3$ solution being about 10% by volume of the propylene and separating the propylene polymer from the polymerization mixture.

2,474,671
POLYMERIZATION OF OLEFINIC HYDROCARBONS WITH FRIEDEL-CRAFTS CATALYSTS
Arthur B. Hersberger, Drexel Hill, Pa., assignor to The Atlantic Refining Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application April 29, 1947, Serial No. 744,798
8 Claims. (Cl. 260—85.3)

1. In a process for producing polymers from olefinic hydrocarbons containing at least 4 carbon atoms polymerizable by a Friedel-Crafts catalyst, the improvement which comprises providing an intimate mixture of finely divided solid particles of said olefinic hydrocarbon, Friedel-Crafts catalyst, and an inert solvent, and thereafter causing melting of a small portion of said mixture, the ensuing reaction being characterized in that the heat of reaction is substantially counterbalanced by the heat of fusion of the reaction mixture, such counterbalance being achieved by regulating the amount of inert solvent employed in the initial reaction mixture.

2,474,672
MANDREL
Earl G. Hill, Pulaski, Va., assignor to Textile Appliance Corporation, New York, N. Y., a corporation of New York
Application June 4, 1947, Serial No. 752,409
4 Claims. (Cl. 242—130)

1. A mandrel for supporting a core upon which a strand is to be wound, which comprises a bar of Y-section, a cap at one end of the bar and of greater diameter than the cylinder described by rotation of the bar on its axis, tongues extending from the cap and lying against the legs of the bar and secured thereto, a pair of gudgeons mounted on the bar in the axis thereof at opposite ends of the bar, one of the gudgeons projecting beyond the cap, and a spring-pressed detent mounted on the bar and normally extending beyond the outer face of one leg thereof.



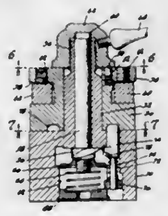
2,474,673
NOZZLE AND TIP FOR BURNING AND WELDING TORCHES
Alva K. Hinchman, Bryn Mawr, Pa.
Application March 31, 1944, Serial No. 528,987
3 Claims. (Cl. 158—27.4)

1. A nozzle for gas burning apparatus comprising a head section provided with a bore there-

beam, and means, forming part of said transmitting means for adjusting the position of said in-

erage direct current in one direction, and an electron tube connected in parallel with said recti-

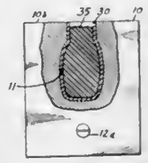
through from an outer end to an inner end thereof, an outwardly flared tapered interior seat at the outer end of said head section, means forming a socket at the inner end of said head section and larger than the bore, a shoulder within said socket, a tubular sleeve having a tapered outer end to fit the tapered seat and provided with a plurality of slits crosswise of said sleeve



and extending longitudinally thereof for a predetermined distance from said outer end to produce segments, hollow means having threaded engagement with the sleeve and engaging the shoulder to pull said sleeve inwardly when the hollow means is rotated in one direction, and a body section having a bore therethrough from end to end thereof and detachably connected to the inner end of the head section.

2,474,674
SALT BATH FOR TREATING STAINLESS STEEL PRODUCTS
Artemas F. Holden, New Haven, Conn.
No Drawing. Application September 4, 1944, Serial No. 552,713
3 Claims. (Cl. 148—15)

1. The method of heat treating parts of stainless steel of the 18% chrome-8% nickel type having surface scale, fluxes, oxides, paint or the like to clean and anneal the same and produce a non-oxide bright finish thereon, comprising: heating the workpieces in a No. 1 liquid salt bath operated at a temperature from 1850° F. to 1950° F., the No. 1 bath being barium chloride 80% to 90%, potassium chloride 4% to 7%, barium fluoride 2% to 5%, and calcium fluoride 4% to 10%; retaining the parts in the No. 1 bath until the parts are heated to the temperature of the No. 1 bath; transferring the parts from the No. 1 bath to a No. 2 bath in a metallic pot and without substantial loss of temperature to the parts during said transfer, said No. 2 bath being sodium hydroxide 30% to 65%, potassium hydroxide 30% to 65%, and sodium cyanide 2% to 10%, and the No. 2 bath being operated at a temperature from 600° F. to 900° F.; retaining the parts in the No. 2 bath until the parts have acquired the temperature of the No. 2 bath; and quenching the parts to atmospheric temperature.

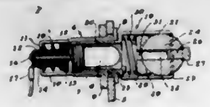


2,474,675
TOOLHOLDER
Vladimir Jankowski, Detroit, Mich.
Application November 24, 1944, Serial No. 564,959
4 Claims. (Cl. 29—49)

1. In a tool holder, a base provided with an upright tubular cylindrical column, a turret rotatably mounted upon the column superimposing the base, a handle rotatably mounted upon the column superimposing the turret, means operable to automatically couple the turret with the handle to rotate therewith in one direction of rotation of the handle and to permit the handle to rotate independently of the turret in the opposite direction of rotation of the handle, a locking pin spring urged to lock the turret to the base against rotation, a cam rod extending rotatably and axially shiftably through the tubular column and coupled at one end with the han-

die for rotation thereby at axially shifted positions of the rod, said rod provided at the opposite end with a cam operable in one direction of rotation to engage the locking pin and shift it axially to release the turret from the base and operable in the opposite direction of rotation to engage the locking pin without actuating it and to itself shift axially as it travels over the locking pin.

2,474,676
METHOD OF FORMING ARTIFICIAL TEETH
Ernest Byron Kelly, Chicago, Ill., assignor to Myerson Tooth Corporation, Cambridge, Mass., a corporation of Massachusetts
Application February 27, 1946, Serial No. 650,573
6 Claims. (Cl. 18—55.1)

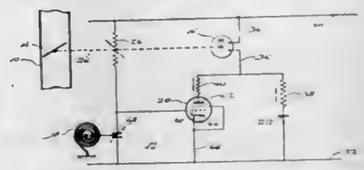


1. A method of forming a plastic tooth, which comprises providing a thimble-shaped blank of plastic resinous material, nesting within said blank a tubular blank of plastic resinous material, providing a layer of cementing material between the nested blanks, inserting the nested blank assembly into a mold cavity, admitting a gaseous medium under pressure into said blank assembly to expand the same to form a shell conforming with the shape and dimensions of said mold cavity, and filling the resulting shell with resinous material.

2,474,677
DIMMER DEVICE FOR INDICATING LAMPS
Harold R. Kirkland, Morristown, N. J.
Application April 18, 1944, Serial No. 531,567
6 Claims. (Cl. 177—329)

1. In a dimmer device of the character described, means to interrupt the transmission of a beam of light, means forming part of said interrupting means for transmitting light from said

beam, and means, forming part of said transmitting means, for adjusting the position of said in-

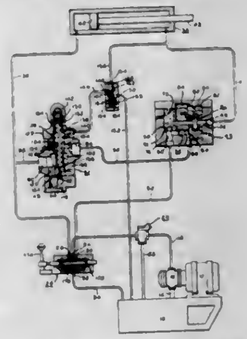


terrupting means, to vary the amount of light passed therethrough.

2,474,678
SELF-CLEANING SALT OR PEPPER SHAKER OR DISPENSER
Darley E. Kitchen, Logan, Ohio
Application February 6, 1946, Serial No. 645,751
2 Claims. (Cl. 65—57)

1. A salt and pepper shaker comprising a container having separable sections, one of said sections having an end portion provided with openings defining a pattern through which the contents may be dispensed, and another of said sections having an end portion defining a base for the shaker, and at least several vertically disposed pins arranged in a pattern corresponding to said first named pattern, said pins having smaller diameters than said openings and rigidly mounted on the outside of said latter end portion and out of contact with the contents of the container for clearing said openings when they become clogged.

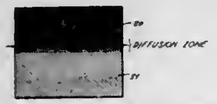
2,474,679
ELECTRIC MOTOR CONTROL PROPORTIONING SYSTEM
Charles W. Klug, Chicago, Ill., assignor to Stewart Warner Corporation, Chicago, Ill., a corporation of Virginia
Application June 19, 1944, Serial No. 541,011
1 Claim. (Cl. 318—28)



A control for controlling variable output condition changing means in response to the deviation of the condition from a predetermined value, including in combination, means controlling the output of the condition changing means, a reversible variable torque direct current electric motor for operating said controlling means, condition responsive means, and balanced means controlled by said condition responsive means and motor for varying the average torque and direction of torque exerted by said motor means in proportion to the deviation of the condition from the predetermined value, said last mentioned means including a source of alternating current, a rectifier connecting said motor across said source to provide said motor with a constant average direct current in one direction, and an electron tube connected in parallel with said rectifier and having a variable current output also connecting said motor across said source, said electron tube having a control grid, means including variable phase shifting means connecting said grid to said alternating current source such that the average direct current flow through said electron tube is determined by the phase relationship of said grid to said alternating current source, said variable phase shifting means being connected to be varied by said condition responsive means and said motor so that phase shifts in one direction caused by changes in the condition responsive means are balanced by equal and opposite phase shifts due to movement of said motor and controlling means to a new position where the output controlled by said controlling means balances the anticipated required output.

2,474,680
METHOD OF RECTIFYING A NEUTRAL MOLTEN SALT TREATING BATH
Paul H. Kramer, Detroit, Mich., assignor to Park Chemical Company, Detroit, Mich., a corporation of Michigan
No Drawing. Application March 23, 1945, Serial No. 584,490
2 Claims. (Cl. 252—75)

1. The method of rectifying a neutral molten salt heat treating bath containing undesirable oxides which includes injecting in a gaseous state into the bath while it is in a heat treating pot a methyl halide of the halide group consisting of chlorine, fluorine, bromine.

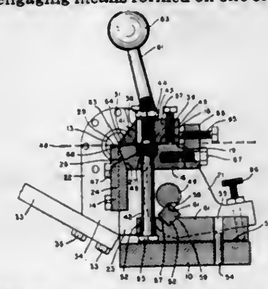


2,474,681
FLOW CONTROL CIRCUIT
Albert M. Lane, Detroit, Mich., assignor to Vickers Incorporated, Detroit, Mich., a corporation of Michigan
Application June 18, 1945, Serial No. 600,003
8 Claims. (Cl. 60—52)

1. In a hydraulic power transmission system, the combination of a fluid pump, a reciprocable fluid motor, a directional control valve for selectively directing fluid to the motor in one direction or the other, a flow-regulating valve for controlling the speed of the motor and including in series in such valve an adjustable throttle through which fluid is adapted to flow at a regulated rate and a compensating valve of the type which is normally open when flow through the flow-regulating valve is interrupted and responsive to the

pressure drop across the throttle for maintaining such pressure drop substantially constant, and a pilot circuit comprising a first means connected to a source of pressure fluid in the system and to the flow-regulating valve and a second means for controlling the operation of the first means and causing the first means to be operative to provide a source of low pressure fluid closing the compensating valve just before the motor is started in a regulated movement and causing the first means to be inoperative when flow to the flow-regulating valve resumes to permit the compensating valve to assume normal regulating position.

2,474,682
COMPOSITE STEEL PLATE
Benjamin Liebowitz, Lewisboro, N. Y.
Original application May 21, 1941, Serial No. 394,508. Divided and this application July 5, 1947, Serial No. 759,119
1 Claim. (Cl. 29—196.1)



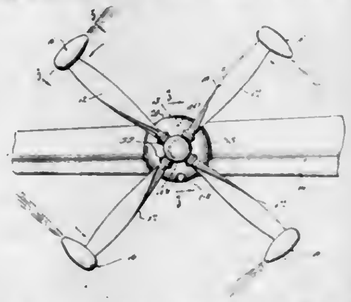
A welded composite plate comprising at least one pair of steel plates consisting of one plate of soft steel and another plate of hard steel having a substantially higher carbon content than the carbon content of the soft steel, said plates being welded together at their common interface and there being a carbon diffusion zone of material thickness in said region of said interface which is substantially uniform laterally and in which the carbon content varies from its concentration in the body portion of the hard steel plate to its concentration in the body portion of the soft steel plate and decreases in its concentration continuously from the interface extending into the soft steel plate thereby providing a weld having approximately the strength of the steel in the hard steel plate, the metal of said plates in the region of said interface being substantially free of impurities other than impurities in the metal of said respective plates and there being no intermingling of the metals as such of said respective plates at said interface as distinguished from said carbon diffusion extending from the metal of said hard steel plate into the metal of said soft steel plate, and there being relatively little diffusion in the region of said interface of alloying elements other than carbon.

2,474,683
BENDING BRAKE WITH ADJUSTABLE WORK STOP AND CLAMPING MEANS
Victor F. Linder, Minneapolis, Minn., assignor to Albert T. O'Neil, Minneapolis, Minn.
Application April 22, 1946, Serial No. 663,884
9 Claims. (Cl. 153—16)

1. In a metal brake, a bed, a jaw overlying said bed, a lever supported for swinging movement relative to said bed, connecting means between said lever and jaw, a rock shaft disposed in spaced relation to said lever a second lever secured to said rock shaft for rocking the same, said shaft having an eccentrically disposed bearing therein and said lever having a bearing facing the bearing in said shaft, a thrust member extending between said shafts and lever and having portions engaging said bearings, said shaft, upon rocking movement, swinging said lever to cause relative movement between said jaw and bed.

6. In a metal brake, a support, a bed carried thereby, means for clamping the work on said bed and including a rock shaft, a bender, a stop pivoted on said rock shaft and including two arms, engaging means formed on one of said arms,

an engaging member carried by said bender and adapted to engage the engaging means of the stop, and a screw carried by said second arm and engaging said support for limiting the movement of said stop about said shaft.

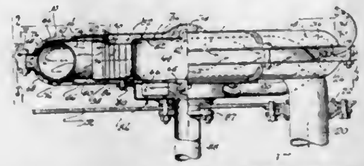


2,474,684
TOOTH CLEANING DEVICE
Michael J. McCaughley, Brooklyn, N. Y.
Application July 21, 1945, Serial No. 606,377
4 Claims. (Cl. 15—172)

1. In a tooth cleaning device, the combination of a chambered support, an elongated shank mounted for longitudinal movement in said support, a control sleeve screw-threadedly connected to said shank securely to anchor the shank and adjust the position of the same, there being openings in said support to position said sleeve and afford access to the same, a chambered holder pivotally connected to one end of said support and to one end of said shank, the pivotal connections between said holder on the one hand and said handle and shank on the other hand being spaced from one another so that longitudinal movement of said shank relative to said support will vary the angular relationship of said holder to said support, and a tooth cleaning device removably mounted in the chamber of said holder.

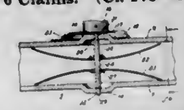
2,474,685
JET PROPULSION APPARATUS
Henry J. De N. McCollum, deceased, late of Chicago, Ill., by Thelma McCollum, executrix, Chicago, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application April 12, 1945, Serial No. 587,929
1 Claim. (Cl. 170—135.4)

An aircraft power plant comprising a rotatable hollow propeller, a rotatable propeller shaft connected to the center of said propeller, said shaft being hollow and communicating with the hollow space in said propeller, means forming jet producing combustion chambers at the tips of said propeller communicating with the hollow space in said propeller and adapted to drive said propeller by reaction, means for forming a combustible mixture of fuel and air and for introducing said mixture under pressure into said



hollow propeller shaft, means for igniting said mixture in said combustion chambers, mechanism associated with the central portion of said propeller for feathering the propeller blades and thereby pointing said reaction jets in a rearward direction, detent means associated with said hollow propeller shaft and adapted when actuated to locate and lock said shaft immovable with said jets operating clear of the aircraft structure.

2,474,686
ALLYL DIGLYCOLYL ALLYL GLYCOLATE
Harry T. Neher, Bristol, Edwin H. Kroeker, Cheltenham, and Willard J. Croxall, Bryn Athyn, Pa., assignors to Rohm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application September 4, 1947, Serial No. 772,216
1 Claim. (Cl. 260—78.3)

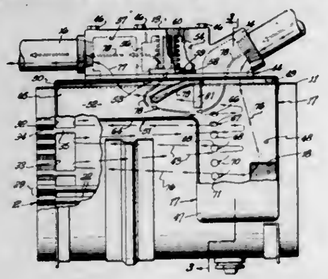


A copolymer from 60 to 75 parts of allyl diglycolyl allyl glycolate and 40 to 25 parts of methyl methacrylate.

2,474,687
COMPACT FORCED-AIR HEATER
William C. Parrish, Park Ridge, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application July 7, 1944, Serial No. 543,822
3 Claims. (Cl. 126—110)

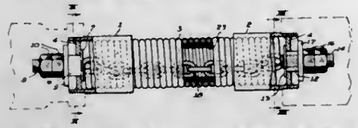
1. An internal combustion heater comprising in combination means forming a tubular arcuate C-shaped combination combustion chamber and heat exchanger, said C-shaped heat exchanger having an exhaust opening at one tip thereof, wall forming means sealing the opposite tip of said C-shaped combination combustion chamber and heat exchanger, said combustion chamber being located adjacent said wall forming means, a burner located in said combustion chamber adjacent said wall forming means, means including an inlet duct for supplying combustion air to said burner, means for supplying fuel to said burner, a removable igniter supported by said wall forming means, said combination combustion chamber and heat exchanger defining a closed arcuate shaped passageway from said burner to said exhaust outlet for the arcuate flow of burning gases and the products of combustion, power means located centrally with respect to said combination combustion chamber and heat exchanger and extending into the space encircled thereby, ventilating air circulating means axially disposed with respect to said power means and connected on one side thereof to be driven thereby, a combustion air circulating means on the other side of said power means and connected to be driven thereby for causing combustion air to flow through said inlet duct to said burner and said combustion chamber, and a generally circular housing enclosing said combination combustion chamber and heat exchanger, said power means, said ventilating air circulating means and said combustion air circulating means, said housing having an axially disposed inlet adjacent said ventilating air circulating means through which ventilating air is drawn and having a peripheral outlet adjacent and substantially coextensive of said combined combustion chamber and heat exchanger, said housing including means for directing cool ventilating air around said power means and against said combined combustion chamber and heat exchanger and warm ventilating air outwardly through said peripheral outlet.

2,474,688
TRANSMISSION CONTROLLING DEVICE FOR WAVE GUIDES
Reginald M. Pease, Jersey City, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application June 6, 1945, Serial No. 597,781
6 Claims. (Cl. 178—44)



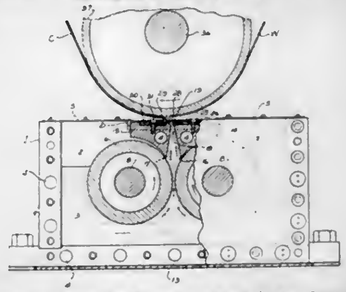
6. In combination, a hollow section of wave guide of rectangular cross-section having unequal cross-sectional dimensions and means for adjusting only the shorter cross-sectional dimension thereof to control the transmission of wave energy therethrough, said means comprising an arcuate strip of spring metal positioned within said section perpendicular to and extending between the shorter sides thereof and having its ends in contact with one of the longer sides thereof, and means for adjusting the minimum distance between said strip and the other longer side of said section.

2,474,689
OIL COOLER
Walter R. Ramsaur, Los Angeles, Calif., assignor to The Garrett Corporation, Los Angeles, Calif., a corporation of California
Application December 13, 1944, Serial No. 568,018
5 Claims. (Cl. 257—128)



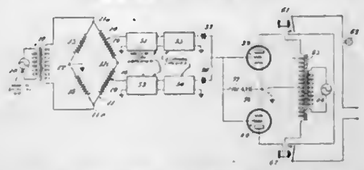
1. An oil cooler comprising a shell, a radiator core within said shell comprising tubes extend-

ing longitudinally of said shell, inlet and outlet ports in said shell, baffles extending longitudinally of said shell in spaced side by side relationship dividing said cooler into parallel longitudinally extending compartments, there being communicating openings between said compartments adjacent the ends of said baffles and adjacent said shell, said openings being disposed alternately at opposite ends of the cooler to form a tortuous oil flow channel from said inlet port back and forth longitudinally of said core to said outlet port with at least one side edge of said channel being formed by the interior surface of said shell,



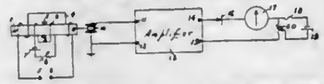
walls cooperating with the exterior surface of said shell to define a chamber exteriorly of said shell provided with a cooler inlet in communication with said inlet port and a cooler outlet in communication with said outlet port, said chamber forming a bypass exteriorly of said shell which extends from said cooler inlet to said cooler outlet and being of such extent peripherally of said shell as to substantially overlie one side edge only of each of said baffles to concentrate the transfer of heat from hot oil flowing through said bypass to one side edge only of said oil flow channel to rapidly decongeal oil along said one side edge of said flow channel.

2,474,690
FLEXIBLE CONNECTOR
Lawrence R. Robinson, Dormont, Kyle I. Robinson, Glenshaw, and Earl O. Berger, Bellevue, Pa., assignors to Pittsburgh Pipe Cleaner Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application January 22, 1946, Serial No. 642,598
3 Claims. (Cl. 287—85)



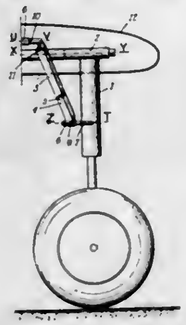
1. A flexible connector comprising a normally straight coil spring, coupling sleeves mounted on the opposite ends of said coil and projecting therefrom, the projecting portions of the sleeves being provided interiorly with transverse walls having central openings therethrough, a normally slack flexible tension member extending through the coil, means anchored in one of said openings and connected to one end of said tension member, a threaded stud connected to the other end of the tension member, a nut-like member mounted on said stud and disposed in the other of said openings, and means for retaining said nut-like member in said other opening.

2,474,691
WEB COATING APPARATUS
William A. Roehm, Rockville Centre, N. Y., assignor, by mesne assignments, to Virtu, Inc., Brooklyn, N. Y., a corporation of New York
Application March 20, 1946, Serial No. 655,831
12 Claims. (Cl. 91—43)



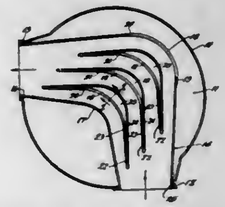
1. An apparatus comprising: a fountain adapted to contain a pool of coating material and having a feed passage leading to an outlet mouth, a movable member having a surface positioned in close proximity to the outlet mouth and adapted to travel past the same, and at least one feed roll contacting said pool and a portion of the circumference of which forms part of the wall of the feed passage, said roll being rotatable in a direction to feed the coating material from the pool through said passage to and through the outlet mouth and against said surface under the thus mechanically generated hydraulic pressure, said outlet mouth being provided adjacent its forward edge with a dam spaced from said surface a distance substantially equal to the thickness of the coating desired on the surface.

2,474,692
HIGH-SPEED PRECISION LIMIT BRIDGE ARRANGEMENT AND METHOD
Arthur L. Rossoff, Richmond Hill, N. Y., assignor to Universal Electronic Laboratories, Inc., New York, N. Y., a corporation of New York
Application June 26, 1945, Serial No. 601,641
3 Claims. (Cl. 175—183)



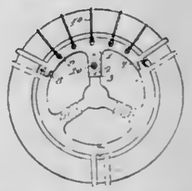
1. In a high speed precision limit bridge arrangement, the combination with a bridge system including a conventional A. C. Wheatstone bridge with interconnected ratio arms, a source of alternating current connected to the bridge at the outer terminals of said ratio arms, a standard arm and a pair of terminals to which a specimen of resistance, inductance or capacitance of unknown value is applied thus comprising an unknown arm, taps located on said ratio arms at points which correspond to balance when the unknown arm is permitted to assume each of its specified tolerance limits, and when the standard arm is set at the nominal value of the unknown, divided by the bridge ratio, of a detector system, said detector system consisting of two vacuum tube amplifier channels, said amplifiers having inherently very high input impedance, the input terminals of said amplifiers being connected respectively to the above mentioned ratio arm taps and commonly to the junction point of said standard and unknown arms, an indicating system to which the two amplified signals emanating from the above-mentioned amplifiers are applied, said indicating system serving the function of comparing the relative phases of the said signals and providing an instantaneous, sensible indication of whether or not the said signals are in phase or 180° out of phase, said two conditions corresponding to the value of the above mentioned unknown specimen falling out of and within, respectively, its specified tolerance limits.

2,474,693
MAGNETIC FIELD RESPONSIVE DEVICE
Robert G. Rowe, Niagara Falls, N. Y.
Application January 31, 1945, Serial No. 575,438
17 Claims. (Cl. 175—183)



1. In a magnetic field responsive device, a magnetostrictive element nodally supported for a preferred mode of substantially undamped vibration, coil means excited from a constant frequency source of periodically varying voltage and magnetically linked with said element to magnetostrictively vibrate said element, detector means coupled to said element sensible to variances in the characteristics of magnetostrictive vibrations of said element and indicator means coupled to said detector means arranged to indicate variances in the characteristics of magnetostrictive vibrations of said element.

2,474,694
RETRACTABLE LANDING GEAR FOR AIRCRAFT
Raymond Saulnier, Paris, France
Application October 6, 1945, Serial No. 620,748
In France July 25, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires July 25, 1964
13 Claims. (Cl. 244—102)



1. A retractable landing gear for an airplane which comprises, in combination, a shock strut pivotally mounted on said airplane about an axis parallel to the fore-and-aft direction thereof, a jointed brace strut interposed between said shock strut and said airplane, said brace strut being made of two parts pivoted to each other about an axis, so as to be able to form an angle having its apex turned toward the front, and two hinge means for connecting the respective ends of said brace strut to said shock strut and said airplane respectively, at least one of said hinge means consisting of a double pivot about two axes at right angles to each other and one of which is parallel to the fore-and-aft direction of the airplane while the other is parallel to the axis about which said two parts of the brace strut are pivoted to each other, the other of said hinge means being adapted to cooperate with the first mentioned one to keep said brace strut constantly in a plane parallel to said fore-and-aft direction irrespective of the position of said shock strut.

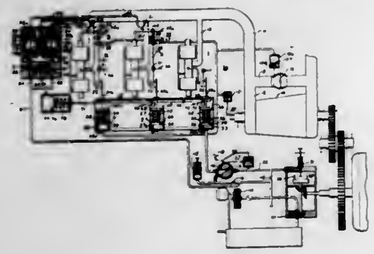
2,474,695
COLLECTING AND SEPARATING APPARATUS
Claude B. Schneible and Alvin S. Lundy, Detroit, Mich.; said Lundy assignor to said Schneible
Application March 23, 1946, Serial No. 656,737
11 Claims. (Cl. 183—79)

1. In combination, a casing providing a closed separation chamber, a high velocity fluid duct having an elbow bend and with a cut away heel portion communicating with said chamber, and a plurality of curvilinear rods extending longitudinally of said opening in laterally-spaced-apart relation and providing spaced passages extending longitudinally of said elbow portion between said duct and chamber.

2,474,696
ANTISKID TRACTION APPLIANCE FOR MOTOR VEHICLE WHEELS
Emil P. Schwab, Mount Lebanon, Pa.
Application February 11, 1947, Serial No. 727,888
6 Claims. (Cl. 152—223)

1. In an anti-skid and traction device or improvement thereof, for motor vehicle wheels, of the described class, convex and elongated rigid frames adapted to be applied to the tread of a

tire and extend lengthwise circumferentially thereof, the transversely disposed segments fitted with resilient material, with outer-side frame interlocking means, individual radial portions extending from each of the outer-side plates, a central spider or hub member embodying a rigid round disc or circular center that may be of spherical curvature to conform to the shape of wheel hub covers, with projecting slotted legs, the edges of said legs having transverse ribs or corrugations in which flanged ends of complementary radial portions fit selectively, and means for fastening these members together.



2,474,697

POWER PLANT CONTROL MECHANISM

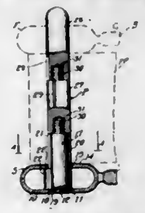
Anthony F. Schwendner, Ridley Park, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application December 12, 1945, Serial No. 634,519

7 Claims. (Cl. 60—13)

1. In combination, a turbine; a plurality of free-piston engine and compressor units utilizing fuel and air to provide motive fluid, consisting of products of combustion and air, for driving the turbine; said units including a normally active unit and one or more additional units; a governor driven by the turbine; means operated in response to the governor to start the additional unit or units as the load increases over the load range and operating in response thereto to stop the additional unit or units as the load decreases over the load range; means operated in response to the governor to control the input of fuel to the active unit or units; said last-named means including a spring or springs opposing increase of the fuel input to the unit or units; and means responsive to starting of each additional unit to reset the spring or springs of the already-active unit or units so that the fuel inputs to the latter and to the added unit are substantially equalized and responsive to stopping of a unit to reset the spring or springs of the remaining active unit or units so that the fuel inputs to the latter are substantially equalized if more than one unit remains active.

2,474,698



LOOSE-LEAF POST BINDER

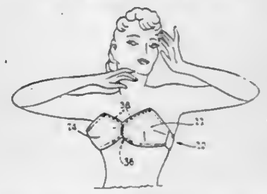
Samuel Segal, New York, N. Y., assignor to Wilson-Jones Co., Chicago, Ill., a corporation of Massachusetts

Application August 7, 1944, Serial No. 548,431

23 Claims. (Cl. 129—21)

1. In a loose leaf binder, a post, a tubular member having a lower flattened wall including key receiving means and having an upper flattened wall including an opening registering with said key receiving means, said post adapted to be received into said tubular member through said opening and having terminal key means

removably and non-rotatably interlocked with said key receiving means, and locking means movably carried by said post and cooperating with said upper wall to preclude withdrawal of said post from said tubular member.



2,474,699

BRASSIÈRE

Sidney Silbert, New York, and Henry Folb, Brooklyn, N. Y.

Application July 11, 1946, Serial No. 682,951

5 Claims. (Cl. 2—42)

1. For use with a brassière, a brace comprising a pair of self-form maintaining brace elements each including a portion adapted to lie closely adjacent the base of a breast and extend from the zone of separation between the breasts toward but not beyond the top of the base of the breast, means to interconnect said brace elements at the zone of separation, and an elongated element extending upwardly from said interconnecting means, the free end of said elongated element curving toward the wearer.

2,474,700

DIAZOTYPE SENSITIZED PAPERS HAVING CELLULOSE ETHER SIZING

Sam Charles Slifkin, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware

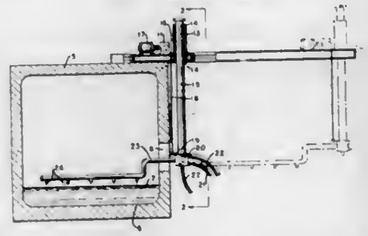
No Drawing. Application March 27, 1946, Serial No. 657,605

3 Claims. (Cl. 95—8)

1. A diazotype sensitized paper coated with a sensitizing solution containing a light sensitive diazo compound as the sensitizing agent and precoated with a surface sizing comprising an ether of cellulose conforming to the general formula

$$R(CH_2)_n\ O\ Cell$$

wherein R is a member of the group consisting of OH and COOH radicals, n is one of the integers 1, 2, 3 and 4 and Cell represents a cellulose nucleus.



2,474,701

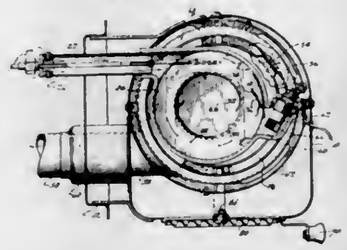
APPARATUS FOR DECARBURIZING STEEL

George V. Slottman, New York, N. Y., assignor to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York

Application December 2, 1947, Serial No. 789,237

1 Claim. (Cl. 266—34).

In a metallurgical furnace, apparatus for introducing oxygen into molten metal is the furnace comprising a track mounted on the furnace above the charging door thereof and projecting beyond the furnace at one side, a carriage movable along said track, a depending member supported by the carriage, a conduit for gas supported by the depending member and projecting therefrom in a direction toward the furnace, a water jacket surrounding said gas conduit, and means for vertically adjusting the depending member relative to the carriage, whereby the conduit for gas may be positioned vertically to be brought into alignment with the charging door and moved into and out of said door, and when outside of said door may be moved upwardly and away therefrom.



2,474,702

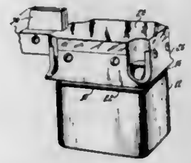
HEATER BURNER, PARTICULARLY FUEL DELIVERY AND IGNITING MEANS THEREFOR

Thomas F. Spackman, Chicago, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia

Application August 10, 1945, Serial No. 609,959

1 Claim. (Cl. 158—28)

A heater of the class described, comprising means providing a combustion chamber which is of circular cross section in a vertical plane, means for introducing fuel and air into the upper part of said chamber at an oblique angle to a combustion surface of the chamber wall, a trough adjacent the lower end of said combustion surface and adapted to collect liquid fuel, means providing a pocket below said trough and above the bottom of said chamber, an igniter in said pocket, said trough having a restricted opening located above said pocket, and a tongue extending downwardly from said trough and directing liquid fuel into said pocket.



2,474,703

INDUCTION HEATING COIL PROVIDING DISTRIBUTION OF HEATING EFFECT

Theodore H. Story, Merchantville, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application September 28, 1944, Serial No. 556,125

2 Claims. (Cl. 219—13)

1. An induction heating applicator for heating an object having sharp corners along a surface to be heated, comprising substantially a single turn conductor conforming in shape to said surface and including corresponding sharp corners tending in operation to provide a thinning of the flux at said corners of the work surface, and said conductor having regions of reduced cross section adjacent said sharp corners for concentrating the heating current and the heating flux at said corners, thereby to provide substantially uniform heating along the work surface both at and between said corners.

2,474,704

METHOD OF RENDERING MATERIALS WATER-REPELLENT

Mary Elizabeth Thayer, Midland, Mich., assignor to Dow Corning Corporation, Midland, Mich., a corporation of Michigan

No Drawing. Application August 11, 1948, Serial No. 43,753. In Great Britain June 29, 1948

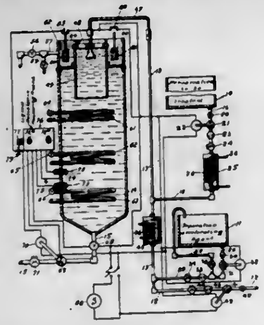
8 Claims. (Cl. 99—141)

1. A method of treating a solid organic base material which comprises contacting said material with the vapor of monomethyldiethoxysilane whereby the material is rendered water-repellent.

2,474,705

METHOD OF AND APPARATUS FOR PARTIALLY DEHYDRATING AND CLEANSING OILY WOOD PRESERVATIVES

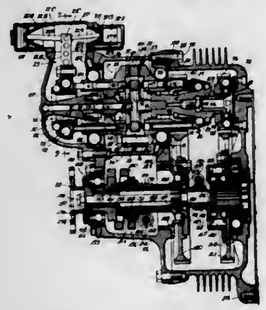
Joseph A. Vaughan and Joseph C. Vinson, Atlanta, Ga., assignors to Southern Wood Preserving Company, Atlanta, Ga., a corporation of Georgia



Application May 29, 1944, Serial No. 537,944

9 Claims. (Cl. 210—52.6)

1. That method of partially dehydrating and cleansing an oily wood preservative having a specific gravity greater than one, which is characterized by, introducing contaminated creosote preservative and wash-water into a settling tank; allowing the mixture to separate in the tank; measuring the moisture content of the settled preservative in the bottom portion of the tank; withdrawing the settled preservative from

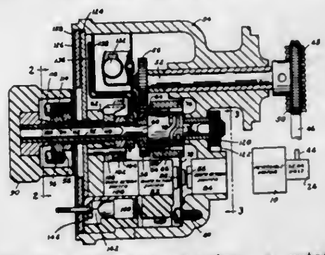


2,474,710

a point adjacent to the bottom of the tank in response to said measurements; and automatically

removing separated wash water from the upper portion of the tank.

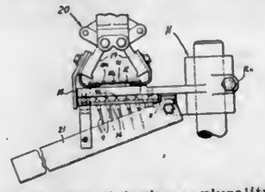
2,474,706
HYDRAULIC TRANSMISSION
Gunnar A. Wahlmark, Rockford, Ill., assignor to Sundstrand Machine Tool Co., Rockford, Ill., a corporation of Illinois
Application January 29, 1944, Serial No. 520,195
18 Claims. (Cl. 60—53)



1. In a transmission, a driving element, a driven element and hydraulic means operatively interposed between said elements comprising a rotatable cylinder block driven by said driving element and having a first plurality of annularly arranged cylinders and a second plurality of annularly arranged cylinders formed therein, the first and second plurality of cylinders being in line and having the same axis, a piston reciprocable in each of the cylinders to form a pump and a motor, a non-rotatable motion converting means acting on the pump pistons and being adjustable to vary the quantity and direction of fluid discharge from the pump to the motor, a second motion converting means associated with said driven element and acted upon by said motor pistons to convert the rotary motion of said cylinder block and the reciprocatory motion of said motor pistons into rotary motion of said driven element, and valve means for controlling the flow of fluid to and from the pump and motor cylinders permissibly rotatable with said cylinder block.

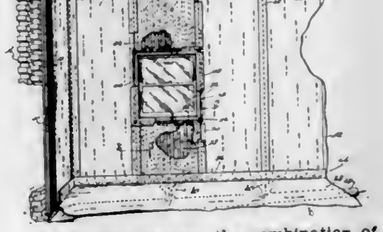
14. In a hydraulic transmission, a pump of the reciprocatory piston type, a motor of the reciprocatory piston type, means providing a closed hydraulic circuit interconnecting the pump and motor, a reservoir for make-up fluid, a pump for drawing fluid from said reservoir and supplying it as make-up fluid to said first named pump, and means for maintaining the fluid in said reservoir at a predetermined pressure above atmospheric pressure.

15. In a hydraulic transmission, a pump of the reciprocatory piston type, a motor of the reciprocatory piston type, means providing a closed hydraulic circuit interconnecting the pump and motor, a reservoir for fluid, a make-up pump operable to draw fluid from said reservoir and discharge the same to said first named pump and said motor to provide make-up fluid and to provide fluid for lubrication purposes, centrifugal means to which the lubricating fluid is returned, said centrifugal means serving as a separator of purely liquid and foamy fluid, and means for controlling the return of the purely liquid fluid to said reservoir to maintain therein a predetermined pressure.



2,474,707
ELECTRIC MOTOR SWITCHING MECHANISM
Eric C. Wahlberg, Stamford, Conn., assignor to Electrolux Corporation, Old Greenwich, Conn., a corporation of Delaware
Application January 29, 1944, Serial No. 520,261
2 Claims. (Cl. 318—32)

1. In a switching mechanism, a rotatably mounted cam, a cam follower associated therewith, means for mounting said follower for axial and rotational movement with respect to said cam, said cam having a profile including two axially spaced prolonged dwells connected by an inclined portion, said follower having a neutral position at the center of said inclined portion whereby rotation of the cam in one direction initially displaces said follower axially in one direction from the neutral position and thereafter retains the follower in the displaced position and rotation of the cam in the opposite direction initially displaces said follower axially in the opposite direction from said neutral position, means for rotating said follower in the proper direction to reestablish the original relative rotative position of the follower and cam whereby to return said follower to its neutral axial position, a pair of quick action electric switches, means responsive to axial displacement of said follower in one direction for actuating one of said switches and responsive to axial displacement of said follower in the opposite direction for actuating the other of said switch, the last-mentioned means restoring whichever switch has been actuated to its original condition upon return of said follower to its neutral position, means for preventing either said

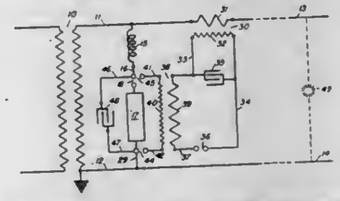


cam or said follower from imparting rotary motion to the other, a pair of arms rotatable with said cam and individually rotatably adjustable with respect to said cam, and stop means engageable by said arms to thereby establish opposite individually adjustable extreme positions for said cam.

2,474,708
APPARATUS FOR FORMING GLASS ARTICLES
Daniel B. Westin, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a corporation of Delaware
Application July 8, 1946, Serial No. 682,071
6 Claims. (Cl. 49—14)

1. Apparatus for stripping a plurality of glass articles from a single parent body of glass to which the articles are attached, comprising means for supporting said parent body with its attached articles, and operable means movable between said articles for engaging and dissociating the plurality of articles from said parent body.

2,474,709
HEATING SYSTEM
Lynn A. Williams, Jr., Northfield, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application December 16, 1943, Serial No. 514,435
9 Claims. (Cl. 98—31)



1. In a heating system, the combination of a side wall of a room comprising a plurality of wall board units each having a body portion in the form of a continuous unbroken sheet having a series of vertically extending ribs in slightly spaced relation to each other on the inner face of the sheet, a second sheet composed of porous material secured to the faces of said ribs so as to provide a plurality of independent ducts extending substantially throughout the height of the room between the ribs and adapted to carry ventilating air therethrough and to permit such ventilating air to seep out slowly through the porous sheet into the room, and means for delivering heated ventilating air to said ducts for escape into the room.

2,474,710
THREAD-TRIMMING AND PULL-OFF MECHANISM FOR SEWING MACHINES
Alfred R. Wood, Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application August 21, 1945, Serial No. 611,725
15 Claims. (Cl. 112—252)

1. In a sewing machine having a work-support, in combination, stitch-forming mechanism including at least one thread-carrying implement, means for feeding work past said stitch-forming mechanism, complemental thread-severing members disposed at the same side of the work-support and movable relatively to each other into and out of thread-severing relationship, one of said members being confined to movement about a fixed axis and the other of said members being bodily movable in a direction substantially parallel to its thread-severing edge, and means for simultaneously imparting the respective operative movements to said members during the thread-severing action of said members.

2,474,711
PROTECTIVE SYSTEM FOR ELECTRIC LINES
Edward H. Yonkers, Jr., Chicago, Ill., and Ralph R. Pittman, Pine Bluff, Ark.
Application November 11, 1943, Serial No. 509,934
5 Claims. (Cl. 175—294)

1. A system for protecting an electric line from the effects of arcing faults occurring between the conductors thereof which normally differ in potential when connected to a source of electric power, comprising in combination, elements constituting a voltage limiting and arc extinguishing device positioned between the section of line to be protected from the effects of arcing faults and the source of power, said voltage limiting and arc extinguishing device being constructed and arranged with respect to said conductors to provide a preferential sparkover path therebetween and being adapted to sparkover and carry current when a predetermined voltage is applied between said conductors, transformer means having a primary winding and a secondary winding means continuously connecting said primary winding in series with one of said conductors, a condenser connected in shunt with said secondary winding of said transformer means, and spark-gap means normally insulating said transformer and condenser from said voltage limiting and arc extinguishing device, said electrodes being so arranged with respect to said voltage limiting and arc ex-

tinguishing device as to sparkover and apply said

being spaced apart with respect to each other to

2,474,716

2,474,718
SWING SUSPENSION

tinguishing device as to sparkover and apply said predetermined voltage to said device concurrently with the time that the current in said one of said conductors exceeds a predetermined magnitude.

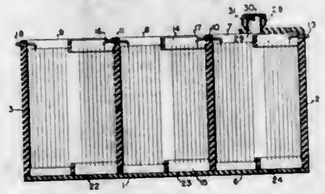
2,474,712
VARIABLE FILTER SCREEN
Luis Rodriguez Aparicio, Madrid, Spain
Application January 18, 1946, Serial No. 641,972
In Spain June 19, 1945
17 Claims. (Cl. 88—60)

1. A variable filter screen comprising a pair of rigid, opposing parallel transparent members laterally movable to and from each other, means operative to laterally move the transparent members together from spaced relation; a variable capacity closed flexible thin-walled reservoir housing a storage compartment outwardly of the margins of the transparent members for filter fluid, elongated and having laterally separable margins in fluid-tight connection with opposing margins of the transparent members along one entire side thereof, and means for varying the capacity of the reservoir and adapted to cause filter fluid to flow between the reservoir and the space between the transparent members along said entire side thereof.

2,474,713
MARQUISE OR CANOPY FOR BUILDINGS
Arthur J. Auble, Ord, Nebr.
Application August 29, 1946, Serial No. 693,630
4 Claims. (Cl. 20—57.5)

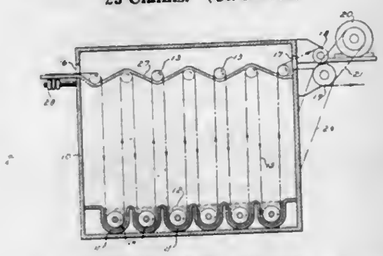
1. A canopy comprising supporting members extending outwardly from the wall of a building and having troughs formed therein, a first group of transversely disposed slats mounted between the inner ends of the supporting members, said slats being rearwardly and upwardly inclined and spaced from each other, means connected between said slats for rigidifying the slats and forming a continuous cover member with the slats, a second group of inclined slats disposed transversely between the outer ends of the supporting members, said slats of the second group being spaced apart with respect to each other to define air passages, each of said slats of the second group being formed with transverse troughs on their lower edges, means formed on the upper edges of each of the slats of the second group and disposed over the troughs of adjacent slats for directing water into the troughs and means for bracing the outer ends of the supporting members and outer end of the canopy to the wall of a building.

2,474,714
CIGARETTE LOCKING HINGE FOR CIGARETTE CASES
Frank Averna, Ridgewood, N. Y.
Application July 2, 1946, Serial No. 680,981
1 Claim. (Cl. 206—41)



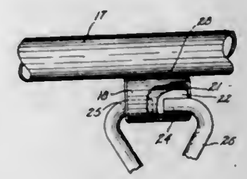
A case for cigarettes comprising a substantially shallow rectangular container having a bottom, front wall, end walls, an open top and an open rear wall, a hinge pin journalled in the end walls of the container adjacent said open rear wall, a substantially cylindrical hinge bar closing said open rear wall and eccentrically mounted on said pin to provide a cam surface at one longitudinal edge thereof, a flat cover for the container fixed to said bar, and said cover adapted to close the open top of said container, the cover being mounted on the bar so that when in open position the cam surface of the bar will be disengaged from cigarettes placed in the case parallel to said end walls and extending from said front wall to said hinge bar and the hinge bar being of a size so that the cam surface thereof will engage the ends of the cigarettes to hold them in place when the cover is closed, said pin lying in a plane parallel to said cover and extending medially thru said bar and on a line nearer the outer surface than the inner surface of the case when the cover is closed.

2,474,715
PROCESS OF PREPARING SUBSTITUTED PROPIONIC ACIDS
Robert D. Babson, Rahway, N. J., assignor to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Original application July 12, 1946, Serial No. 683,143. Divided and this application February 28, 1947, Serial No. 731,719
1 Claim. (Cl. 260—484)



The process which comprises reacting altogether ethyl β-acetoxy acrylate, chlorine and ethyl alcohol to produce ethyl α-chloro-β,β-diethoxy propionate.

2,474,716
SALT-WATER BATTERY
John T. Beechlyn, Worcester, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application September 18, 1944, Serial No. 554,686
4 Claims. (Cl. 136—103)



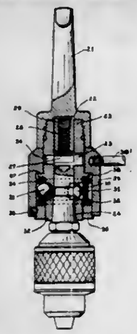
1. A salt water battery comprising a casing of insulating material substantially enclosed from the water medium, said casing being divided into a plurality of individual cells, each cell having a water flow passage of high electrical resistance compared to the electrical resistance of the cell; each said cell being provided with electrodes formed of opposed sheets of different metals and means supporting said sheets in a supporting frame within the cell, said cells being provided with a cover member, means contained in said cover member providing an escape for generated gases including a gas trap adapted to trap a volume of gas in said cover between the escape to the outside and the inside of said casing and form an insulation between the liquid within the medium and the external liquid.

2,474,717
PROCESS AND APPARATUS FOR TENSIONLESS HANDLING OF RUNNING LENGTHS OF MATERIALS
Harold H. Belcher, Orange, Mass., assignor to Rodney Hunt Machine Co., a corporation of Massachusetts
Application February 10, 1948, Serial No. 7,466
In Canada June 21, 1947
23 Claims. (Cl. 8—151)

13. A method for fluid treatment of running lengths of flexible materials such as textiles and the like which are subject to shrinkage comprising the steps of supporting the material in a depending loop, allowing the material to enter the loop and to leave the loop freely without appreciable tension, withdrawing the material from the loop at a predetermined speed, and applying a force to the inner surface of the loop by friction tending to advance the material at a speed appreciably exceeding the speed of withdrawal and thus avoiding excess tension in the material regardless of shrinkage thereof.

2,474,718
SWING SUSPENSION
Samuel Bender, Shreveport, La.
Application October 16, 1945, Serial No. 622,627
1 Claim. (Cl. 155—58)

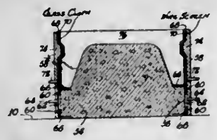
The combination with a playground swing having spaced upright supports and a horizontal swing supporting tube secured to the upper ends thereof, aligned supporting tubes secured to the lower and outer surface of said horizontal tube, said supporting tubes being spaced from each other, aligned bearing tubes of reduced diameter disposed in said aligned supporting tubes having rolling contact with the inner end of lower walls of said supporting tubes and having their upper and outer surfaces spaced from the inner surfaces of said supporting tubes, triangular shaped open links supported in the opposite ends of said bearing tubes with the opposed link ends at the open ends of said links being spaced a less distance than the diameter of said supporting tubes and having rolling contact therewith, and swing chains and a seat supported by said links.



2,474,719
METHOD FOR SEPARATING THE STEREOISOMERS OF α-HYDROXY-β,β-DIMETHYL-GAMMA-BUTYROLACTONE
Ralph H. Beutel, Newark, and Max Tishler, Rahway, N. J., assignors to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application October 23, 1945, Serial No. 624,104
7 Claims. (Cl. 260—236)

1. The process that includes the step comprising reacting racemic α-hydroxy-β,β-dimethyl-gamma-butyrolactone with alkali to form the alkali metal salts of racemic α-gamma-dihydroxy-β,β-dimethyl butyric acid, treating the alkali metal salts with approximately 1 molar equivalent of brucine dissolved in an inorganic acid and removing the brucine-dextrorotatory-α-gamma-dihydroxy-β,β-dimethyl butyric acid - brucine-acid salt formed.

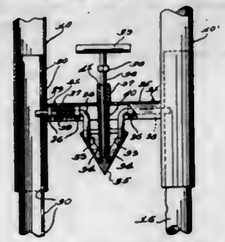
2,474,720
TOOL-OPERATING ATTACHMENT
Henry Robert Billeter, Highland Park, Ill.
Application January 17, 1946, Serial No. 641,787
2 Claims. (Cl. 77—33)



1. In a chip breaking drill operating means having a rotatable spindle, a rotatable bearing race on said spindle and a non-rotating race arranged about said spindle, a rolling bearing element between said races in rolling contact therewith and a surface irregularity in one of said faces to be engaged by said element to retract a drill from a work piece; the improvement comprising, said races and element being so constructed and arranged that said element engages said races at respectively different effective dis-

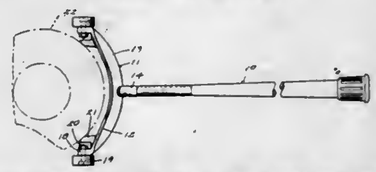
tances from the axis of said spindle whereby successive engagements of said element with said

surface irregularity occur at angularly displaced positions about the axis of said spindle.



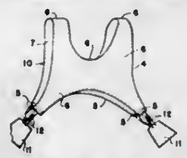
2,474,721
VACUUM MOLD FOR MOLDING CONCRETE AND THE LIKE
Karl P. Billner, Philadelphia, Pa., assignor to Vacuum Concrete Inc., a corporation of Pennsylvania
Application March 1, 1946, Serial No. 651,351
14 Claims. (Cl. 25—118)

1. A form element for use with a moldable plastic body containing excess vehicle, said form element having a pervious surface for engagement with said body, related fluid actuated means for securing said element to a support, said means comprising a sealing member for engagement with said support, and connecting means for communicating said porous surface and sealing member with a source of subatmospheric pressure to position said element with respect to said support and remove excess vehicle through said surface from said body, and pressure control means for actuating said securing means exclusively of the removal of excess vehicle.



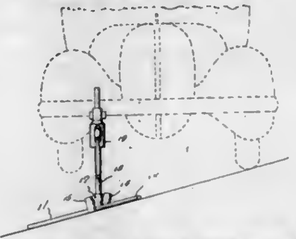
2,474,722
ADJUSTABLE WALKING AID
Herbert E. Blume, Tripoli, Iowa
Application February 14, 1946, Serial No. 647,616
2 Claims. (Cl. 135—50)

1. In an adjustable walking aid including a tubular member and an extension slidably telescoped therein, means for releasably locking said extension in said member, said means comprising a laterally projecting bracket provided on said member, a spring-pressed anchor bolt slidable on said bracket and engageable with apertures formed in said member and in said extension, said bolt having an angulated portion terminating in a bevelled end surface, a vertical stem slidable in said bracket, and a substantially triangular pocket provided on said stem, said pocket having an inclined inner surface in operative en-



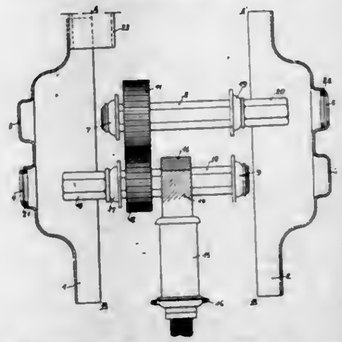
gagement with the bevelled end surface of said bolt.

2,474,723
SHUFFLEBOARD CUE
Elmer S. Boose, Tampa, Fla.
Application August 1, 1947, Serial No. 765,447
1 Claim. (Cl. 273—129)



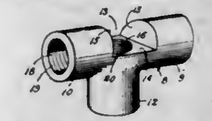
A shuffleboard cue head comprising an elongated longitudinally bent bar having a forward concave face and a rearward convex face, the opposite ends of said bar projecting forwardly, a pair of rollers carried by said opposite ends, a bracing web disposed at right angles to said bar and extending from the convex rear face thereof, and a forwardly projecting lug adjacent each of said opposite ends and spaced inwardly therefrom formed integrally with the forward concave face of said bar, the forward ends of said lugs being curved outwardly to provide contact points for engagement with a game piece and said contact points being in alignment with the axis of said rollers, whereby said forward ends will be maintained in the same vertical position relative to the bottom surface of said rollers in all positions of said bar.

2,474,724
DIAPER SUPPORT
Helen Booker Carter, Forest, Va.
Application October 17, 1946, Serial No. 703,910
3 Claims. (Cl. 2—112)



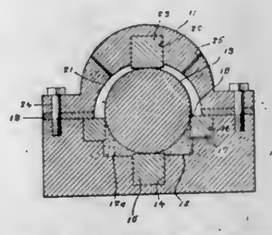
3. In a diaper support of the character described comprising symmetrically shaped front and back panels, each of said panels having a substantially semi-elliptical shaped cut-out portion at the top and centrally of the panel, said portions defining an enlarged neck opening having shoulder pieces at opposite sides thereof, the adjacent side edges of the panels being spaced from one another and providing unrestricted arm openings, the lower edge of each panel being arcuate shaped and the side edges thereof being curvilinear, whereby to form a pair of integral tab support members of gradually reduced width at the opposite sides of the diaper support in the vicinity of the lower corners of the panels, means to elastically connect a diaper support tab to each pair of said support members comprising a tape having its free ends attached to adjacent corners of said panels, and a diaper support tab secured to the tape.

2,474,725
SAFETY JACK BASE
Harry C. Clark, Jr., Belvidere, Ill.
Application August 6, 1945, Serial No. 609,275
3 Claims. (Cl. 243—346)



1. A jack base comprising a plurality of radially disposed leg members of substantial length rigidly joined together, and a plurality of socket elements rigidly secured to the base adjacent the junction point of said legs, the axes of said socket elements being at different angles with respect to the base.

2,474,726
DRILL HOLDER AND LIKE TOOL
Charles de la Source, Paris, France, assignor to Societe: Les Fils de Peugeot Freres, Valentigney, France, a French company
Application April 9, 1947, Serial No. 740,367
In France May 30, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires May 30, 1965



A portable hand-driven rotary-tool holder comprising two hollow cup-shaped shells forming, when assembled, a rigid and totally enclosed stress-resisting casing, parallel transverse spindles and pinions mounted thereon and a tool-rotating spindle geared to said transverse spindles and pinions, said transverse spindles, pinions and tool-rotating spindle being substantially contained in said casing, said cup-shaped shells having their walls symmetrical with respect to the axis of rotation of said tool-rotating spindle, and being joined together in a plane containing the axis of rotation of said tool-rotating spindle, each of said cup-shaped shells having two reinforcing hollow bosses to increase the rigidity of said casing, each of said transverse spindles extending between two of said bosses, each of said transverse spindles having at one of its ends a bearing located in one of said bosses, and at the other one of its ends a crank handle-receiving shank extending through the other opposite boss.

2,474,727
RAIL FITTING
James C. Denier, Cincinnati, Ohio
Application May 25, 1948, Serial No. 29,109
11 Claims. (Cl. 287—54)

1. A coupling of the type described which comprises, a first and a second socket, said sockets being integrally formed, said sockets meeting at a right angle to form a junction section between said sockets, said junction section terminating at a surface perpendicular to the axis of the first socket and in a plane including the axis of the second socket, the second socket terminating at a surface perpendicular to the axis of the second socket and tangent to the outer surface of the first socket, said junction section forming a platform between the sockets for receiving a similar platform of a second coupling of the type described.

2,474,728
REVERSIBLE BEARING
Lafayette Doran, Scranton, Pa.
Application August 1, 1947, Serial No. 765,455
3 Claims. (Cl. 308—74)

2. A bearing comprising top and bottom halves, the bottom half being recessed to receive packing material, the recess bottom wall being provided with a slot, a bearing insert in the slot, the recess sidewalls being cut away, and other bearing inserts disposed respectively in the cut away parts of the recess and providing for engagement with a shaft at the opposite sides of the same, and said top half of the bearing being secured

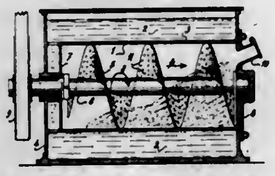
to the bottom half, said top half being relieved to provide air space over the top of the shaft and having a slot extending longitudinally thereof, a bearing insert within the slot of the top half and adapted to engage with the top of the shaft.

2,474,729

INSULIN PREPARATIONS

Pierre Durel and Paul Dubost, Paris, France, assignors to Societe des Usines Chimiques Rhone-Poulenc, Paris, France, a French body corporate

No Drawing. Application January 2, 1946, Serial No. 638,712. In France January 3, 1945
12 Claims. (Cl. 167—75)



10. An aqueous insulin solution prepared for use by subcutaneous injection which contains between 10 %and 20% by weight of polyvinylpyrrolidone.

2,474,730

ICE-CREAM MACHINE WITH PERFORATED SCREW AGITATOR

Gustave Henry Georges Espinasse and Jean Paul Charles Espinasse, Ales, Gard, France

Application June 5, 1946, Serial No. 674,598
In France April 18, 1946
3 Claims. (Cl. 62—114)

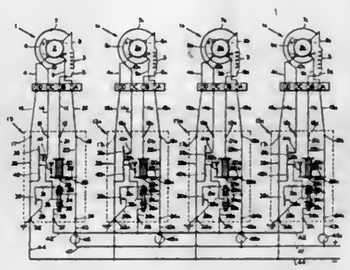
1. In a machine for producing ice cream, a single stirring member constituted by a screw conveyor, a cylindrical chamber enclosing exactly said screw, means for rotating said screw inside said chamber, and common means for feeding the ice cream into and out of one end of said chamber, through the chamber wall.

2,474,731

TWO-WAY PLOW

Russell T. Evans and John H. Clasen, Anaheim, Calif., assignors to Alice Marian Mellen, Whittier, Calif.

Application May 5, 1945, Serial No. 592,104
17 Claims. (Cl. 97—29)



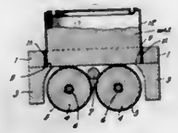
1. In combination in a plowing structure: a frame; means to lift said frame; a plow movably carried on said frame; a lifting arm for said plow connected with said plow and movably mounted on said frame; trip means having a shoulder with respect to which said frame is movable; movable latch means on said arm comprising a leaf member one end of which is adapted to engage with said shoulder of said trip means; and tensionable means controlling said latch means and connected with the other end of said leaf member and adapted to jerk said leaf member into position to disengage the latter from said trip means upon development of predetermined tension in said tensionable means.

2,474,732

AUTOMATIC CONTROL SYSTEM FOR DYNAMOELECTRIC MACHINES

William F. Fell and Evan S. Smith, Hasbrouck Heights, N. J., assignors to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware

Original application August 10, 1943, Serial No. 498,122. Divided and this application February 19, 1946, Serial No. 648,782
2 Claims. (Cl. 171—119)



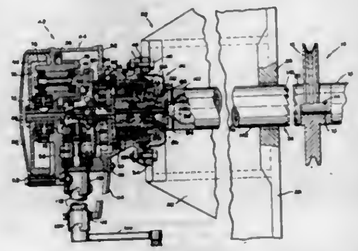
1. In combination, a load circuit, a plurality of generators, means connecting said generators to said load circuit, a regulator associated with each of said generators, each regulator including a variable resistance carbon pile element arranged to control the voltage output of its associated generator, electromagnetic means for varying the resistance of said carbon pile element, said electromagnetic means including a first winding connected across the output of its associated generator to regulate said carbon pile element so as to maintain a substantially constant voltage output from said associated generator, and a second winding for varying the voltage setting of said first winding, circuit means interconnecting the second winding of each regulator to the second winding of the other of said regulators, said circuit means including line resistance in the output circuit of each generator, a voltage dividing means connected across said line resistance and arranged in said circuit means in such a manner that upon a difference in the voltage drop across the line resistances of said regulators there may be effected a current flow through said second windings in such a direction as to tend to maintain a predetermined division of load between the respective generators, and said voltage dividing means including an adjustable resistance for effecting an initial balance of the load currents provided by the several generators upon a predetermined division of the load.

2,474,733

SELF-FEEDING PASTE FLOOR WAX APPLIER

William S. Gallagher, Brantford, Ontario, Canada

Application July 6, 1946, Serial No. 681,629
In Canada May 30, 1946
3 Claims. (Cl. 91—48)



3. An applicator having a hollow body, a plurality of rolls, means for rotatably mounting the rolls in parallel relation in said body, said body having an opening in its bottom through which said rolls project to engage a surface, an opening in the top of the body for receiving a receptacle containing material to be applied and opening directly onto said rolls, the opening being slightly larger and of substantially the same contour as that of the receptacle, the wall of said opening being provided with means for supporting the receptacle, a roll disposed in the bight between the upper surfaces of the first-mentioned rolls, said roll being freely rotatable and adapted to be rotated by frictional contact with said first-mentioned rolls, and handle means connected to said body.

2,474,734

ENGINE STARTER APPARATUS

Samuel Gilbert, Cedar Grove, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware

Application November 26, 1946, Serial No. 712,465
2 Claims. (Cl. 123—179)

1. In starter apparatus for an engine including a radiator and a shaft, said apparatus comprising a starter including a flywheel, a flywheel pinion, a rotatable internal gear having a sun gear, a bell gear engaging said pinion and having a pinion engaging said internal gear, a stationary orbital gear, a barrel, planet gears between said stationary orbital and sun gears, an axially stationary rotatable nut in said barrel, a bevel gear coaxial with said internal and orbital gears, a two-part torque limiting friction disc pack in said barrel having discs of one part splined to said barrel and said nut, respectively, and discs of the other part connected to said barrel and said bevel gear, respectively, a second bevel gear engaging said first bevel gear, mesh rod means, and a screw shaft having long lead thread connection to said nut therein, the combination of a one-piece engine-jaw member adapted for mounting on said engine shaft end, adapter means having an end portion adapted for mounting on the engine with an intermediate portion extending under the radiator and a starter mounting opposite end portion extending upwardly from said intermediate portion at a position beyond the radiator from the engine, a one-piece starter jaw member having its jaw means at one end and a shank at the other end splined to said screw shaft, said starter jaw member having an elongated tubular body extending from said shank end under the radiator above said intermediate adapter portion to its jaw means at the other end for cooperation with the engine jaw member, said mesh rod means being operative for actuating said screw shaft to engage said starter jaw member to said engine jaw member, an arm carried by and extending from said starter and having bearing means spaced from the starter and a shaft in said bearing means having opposite end means adapted for bayonet connection to said second bevel gear and a hand crank, respectively.

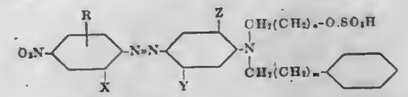
2,474,735

DEHYDRATION OF COMPOUNDS BY DISTILLATION WITH HYDROPHOBIC OIL

William S. Harmon, Elizabeth, N. J., assignor to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey

No Drawing. Application May 16, 1945, Serial No. 594,169
7 Claims. (Cl. 202—42)

1. The process that comprises adding an aqueous solution of essentially non-volatile material in the form of a fine spray to a hot hydrophobic oil which has a boiling point in excess of about 200° C., and which is a non-solvent for said material, controlling the rate of addition of said solution, while continuously heating said hydrophobic oil so that a mixture of hydrophobic oil and water from said solution is continuously and instantaneously distilled, substantially without penetration of water into the body of said oil, thereby forming a finely divided and essentially anhydrous suspension of said material in hydrophobic oil.

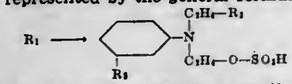


2,474,736

MONOAZO DYESTUFFS

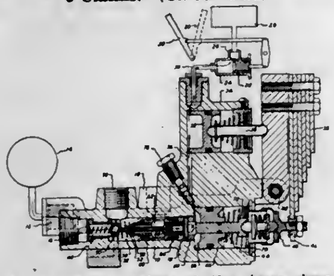
Basil Jason Heywood, Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain

No Drawing. Application August 3, 1945, Serial No. 608,842. In Great Britain August 28, 1944
4 Claims. (Cl. 260—205)



1. A monoazo dyestuff represented by the formula

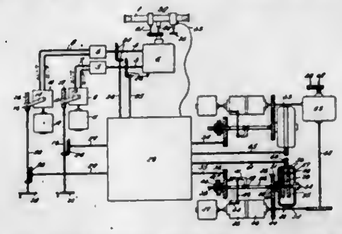
wherein R and X are selected from the group consisting of —H, —CH_3, —OCH_3, —Cl, —Br and —NO_2, Y and Z are selected from the group consisting of —H, —CH_3, —OCH_3 and —Cl, n is an integer from 1 to 4, and m is an integer from 1 to 3.



2,474,737
MONOAZO DYESTUFFS
Basil Jason Heywood, Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application August 3, 1945, Serial No. 608,844. In Great Britain August 28, 1944
4 Claims. (Cl. 260—205)

1. A monoazo dyestuff which in the form of its acid is represented by the general formula,

wherein R_1 is a member selected from the group consisting of 2-cyano-4-nitroaniline, 2-cyano-6-chloro-4-nitroaniline and 2-cyano-6-bromo-4-nitroaniline; R_2 is a substituent selected from the group consisting of hydrogen, chloro and methyl; and R_3 is a radical selected from the group consisting of phenyl, phenoxy, tolyloxy and chlorophenoxy.



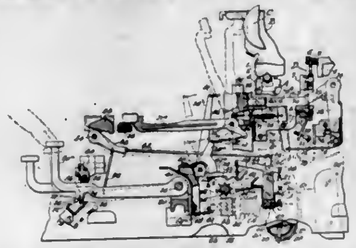
2,474,738
HYDRAULICALLY OPERATED BRAKE VALVE
Charles Hollerith, Jackson, Mich., assignor, by mesne assignments, to The B. F. Goodrich Company, Akron, Ohio, a corporation of New York
Application July 10, 1946, Serial No. 682,672
3 Claims. (Cl. 60—54.5)

2. A regulating valve of the type described comprising a body having co-axial inlet, brake, return and displacement chambers, said inlet chamber being adapted for connection to a source of the hydraulic pressure medium and said displacement chamber having a movable wall adapted to be acted upon by the hydraulic pressure built up in said chamber to produce a piston effect, a restricted passageway extending between said brake and displacement chambers and providing a choked flow of the operating fluid to take place between the two chambers, an inlet valve, a fluid motor for actuating said valve, and an air bleeder passage between said motor and said displacement chamber.

2,474,739
FIRE CONTROL APPARATUS FOR GUNS
Maurice Kerr Ingoldby, deceased, late of Tynemouth, England, by Thomas Frederick Clarke, Swanley, England, and Percy William Cole, Purley, England, executors, assignors to Vickers-Armstrongs Limited, London, England, a company of Great Britain
Application February 27, 1945, Serial No. 580,031
In Great Britain October 12, 1937
Section 1, Public Law 690, August 8, 1946
Patent expires October 12, 1958
11 Claims. (Cl. 89—41)

1. In a fire control system, sighting means, a predictor, input and output motion transmitting members associated with said predictor, gun operating mechanism controlled by the output members of the predictor, hydraulic motors having output connections to said sighting means for imparting training and elevating movements to the sighting means and also having driving connections to the input members of the predictor so as to apply to the predictor measurements of

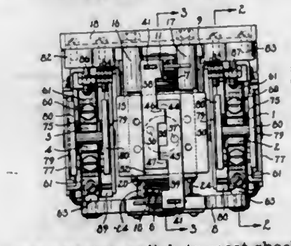
training and elevating displacements of the sighting means, hydraulic fluid pressure generating means supplying said motors, means regulating the supply of hydraulic fluid pressure to said hydraulic motors for selectively controlling the adjustment of the sighting means for training and elevation, and means transmitting to the predictor a measure of the rate of training and elevation applied to said regulating means.



2,474,740
PROCESS OF PREPARING PARTIAL ESTERS OF GLYCERINE AND FATTY ACIDS
Martin Hill Ittner, deceased, late of Township of Wall, Monmouth County, N. J., by Hildegard H. Ittner, executrix, West Hartford, Conn., assignor to Colgate-Palmolive-Peet Company, Jersey City, N. J., a corporation of Delaware
No Drawing. Application April 12, 1946, Serial No. 661,891
4 Claims. (Cl. 260—410.7)

1. The process of preparing partial esters of glycerine and fatty acids having a larger number of free hydroxy groups than the starting glycerides which comprises feeding the fatty glycerides having at least two esterified hydroxy groups and glycerine containing a minor proportion of water into the lower and upper ends, respectively of a vertical reaction zone, passing the materials in countercurrent flow through the reaction zone at a temperature within the range of about 200° to 350° C. under sufficient pressure to keep water in liquid phase, and withdrawing the reaction product and excess glycerine from the top and bottom of reaction zone, respectively.

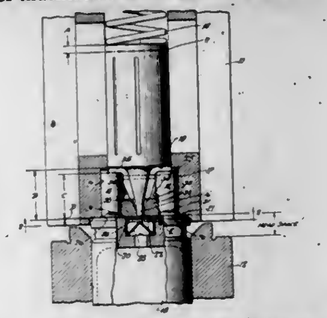
2,474,741
POWER-OPERATED TYPING MECHANISM FOR TYPEWRITERS OR LIKE MACHINES
John J. Kittel, St. Albans, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a corporation of New York
Application July 27, 1945, Serial No. 607,293
14 Claims. (Cl. 197—17)



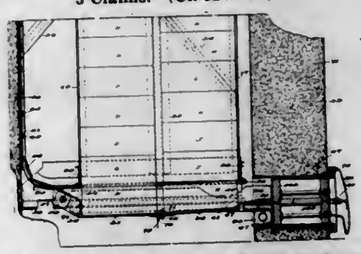
14. In a typewriting machine, type-carrying members; means mounting said members for movement from inactive position to typing position and return; a motor; a toothed rotary element; a kinetic type fluid coupling for transmitting drive from said motor to said toothed rotary element, the latter being capable, because of the impositive drive-transmitting characteristics of said coupling, of normally floating with respect

to said motor; and, respectively associated with each of a plurality of said members, power-transmitting mechanism operatively connected to said type-carrying member and including an actuator normally disengaged from said rotary ele-

ment but being adapted to be moved into engagement with said element to be driven thereby so as to effect movement of said type-carrying member to typing position; and key-operated means for moving said actuator into engagement with said rotary element.



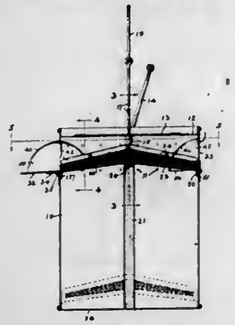
2,474,742
ELECTROMAGNETIC SWITCH
Clarence W. Kuhn, Wauwatosa, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application July 8, 1943, Serial No. 493,811
17 Claims. (Cl. 200—103)



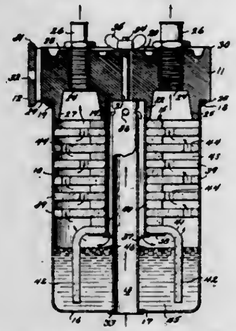
1. In an electric switch to meet shock test, the combination with a pair of coacting contacts, both movable, of individual actuating means for said contacts having like movements oppositely of one another to move said contacts into and out of abutting relation, and means by which said actuating means are interconnected to prevent at any time such movements thereof independently of one another whereby they are subjected to counteraction one by another under shock.

2,474,743
BREECH BOLT WITH GAUGE MEMBERS
Alexander Kurti, Woodbury, Conn., assignor to The Autoyre Company, Incorporated, Oakville, Conn., a corporation of Connecticut
Application March 11, 1946, Serial No. 653,557
4 Claims. (Cl. 42—16)

2. In a firearm adapted to fire cartridges having a base-mounted primer, the combination comprising a bolt having a face for abutment with the base of a cartridge for chambering the cartridge, a firing pin associated with said bolt and slidable with respect thereto, said pin having a nose for indenting the primer and an abutment portion, a gauging member interposed between said pin and the base of the chambered cartridge and having its opposite end faces adapted to abut said portion and base to determine the degree of indentation of the primer, said bolt having a guiding aperture for said member, and said member having a cam surface adjacent its forwardly disposed said end for engagement by a cartridge about to be chambered.

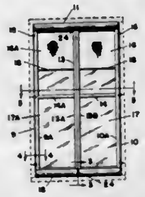


2,474,744
DISPENSING MEANS
Albert L. Lambert, Narberth, and Edgard C. Franco-Ferreira, Jenkintown, Pa., assignors to Heintz Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Application July 11, 1944, Serial No. 544,354
3 Claims. (Cl. 312—67)



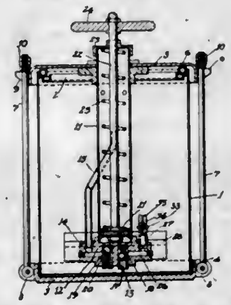
1. A dispensing device for packaged goods comprising, means for supporting two columns of packages with one column disposed directly behind the other, a drawer having side and bottom walls and adapted to contain two packages one directly beneath each column when the drawer is in closed position, means for supporting said drawer for sliding movement from its closed to an open position in which the package in the front portion of the drawer may be removed, means for supporting the rear column of packages above the upper level of the drawer bottom when the drawer is in open position, the front column of packages being then supported by the package in the rear of the drawer, whereby when the drawer is closed after removal of a package the weight of the front column of packages on the remaining package in the drawer will cause that package to remain beneath the front column as the drawer slides to closed position despite the frictional engagement of the drawer and package so that said remaining package is disposed in the front portion of the drawer when the latter is again in closed position, and the bottommost package in the rear column drops into the rear portion of the drawer.

2,474,745
MINNOW BUCKET
John R. Lewis, Indianapolis, Ind.
Application June 21, 1947, Serial No. 756,129
7 Claims. (Cl. 43—56)



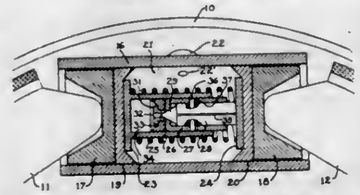
1. A live bait container comprising a bucket; a basket carried therewithin; members shiftable vertically of the bucket for lifting and lowering said basket; said basket having at opposite sides restricted openings therefrom at the floor level of the basket; said bucket having side openings coinciding with said basket openings when the basket is in an uppermost position; and a door over each of said bucket openings hinged to open outwardly and downwardly to form discharge chutes from said basket openings.

2,474,746
AIR CLEANER
Rufino Lopez and Bernard Allen, Brownsville, Tex.
Application May 18, 1948, Serial No. 27,785
5 Claims. (Cl. 261—99)



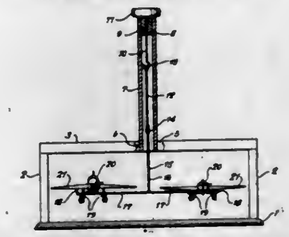
1. An air cleaner of the type described, comprising a manifold having a plurality of air outlets extending therethrough and adapted to be connected to the air intakes of air operated instruments; a container depending from and detachably connected to said manifold with said outlets communicating with the interior of the container, the bottom of said container being adapted to hold a pool of lubricating oil; a hollow member depending from and detachably connected to said manifold and having its lower end open and spaced above the bottom wall of the container; a plurality of spaced baffle members mounted on said hollow member and having their outer peripheral edges engaging the inner peripheral side walls of the container, said baffle members having staggered openings therein to provide a plurality of continuous tortuous courses for air through the container; and an air inlet conduit having one end communicating with the upper end of said hollow member and its other end communicating with the exterior of the cleaner whereby when the instruments connected to the manifold outlets are operated, the air consumed in their operation will pass through the air cleaner and the dust particles carried by the air will be ensnared and removed by the baffle members and the air as it passes through the container will be impregnated with oil vapor for lubricating the instruments as the air passes therethrough.

2,474,747
COMBINATION SCREEN AND STORM WINDOW
Enric Madriguera, North Yonkers, N. Y.
Application September 24, 1945, Serial No. 618,198
6 Claims. (Cl. 160—25)



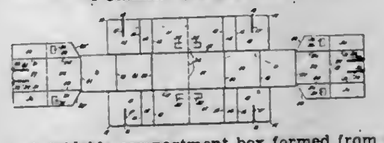
1. In a device of the character described, the combination of a frame, guide members on said frame, upper and lower rollers adapted to accommodate a length of flexible material, one half of which comprises a screen and the other half of which comprises a window.

2,474,748
HYDRAULIC BRAKE FLUID PUMPING APPARATUS
John C. McMurray, Winthrop, Mass.
Application March 19, 1946, Serial No. 655,549
2 Claims. (Cl. 222—67)



1. An apparatus for filling hydraulic brake systems of motor vehicles comprising a container, a cover member for the container, a cylinder carried by the cover member and depending into the container, said cylinder having inlet and discharge ports at its lower end, inlet and discharge valves controlling said ports, a piston in said cylinder, means accessible from the exterior of the cover member to give said piston its suction stroke, a spring within the cylinder for giving said piston its discharge stroke, said cylinder also having a by-pass port which provides communication between the interior of the cylinder and the interior of the container, a by-pass valve separate from both the inlet and discharge valves for controlling said by-pass port said by-pass valve closing against the pressure in the cylinder and a float connected to said by-pass valve and holding it closed so long as the liquid level in the container is above a pre-determined low-level point but opening the valve when said liquid level falls below said pre-determined low-level point.

2,474,749
SELF-ADJUSTING HYDRAULIC BRAKE MECHANISM
Theodore E. Miller, Detroit, Mich.
Application August 27, 1945, Serial No. 612,883
13 Claims. (Cl. 188—152)



1. A brake wear-compensating unit for a piston and cylinder fluid pressure brake actuator comprising means forming a self-contained fluid expansible trap chamber, valve means, a valve actuating member connecting with the valve means adapted to open the valve means to admit fluid to said chamber in response to brake-actuating movement of a brake piston and adapted to close the valve means to trap fluid in said chamber in response to brake-releasing piston movement, means adapted to vary the fluid capacity of said chamber actuatable by the valve actuating member and brake piston release stop means adapted to be controlled by the volume of fluid trapped in the chamber.

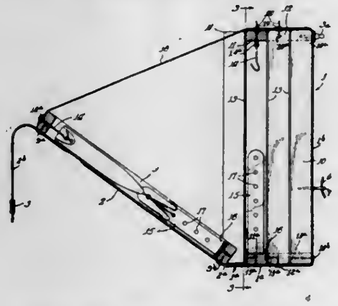
2,474,750
AIRPLANE TOY
Jacob Moeller, Cincinnati, Ohio
Application January 5, 1946, Serial No. 639,298
1 Claim. (Cl. 272—31)

An aeroplane toy comprising, in combination, an elongated base, an upstanding wall at each end portion of said base, a plurality of cross-members joining the upper ends of said walls, a vertical, hollow standard secured to said cross-members centrally above said base, a bearing block in the upper end of said standard, a vertical shaft journalled in said block and projecting above said standard, a winding disc secured to the upper end of said shaft, a hook formed at the lower end of said shaft, a length of endless cord in said standard, a carrier, said carrier being formed from one piece wire rod and comprising a vertical splice, a closed loop at the upper end thereof, a pair of horizontal arms outstretched in opposite directions from the lower end of said splice, and an angulated portion at the outer end of each of said arms, said cord passing around said hook and through said loop to suspend said carrier from said shaft, and a pair of toy aeroplanes, each of said arms passing through the undercarriage of one of said aeroplanes, said angulated portion bearing against the underside of the starboard wing thereof to retain the toy aeroplanes substantially horizontal, and said aeroplanes revolving about the vertical axis of said carrier upon manipulation of said disc.

2,474,751
FOLDABLE COMPARTMENT BOX
Emil Morand, Jersey City, N. J.
Application March 21, 1946, Serial No. 655,929
4 Claims. (Cl. 229—28)

1. A foldable compartment box formed from a blank of sheet material and comprising a bottom panel and side panels, each side panel having longitudinal partition members extending from each end thereof including an intermediate spacer section, said spacer sections and longitudinal partition members being adapted to be infolded to dispose the latter within the box interior in spaced parallel relation to the side panels and so that said spacer sections cooperate with said side panels to form closed box end corners, transverse partition members adapted to be engaged with and across said longitudinal partition members between said side panels, a relatively foldable, longitudinally sequential, arrangement of outer end panel, top panel and tuck-in end panel extending from each end of said bottom panel, each said tuck-in end panel having side flaps laterally extending therefrom, each said arrangement being adapted to be in-folded so that the outer end panels respectively close the opposite exterior box ends and the top panels close the box top with said tuck-in end panels inserted within and through the box interior in face to face relation to extend perpendicularly to the bottom panel between opposed inner ends of said inturned longitudinal partition members and transversely between said side panels and with said side flaps of the tuck-in end panels extending inwardly therefrom to lie contiguous to the side panels, whereby to form closed corners intermediate said tuck-in end panels and side panels, and a line of weakening perforations extending across said side and bottom panels medially of the inserted tuck-in end panels, whereby to permit division of the box, by rupturing said side and bottom panels along said line of perforations, into two completely closed box units.

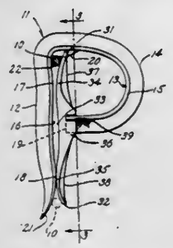
2,474,752
FISHERMAN'S KIT
Ora A. Montgomery, Miami, Okla.
Application August 7, 1944, Serial No. 548,428
5 Claims. (Cl. 43—31)



2,474,754
LUBRICATOR
Auben E. Moxley, East Orange, N. J., assignor to Bel-Ray Company, Inc., Newark, N. J., a corporation of New Jersey
Application November 21, 1946, Serial No. 711,274

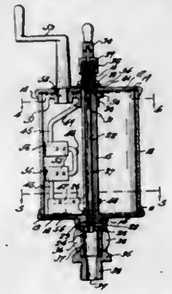
for selectively energizing the electromagnets to lock the chain sprockets in accordance with the position of carriage travel.

2,474,756
HONING TOOL FOR EXTERNAL CYLINDRICAL SURFACES



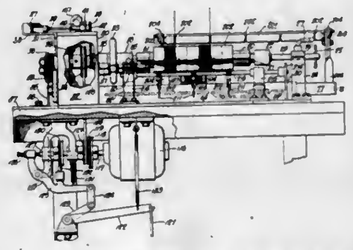
vice with a driving motor for modulating the transmitter, a central A. C. power supply and control circuit with three branch circuits, the first branch circuit including the motor of the phonographic device, the second branch circuit including a transformer primary, an electromagnetic contact device and a time operated switching device in said A. C. power supply and control

2,474,752
FISHERMAN'S KIT
Ora A. Montgomery, Miami, Okla.
Application August 7, 1944, Serial No. 548,428
5 Claims. (Cl. 43—31)



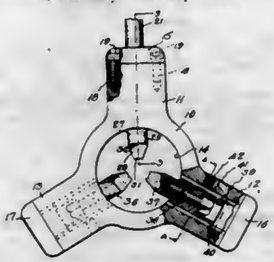
2. A fisherman's kit, comprising: a cover member; front, intermediate and rear frame members within said cover member, each of said frame members including means for supporting a plurality of baits therein; means rigidly securing said rear frame member with respect to said cover member; means mounting said front and intermediate frame members for outward pivotal movement with respect to said rear frame member; and means secured to said front and rear frame members limiting the outward pivotal movement of said front frame member with respect to said rear frame member, said last-named means also serving to detachably maintain said intermediate frame member in substantially parallel relationship with said rear frame member.

2,474,753
SPRING CLOTHESPIN
Glenn R. Morton, Grand Island, Nebr.
Application July 29, 1947, Serial No. 764,308
4 Claims. (Cl. 24—137)



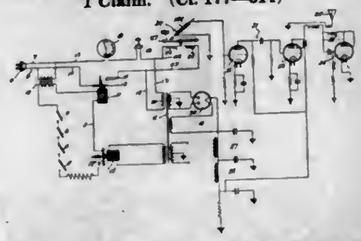
1. A clothes pin, comprising a substantially P-shaped resilient member including a leg and an integral loop, said loop including a lower end terminating short of and in slightly spaced relation to said leg between the ends thereof, a clamping member interposed between said lower end of said loop and said leg, a rockable connection between an intermediate portion of said clamping member and said lower end of said loop, said loop resiliently clamping said clamping member against said leg.

2,474,754
LUBRICATOR
Auben E. Moxley, East Orange, N. J., assignor to Bel-Ray Company, Inc., Newark, N. J., a corporation of New Jersey
Application November 21, 1946, Serial No. 711,274
7 Claims. (Cl. 184—82)



1. A lubricator comprising a reservoir member having transparent side walls, said reservoir member being provided with manipulatable valve controlled discharge means, a revolvable lubricant agitator means mounted within said reservoir member to freely revolve about said discharge means, said agitator means having wiper means adapted to traverse the interior surface of the transparent side walls of said reservoir member when said agitator means is revolved, and means for revolving said agitator means.

2,474,755
COIL WINDING MACHINE
Leon E. Pamphilon, Yeadon, Pa., assignor to Airdesign, Incorporated, Upper Darby, Pa., a corporation of Pennsylvania
Application September 12, 1947, Serial No. 773,593
9 Claims. (Cl. 242—10)

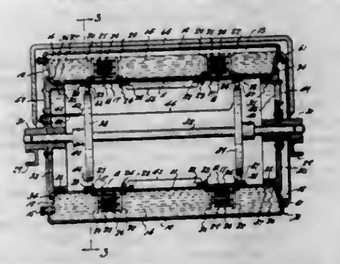


1. A coil winding machine comprising a base member, a mandrel adapted to receive a coil foundation, a support on said base member for said mandrel, means for rotating said mandrel, a carriage adapted to oscillate axially with respect to the mandrel, a pair of sprockets mounted on said base member in axial alignment with the mandrel, a chain mounted on said sprockets, driving connections for the mandrel and one of said sprockets, a pair of chain sprockets mounted on said carriage and adapted to engage opposite lengths of said chain, an electromagnet associated with each of said chain sprockets and adapted to electromagnetically lock the chain sprockets with respect to the carriage, and means for selectively energizing the electromagnets to lock the chain sprockets in accordance with the position of carriage travel.

2,474,756
HONING TOOL FOR EXTERNAL CYLINDRICAL SURFACES
Walter J. Papciak, Detroit, Mich.
Application November 19, 1946, Serial No. 710,869
3 Claims. (Cl. 51—205)

1. A device of the character described comprising, a body provided with a work receiving aperture and a plurality of hollow outwardly radiating legs, said legs having open outer ends, each of said legs provided with a socket extending throughout its length, a sleeve member held against independent rotation within each of said sockets, each sleeve having a tapering socket at one end, a honing tool having an inner tapering end fitted into engagement with the socket of each of said sleeves to properly align the tool, said tools converging on the central axis of the work receiving aperture, an elongated anchoring screw rotatably adjustable longitudinally of each of said sleeves, said screws carrying said tools, one of said tools being held in engagement with the work under the resilient tension of a coil spring to yieldably contact the work within the work receiving aperture, the remaining tools being selectively adjustable toward and away from the work, and a removable closure for the open outer end of each leg for shielding said anchoring screws within said legs against contact with foreign objects and thereby avoiding maladjustment of the tools.

2,474,757
BURGLARY OR FIRE ALARM SYSTEM
Daniel Parilla, Brooklyn, N. Y., assignor of fifty per cent to Sebastiano D'Amico, Brooklyn, N. Y.
Application June 4, 1945, Serial No. 597,473
1 Claim. (Cl. 177—314)



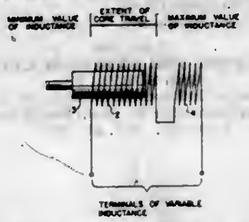
An alarm circuit comprising a radio transmitter, a rectifier arrangement for supplying the same with rectified current, a phonographic device with a driving motor for modulating the transmitter, a central A. C. power supply and control circuit with three branch circuits, the first branch circuit including the motor of the phonographic device, the second branch circuit including a transformer primary, an electromagnetic contact device and a time operated switching device in said A. C. power supply and control circuit, controlling the two aforementioned branch circuits only, a master relay circuit having a secondary winding coupled with the transformer primary, a normally closed protective circuit containing alarm contacts and an alarm relay, the latter operating the aforesaid electromagnetic contact device, means for providing said protective circuit with current, said means including the third branch circuit, branching off from the central A. C. power supply and control circuit and a transformer, a master relay in said master relay circuit, and contacts controlled by said master relay, opening the protective circuit when the master relay is energized.

2,474,758
COMPLEX SALTS OF STREPTOTHRICIN
Robert L. Peck, Plainfield, N. J., assignor to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application August 24, 1945, Serial No. 612,558
14 Claims. (Cl. 260—236.5)

5. The process for preparing complex salts consisting of a streptothricin acid salt and an alkaline earth metal halide that comprises reacting a streptothricin acid salt with an alkaline earth metal halide in a solvent medium in which these reactants and the corresponding complex salt are freely soluble, and separating the complex salt thus formed by changing the relative proportion of the solvent in the total liquid mass and crystallizing out the substantially pure streptothricin complex salt.

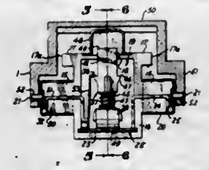
2,474,759
SNOW REMOVER
Harry Schmitz, Brooklyn, N. Y.
Application February 21, 1948, Serial No. 10,001
5 Claims. (Cl. 219—19)

1. In apparatus for the purposes described, a hollow roller having spaced external and internal circumferential walls and connecting end walls adapted to define an annular liquid containing chamber, electrical heater means of the liquid-in-circuit type submerged in the liquid content of said chamber, means to serve operating current to said heater means, and a framework having means for supporting the roller subject to tractional rotation, said framework being adapted to be connected to an automotive vehicle by which the roller is to be propelled.



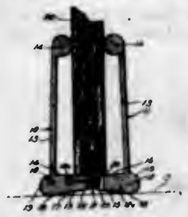
2,474,760
AUTOMATIC VENTILATOR
George J. Smith, Thorndike, Mass.
Application March 29, 1946, Serial No. 657,956
1 Claim. (Cl. 98—99.8)

An automatic window ventilator comprising a box-like frame adapted to be mounted in a window opening of a room, a screened front closure for said frame, means hingedly connecting said screen to said frame, spring means biasing said screen toward a closed position, a plurality of transparent shutters, means pivotally mounting said shutters on vertically-spaced horizontally-disposed axes extending across an intermediate portion of said frame inwardly of said screen, said shutters being adapted to overlap each other when in closed positions to form a substantially closed and transparent wall for said frame, means linking said shutters together for simultaneous movement, means inwardly of said room for opening and closing said shutters, a plurality of stationary transparent baffle plates mounted rearwardly of said shutters and extending across said frame, alternate ones of said baffle plates being oppositely curved and overlapping each other in spaced relation, and spring means operatively connected to said shutters and biasing the same toward a closed position.



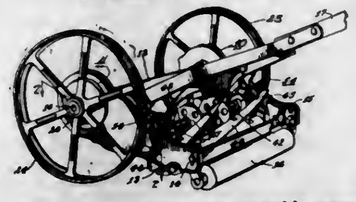
2,474,761
COIL HAVING A SLIDABLE CORE AND METHOD OF ESTABLISHING THE RATIO BETWEEN THE MAXIMUM AND MINIMUM INDUCTANCE THEREOF
Theodorus Antonius Spoor, Eindhoven, Netherlands, assignor, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application April 22, 1946, Serial No. 663,817
In the Netherlands July 15, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires July 15, 1962
3 Claims. (Cl. 171—242)

2. A variable inductance system comprising a first coil element, a second coil element connected in series with said first coil element, said second coil element having a plurality of turns and being coaxial and longitudinally spaced from said first coil element, and a movable magnetic core slidable within said first coil element from a first position corresponding to a minimum inductance value of the first coil element to a second position corresponding to a maximum inductance value of said first coil element, said second coil element being so disposed remote from said minimum inductance position of said core and adjacent said maximum inductance position of said core that the removal of each turn



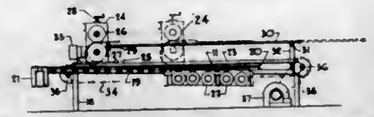
of said second coil successively increases the ratio of maximum to minimum inductance of said inductance system.

2,474,762
CIRCUIT BREAKER
Edward V. Sundt, Arcadia, Calif.
Application May 26, 1945, Serial No. 596,053
8 Claims. (Cl. 200—116)



1. A circuit breaker comprising; a hollow body having spaced external electrodes, a pair of spaced bus bars connected to said electrodes, one of said bus bars having a bimetallic portion formed with a stop, a jumper bar for interconnecting said bus bars, and means mounting said jumper bar for releasing the bus bars' connection upon a predetermined current passing through said bus bars, said means including a push button extending through a wall of said body having a stop engaging abutment, a flexible shield over the external end portion of said push button and having its marginal edge portions sealed to said body and a guard over the shield pivotally secured upon the body.

2,474,763
NAPKIN HOLDER
Halford R. Thomas, Alhambra, Calif.
Application October 30, 1945, Serial No. 625,573
4 Claims. (Cl. 211—50)

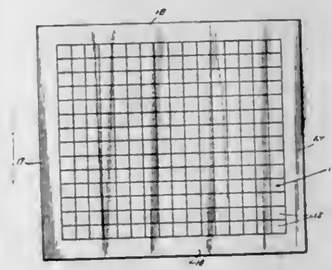


1. A holder for paper napkins or the like, comprising a pair of upstanding sections adapted to rest on a surface and to receive the napkins on edge between them, each section having an inwardly projecting napkin supporting lower portion forming a base extending continuously from one side to the other of the section, and pivotal means interconnecting said lower portions of the sections whereby the sections rock together and press against the napkins.

2,474,764
TWO-SPEED LAWN MOWER
Samuel P. Townsend, Maplewood, N. J.
Application February 18, 1946, Serial No. 648,288
5 Claims. (Cl. 56—249)

1. A two-speed lawnmower assembly comprising a pair of spaced housings, a main shaft journaled in said housings, a pair of driving wheels journaled on said main shaft, a reel shaft journaled in said housing, a gear mounted at each end of said reel shaft, means operatively associated with said gears for selectively clutching and declutching said gears to the reel shaft, a gear train in each housing connecting each reel shaft gear to the main shaft, said gear trains being of different ratios whereby when one reel shaft gear is clutched to the reel shaft a relatively slow speed of the reel is attained, and when the opposite gear is clutched to the reel shaft, a relatively high reel shaft speed is attained.

2,474,765
PACK OPENING AND SHEET RECEIVING MEANS
Bernard G. Vaughn and William V. Fell, Zanesville, Ohio, assignors to Armco Steel Corporation, a corporation of Ohio
Application August 24, 1945, Serial No. 612,492
6 Claims. (Cl. 271—10)



4. In a pack opening device, a frame, a bed mounted on said frame upon which a pack may be placed, means for clamping the pack to the bed, a carriage mounted on the frame above the bed and pack for movement longitudinally of the pack, pinch rolls mounted in the carriage, means for driving said pinch rolls, means for driving said carriage in a traverse path substantially throughout the length of said pack and back to a starting position, said pinch rolls being adapted to receive the freed end of a pack sheet, a limit switch located adjacent said pinch rolls to be contacted by a sheet engaged in said pinch rolls, said switch acting to initiate a traverse of said carriage away from the pack end from which said sheet has been freed, a second limit switch located beyond the opposite end of the pack to be actuated by said carriage to initiate return movement thereof, and a third limit switch located near the first mentioned end of said pack to stop the carriage upon completion of its return traverse.

2,474,766
ALLOY STEEL
Alvin G. Waggoner, Philadelphia, and William B. Brooks, Pittsburgh, Pa.
No Drawing. Application October 11, 1945, Serial No. 621,860
7 Claims. (Cl. 75—123)

1. A low alloy, high tensile steel suitable for the production of plates having improved weldability, said steel containing 0.12 to 0.20 per cent carbon, 0.40 to 0.90 per cent manganese, 0.50 to 1.50 per cent silicon, 0.08 per cent maximum phosphorus, 0.04 per cent maximum sulphur, 0.20 per cent maximum chromium, from a trace to 1.0 per cent nickel, from a trace to 0.35 per cent copper, 0.03 to 0.20 per cent titanium, 0.10 to 0.45 per cent of an element selected from the group consisting of molybdenum, zirconium, vanadium and columbium, the remainder being substantially all iron.

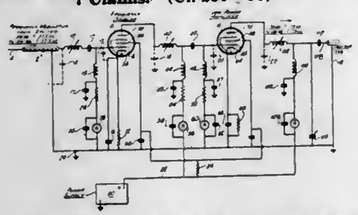
2,474,767
COMPOSITION FLOOR COVERING OF RESILIENT PLIABLE COATED MATERIAL
William Robert Walker, Baltimore, Md.
Application October 2, 1944, Serial No. 558,769
2 Claims. (Cl. 20—6)

1. A floor covering comprising a frame of a material consisting of a smooth layer provided with a backing fixed to the floor with its upper surface at a level corresponding to twice the thickness of the aforesaid material, said frame encircling an opening, and of a number of separate unconnected units, each consisting of two sheets of the aforesaid material of the same size, having their backings adhesively secured together with the smooth layers turned outwardly, a number of such units being aligned side by side solely in frictional contact with the floor, filling the opening encircled by the frame, said units being wedged in so as to be held by the frictional contact between each other and between them and the frame, said frame and said units being resilient and pliable.

2,474,768
CUSHION OR MATTRESS UNIT
Elmer J. Wines, South Gate, Calif., assignor to William Pensak, Los Angeles, Calif.
Application March 8, 1946, Serial No. 653,065
5 Claims. (Cl. 5—353)

1. A method of constructing a cushion or mattress unit having a coiled spring enclosed by a bag, comprising the following consecutive steps of rolling an elongated sheet of flexible material into hollow elongated cylindrical form, gather-

ing the material at each end and encircling the gathered material by a filamentary element, turning the unit so formed inside out, and inserting a suitable spring coil coaxially into the unit.



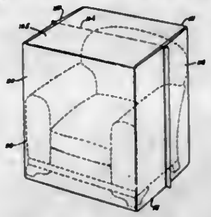
2,474,769

HIGH-FREQUENCY CIRCUITS

John E. Young, Merchantville, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application October 16, 1945, Serial No. 622,603
7 Claims. (Cl. 250—36)

1. High frequency apparatus comprising a two conductor transmission line, a vacuum tube of the pentode type having an anode, a cathode, a grid, a screen grid and a suppressor grid, the suppressor grid being directly connected to said cathode, a connection from one output terminal of said line to the grid of said pentode tube, said connection including in series a first variable high frequency inductance coil and a blocking condenser, a low impedance connection from the other output terminal of the line to the cathode, circuits for subjecting said anode, cathode, grid and screen grid to suitable operating potentials, and a resonant output circuit connected between said anode and cathode, said output circuit comprising a second variable high frequency coil in series with the anode, said first and second coils operating in conjunction with the stray grid to ground and plate to ground capacities respectively of said pentode tube at high frequencies, and means including a choke coil connected in series with said second mentioned coil for supplying plate potential to the anode of said pentode.



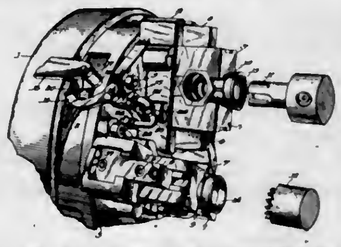
2,474,770

BAG AND METHOD OF MAKING THE SAME

Stanley G. Yount, Los Angeles, and Paul R. Halstead, Compton, Calif., assignors to Southland Paper Converting Company, Los Angeles, Calif., a corporation of California

Application May 15, 1944, Serial No. 535,642
7 Claims. (Cl. 229—53)

1. A paper bag comprising when collapsed side walls lying in parallel planes, a bottom having a gusset fold parallel to said side walls and substantially co-extensive in width with the latter, a sealed junction between said side walls parallel to the line of the gusset fold, the ends of said side walls being closed with the ends of said gusset



folds included in the closing and said ends of the side walls having no gussets therein, said bag being adapted to open into a receptacle of substantially rectangular cross section with parallel side walls and parallel end walls, the latter being formed from end portions of the side walls.

2,474,771

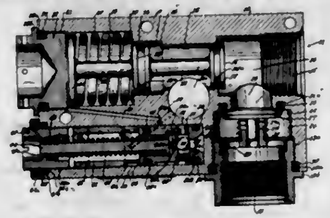
AIR OPERATED CHUCK

James B. Amstutz, Oak Park, and Otto E. Fieroh, Chicago, Ill., assignors to Crane Co., Chicago, Ill., a corporation of Illinois

Application January 23, 1947, Serial No. 723,688
4 Claims. (Cl. 279—4)

1. A fluid operated chuck comprising in combination a set of jaws, fluid conveying means for effecting actuation of the said chuck, chuck blocks attached to the chuck for holding articles to be machined, a wedge member for holding the said jaws in spaced apart relationship so that upon predetermined movement of the said wedge member relative to the said jaws the latter members are reciprocably moved, a fluid chamber within the chuck cooperating with the said fluid conveying means, piston means fastened to the said wedge member, and valve means actuated upon rotation of the said chuck for release of fluid pressure from the said chuck chamber whereupon the said jaws move apart upon the said wedge member to thereby release the machined article.

2,474,772



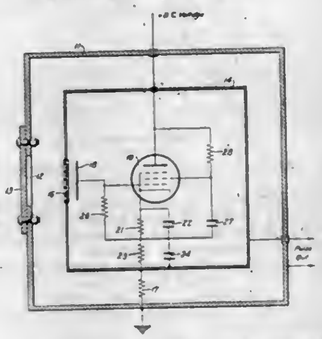
UNLOADING VALVE

Benjamin N. Ashton, Kingston, N. Y., assignor to Electrol Incorporated, Kingston, N. Y., a corporation of Delaware

Application November 24, 1943, Serial No. 511,514
2 Claims. (Cl. 137—153)

1. A valve for high pressure hydraulic systems comprising a casing having a bore therein,

said bore having in end to end alignment a first bore portion, a second bore portion of smaller diameter than said first portion, a third bore portion of larger diameter than said second bore portion, and a fourth bore portion of larger diameter than said third bore portion, said fourth bore portion forming a cylinder, and said first bore portion being adapted to be connected with a source of liquid under pressure, a liquid return line communicating with said second bore portion, a piston in and slidable axially of said cylinder, a valve plug having a peripheral groove



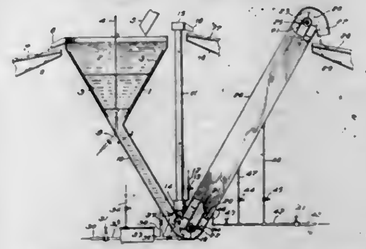
therein connected to said piston and movable therewith into and out of said second bore portion, a rubbery ring in said groove for sealing engagement with said plug and said second bore portion, a member having a peripheral groove therein fixed to and spaced from said valve plug and disposed in said third bore portion and a rubbery sealing ring in the last mentioned peripheral groove in sealing relation to said member and said bore for preventing communication between said second bore portion and said cylinder.

2,474,773

RADIATION DETECTOR

William R. Baker, Berkeley, Calif., assignor to the United States of America as represented by the United States Atomic Energy Commission

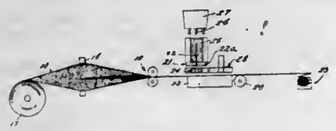
Application November 6, 1947, Serial No. 784,356
3 Claims. (Cl. 250—83.6)



1. In a radiation detector, the combination comprising a first chamber having a port formed therein, a cover for said port adapted to support radioactive material and to be sealed over said port, a second chamber disposed within said first chamber having a grid portion aligned with said port, a collector plate disposed within said second chamber and aligned with said grid and port, electrical means connected to said first and second chambers and said collector plate for maintaining said second chamber at a positive potential with respect to said first chamber and said collector plate at a positive potential with respect to said second chamber, and an amplifier disposed within said second chamber and connected between said second chamber and said collector plate for amplifying the charge collected by said collector plate.

2,474,774

HEAVY-MEDIA SEPARATION APPARATUS



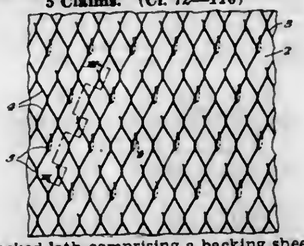
James Joseph Bean, Riverside, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine

Application June 1, 1945, Serial No. 596,982
1 Claim. (Cl. 209—173)

In a heavy media separation process in which a mixture of particles of differing specific gravities is continuously introduced into a main body of aqueous separatory fluid, said fluid having suspended therein sufficient finely divided solids to produce in the fluid in the zone in which separation takes place an apparent average density intermediate those of the particles to be separated, whereby a more dense fraction sinks and a less dense fraction floats, the float fraction being overflowed; the improved method of treating a feed containing sink particles ranging in size from fines through large pieces which comprises: continuously collecting the entire sink fraction at a hydraulic level below the fluid separatory zone; continuously adding to the main body of separatory fluid, intermediate said separatory zone and said hydraulic level, sufficient make up fluid to maintain hydraulic equilibrium in said separatory zone; continuously adding aqueous fluid media of less average apparent density than that in said separatory zone to the collected sink fraction at said hydraulic level; continuously raising, with an air lift, fluid media together with that portion of the finer-sized particles in said sink fraction as moves therewith, from said hydraulic level to a level above said main body; adjusting the rate of said air lift fluid raising with respect to the rate of fluid addition at said hydraulic level to maintain an apparent average fluid density in the lowest levels of said main body less than the apparent average fluid density in said separatory zone; holding said rates substantially constant; maintaining the depth of a secondary fluid body extending upwardly from and in open communication with the fluid at said hydraulic level sufficient to hold said secondary body in hydraulic balance with said main body of fluid, continuously raising by mechanical means the remaining portion of the collected sink fraction from said hydraulic level through said secondary fluid body to a level above the top thereof and collecting said separately raised sink fractions.

2,474,775
METHOD AND APPARATUS FOR SIMULTANEOUSLY SECURING TOGETHER AND PERFORATING PAPER WEBS
William G. Borchers, Hoboken, N. J., assignor to Autographic Register Company, Hoboken, N. J., a corporation of New Jersey
Application November 12, 1946, Serial No. 709,251
15 Claims. (Cl. 93—61)

1. The method of fastening together a pair of superposed plies of stationery having on a surface of at least one of said plies in contact with the other ply, an area carrying an inactive adhesive susceptible to activation by a treatment with an activating liquid, which comprise perforating the superposed plies through said adhesive-bearing area; simultaneously introducing activating liquid for said adhesive between said plies through the resulting perforations; and pressing said plies together adjacent said perforations.

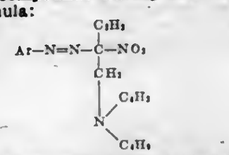


2,474,776
HEXANEBISDIBUTYLAMIDE AS PLASTICIZER FOR BUTADIENE-ACRYLONITRILE COPOLYMER
Arthur W. Campbell, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a corporation of Maryland
No Drawing. Application March 22, 1945, Serial No. 584,245
1 Claim. (Cl. 260—32.6)

A composition of matter comprising a rubber-like synthetic copolymer of 1,3-butadiene and acrylonitrile and an amount sufficient to effectively plasticize said copolymer of hexanebisdibutylamide.

2,474,777
MANUFACTURE OF CHLOROPYRENES
Peter George Carter, Manchester, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application December 4, 1945, Serial No. 632,789. In Great Britain December 7, 1944
4 Claims. (Cl. 260—649)

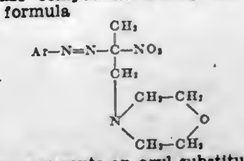
1. A process for the recovery of pyrene in the form of tri- and tetra-chloropyrenes from fractions of coal tar, hydrogenated coal tar and hydrogenated coal and the production of such chloropyrenes, which comprises passing chlorine into an organic solvent solution of the pyrene containing fraction until the formation of the chloropyrenes in the solution is substantially complete and separating the resulting chloropyrenes from the reaction mixture by cooling and filtering, the organic solvent employed being one which is inert under the conditions of chlorination and in which the chloropyrenes are substantially insoluble at atmospheric temperatures but in which the pyrene containing fraction, from which the pyrene is being extracted in the form of chloropyrenes, is soluble.



2,474,778
BACKED LATH AND MANUFACTURE THEREOF
Leonard W. Cross, Warwood, W. Va., assignor to Wheeling Steel Corporation, Wheeling, W. Va., a corporation of Delaware
Application December 5, 1945, Serial No. 632,890
5 Claims. (Cl. 72—116)

1. Backed lath comprising a backing sheet and a sheet of semi-rigid lath, the lath having strands which are severed to form elongated fastening elements each connected with the sheet of lath at one end and having the other end free, the fastening elements extending through the backing sheet and having portions engaging the back of the backing sheet to hold the backing sheet and the sheet of lath together.

2,474,779
AZO COMPOUNDS FROM 1-DI-n-BUTYLAMINO-2-NITRO-BUTANE
Edward F. Degering, La Fayette, Ind., and Gerhard van Biema, Jackson Heights, N. Y., assignors to Purdue Research Foundation, La Fayette, Ind., a corporation of Indiana
No Drawing. Application August 17, 1945, Serial No. 611,263
6 Claims. (Cl. 260—193)



1. Nitroazo compounds having the following structural formula:

wherein Ar is an aromatic nucleus selected from the group consisting of β-naphthyl and para-chlorophenyl.

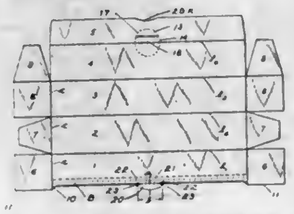
2,474,780
AZO COMPOUNDS FROM 1-N-MORPHOLINO-2-NITRO PROPANE
Edward F. Degering, La Fayette, Ind., and Gerhard van Biema, Jackson Heights, N. Y., assignors to Purdue Research Foundation, La Fayette, Ind., a corporation of Indiana
No Drawing. Application August 17, 1945, Serial No. 611,264
6 Claims. (Cl. 260—176)

1. Nitroazo compounds having the following structural formula

wherein Ar represents an aryl substituent group being the residue of a diazotized aryl amine.

2,474,781
METHOD FOR PRODUCING PYRAZINE BY CATALYTIC DEHYDROGENATION OF PIPERAZINE
James Kenneth Dixon, Riverside, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application April 12, 1946, Serial No. 661,874
17 Claims. (Cl. 260—250)

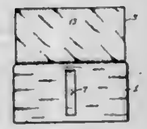
1. The method of producing pyrazine which comprises completely vaporizing piperazine; passing the vaporized material over a catalyst selected from the group consisting of the oxides of the members of the left sub-groups of the fifth, sixth and seventh groups of the periodic arrangement of elements, at dehydrogenation temperatures; condensing the condensable portion of the reacted vapors and isolating the pyrazine content therefrom.



2. A process according to claim 1 in which the temperatures used are from about 375°–480° C.

2,474,782
CATALYTIC DEHYDROGENATION OF PIPERAZINE
James Kenneth Dixon, Riverside, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application April 12, 1946, Serial No. 661,876
15 Claims. (Cl. 260—250)

1. The method of producing pyrazine which comprises completely vaporizing piperazine; passing the vaporized material over a palladium dehydrogenation catalyst at dehydrogenation temperatures; condensing the condensable portion of the reacted vapors and isolating the pyrazine content of the condensate.



2. The method of producing pyrazine which comprises completely vaporizing piperazine; passing the vaporized material over a palladium dehydrogenation catalyst at 250–450° C.; condensing the condensable portion of the reacted vapors and isolating the pyrazine content of the condensate.

2,474,783
CARTON
Fred C. Gluck, Minerva, Ohio, assignor to Minerva Wax Paper Company, Minerva, Ohio, a corporation of Ohio
Application April 8, 1946, Serial No. 660,569
3 Claims. (Cl. 206—58)

1. A carton for dispensing rolled sheet material formed from a single sheet comprising end, front, bottom, back and top cover walls with a flap hingedly secured to said top cover wall and adapted to lie interiorly of said front wall when the carton is closed without engaging the bottom wall, said front wall having its top edge lower than the height of the end walls and lying between the upper and lower edges of said flap when the cover is closed, a cutter blade secured to said front wall adjacent its top edge and overlying said edge and terminating short of said end walls, a locking tab removably secured to the top edge of said front wall behind said blade, said flap having a slot at substantially the level of said edge for receiving said tab, said slot being shorter than the maximum width of said tab but not substantially wider than the thickness of said tab.

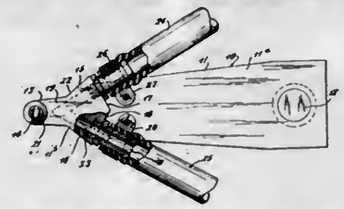
2,474,784
DISPENSER FOR FACIAL TISSUES
Sue Golden, New York, N. Y., assignor to Alfred A. Doran, New York, N. Y.
Application May 9, 1947, Serial No. 746,845
1 Claim. (Cl. 150—28)

A dispenser for facial tissue, comprising a single sheet of woven material having a friction surface, said sheet being substantially rectangular in configuration, folded to form front and rear panels, the side edges of said panels being secured together to form a single pocket therebetween, a flap integral with the front panel said flap extending lengthwise of said panel and foldable on said front panel against the inner face of the rear panel, and being freely movable into and out of said pocket, a slot in the front panel having communication with the pocket, the median line of said slot being substantially equidistant from the side edges of said front panel, both ends of said slot terminating short of the top and bottom edges of said panel, said slot constituting a weakened portion crosswise of said front panel upon which the dispenser is foldable to position the slot inside of said fold, said pocket being adapted to hold a multiplicity of stacked facial tissue-sheets between said front panel and said flap, the terminal sheet being accessible through said slot and withdrawable therethrough from the stack when the dispenser is unfolded said friction surface of said material being adapted to exert friction on a stack of tissues in said pocket as the terminal tissue is being withdrawn through said slot.

2,474,785
PROCESS FOR PRINTING WITH SULPHURIC ESTERS OF LEUCO VAT DYESTUFFS
William B. Hardy and Elizabeth M. Hardy, Bound Brook, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application July 31, 1946, Serial No. 687,520
7 Claims. (Cl. 8—70)

1. A process for printing difficultly oxidizable sulfuric ester salts of leuco vat dyestuffs of the indigoid type which comprises printing the ester salts with dichromates and in the presence of an effective amount of an aniline sulfonic acid radical, substituted by at least one aliphatic hydrocarbon radical containing not more than one double bond, and developing the print with acid vapors.

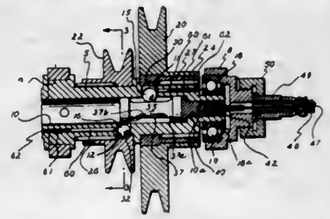
2,474,786
PERMEABLE BREAKWATER
Harvey J. Humphrey, Cleveland, Ohio
Application September 9, 1946, Serial No. 695,703
9 Claims. (Cl. 61—4)



8. A breakwater comprising a series of polygonal hollow integrally formed blocks arranged to have their adjacent walls in contacting overlapping engagement with each other, spaced piers or jetties projecting outwardly from the shore and with the end blocks of the series contacting the same and said series extending therebetween, said blocks having angularly disposed wall surfaces located outwardly of their overlapping engagement with each other and forming a continuous serrated frontal surface extending between said piers each of said blocks being provided in the walls thereof with a plurality of openings, each of said blocks being provided in the corners thereof with pipes extending below the bottom wall of the block into the bottom of the body of water in which the breakwater is located and filled with cement or similar material after the block has been positioned in the breakwater.

2,474,787
ARC WELDING COMPOSITION AND METHOD OF MAKING SAME
George G. Landis, South Euclid, and Vladimir Peters, Lakewood, Ohio, assignors to The Lincoln Electric Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application September 24, 1948, Serial No. 51,118
14 Claims. (Cl. 148—24)

14. In a method of making a flux composition suitable for use in arc welding, the steps which comprise intermixing dry, finely ground flux ingredients with water glass solution, said ingredients being selected from the class consisting of manganese, calcium, magnesium and aluminum silicates and of silicate forming components, namely manganese oxide and silica and calcium, aluminum, titanium and iron oxides and calcium and calcium magnesium carbonates together with manganese oxide and silica in approximately combining ratio, and the amount of water glass being approximately the minimum required to agglomerate said ingredients, then heating the resulting mass at from 700° F. to 1200° F. until substantially anhydrous, and grinding the dried mass to the form of granular, free flowing particles wherein said ingredients are bonded together in uniformly distributed condition by dry water glass.

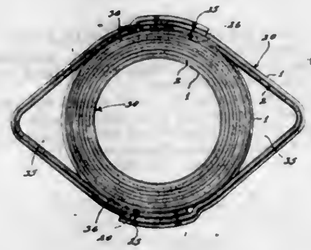


2,474,788
WELDING ELECTRODE
Frank G. Marbach, Cleveland, Ohio, assignor to Morrison Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application January 21, 1947, Serial No. 723,354
6 Claims. (Cl. 219—4)

1. A welding electrode comprising a head having an integral forwardly projecting portion of relatively reduced thickness and another projecting portion extending rearwardly from said head adjacent the top thereof and adapted for mounting the electrode on a holder, said head having a pair of upright side faces converging toward said forwardly projecting portion and a pair of upright rearwardly converging faces beneath the rearwardly extending projection, and

a tip carried by said forwardly projecting portion and adapted for engagement with the work, said head having forwardly converging cooling fluid passage portions extending thereinto from said rearwardly converging faces so as to form a continuous passage which extends at least part way into said forwardly projecting portion.

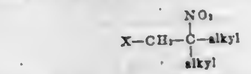
2,474,789
VARIABLE-SPEED DRIVE
Leslie Perhacs, North Hollywood, Calif.
Application June 1, 1945, Serial No. 597,071
1 Claim. (Cl. 192—48)



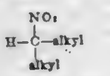
A clutch for selectively locking one of a pair of recessed pulleys on a hollow shaft presenting longitudinally spaced radial openings underlying the respective pulleys, comprising a ball floatingly mounted in each opening, and means for selectively moving said balls into engagement with said respective recesses whereby selectively to lock the pulleys on the shaft, comprising a mandrel axially slidably mounted in the shaft bore, said mandrel having an annular groove whose opposite side walls provide oppositely disposed curved cam surfaces engageable with the respective balls in response to axial movement of the mandrel in said bore, and a pair of spring-loaded detent means normally engaging the respective balls in directions axially of the shaft, each of said members being slidably mounted in an auxiliary bore in the shaft parallel with the first-mentioned bore.

2,474,790
GASKET CENTERING MEANS
Joseph Rossman, Washington, D. C., assignor to United States Gasket Company, Camden, N. J., a corporation of New Jersey
Application March 28, 1946, Serial No. 657,683
1 Claim. (Cl. 288—27)

A gasket assembly comprising a gasket formed of convolutely wound metal tape and a non-



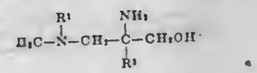
metallic packing strip interposed between the metal convolutions, and a substantially oval-shaped centering ring having diametrically opposed ear portions and diametrically opposed arc-shaped portions, said arc-shaped portions embracing said gasket, said centering ring being



formed of convolutely wound metal tape of a lesser number of convolutions than in said gasket and having a non-metallic packing strip interposed between said convolutions, said centering ring being laterally compressible to a greater degree than said gasket when the assembly is subjected to the same lateral compressive force.

2,474,791
NITROALKYL SUBSTITUTED HETEROCYCLIC COMPOUNDS AND PROCESS FOR PREPARING THEM
Murray Senkus, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a corporation of Maryland
No Drawing. Application February 26, 1945, Serial No. 579,897
10 Claims. (Cl. 260—247)

7. In a process for the preparation of nitroamines of the formula:



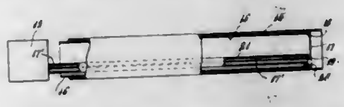
wherein X is a secondary amino radical of the group consisting of 1-pyrrolidyl, 1-morpholyl, 1-thiomorpholyl, 1-piperidyl, 1-(4-alkyl) piperazyl, and 1-(4-aryl) piperazyl, in which the carbon atoms ortho to the 1-N atom are substituted by a group consisting of hydrogen and alkyl, the process which comprises forming a homogeneous mixture of substantially equimolar proportions of formaldehyde, an amine of the group consisting of pyrrolidine, morpholine, thiomorpholine, piperidine, 4-alkyl piperazine, and 4-aryl piperazine, in which the carbon atoms ortho to the 1-N atom are substituted by a group consisting of hydrogen and alkyl, and a nitroalkane having the formula:

and allowing the mixture to stand under conditions avoiding any substantial loss of formaldehyde until the reaction has taken place, and recovering the nitroamine.

2,474,792
POLYAMINO ALCOHOLS AND METHOD FOR PREPARING THEM
Murray Senkus, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a corporation of Maryland
No Drawing. Application February 25, 1946, Serial No. 650,135
9 Claims. (Cl. 260—338)

1. As new compositions of matter, polyamino alcohols having the following structural formula:

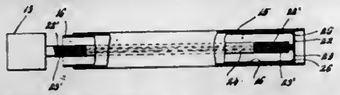
wherein R^1 is a member of the group consisting of alkyl and 3,5-dioxacyclohexyl, and R^2 is a member of the group consisting of hydrogen and alkyl.



2,474,793
PLASTICIZED ELASTOMER COMPOSITIONS CONTAINING N-(HYDROXYALKYL)-AMIDES AND THEIR FATTY ACID ESTERS
Philip F. Tryon, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a corporation of Maryland
No Drawing. Application January 8, 1945, Serial No. 571,965
4 Claims. (Cl. 260—32.2)

1. A composition comprising a synthetic rubber-like elastomer of the class consisting of 1,3-butadiene polymers and copolymers of butadiene polymerized with other monomers having the polymerizable structure

$$H_2C{=}C<$$



and 2-acetamido-2-methyl-1,3-propanediol diacetate the latter being present in plasticizing proportions.

2,474,794
ATTENUATOR
John M. van Beuren, Morristown, N. J., assignor to Measurements Corporation, Boonton, N. J.
Application January 17, 1944, Serial No. 518,645
5 Claims. (Cl. 178—44)

1. Electrical attenuator comprising two elongated coaxial conducting tubes, one sliding within the other, a coaxial shielded transmission line extending within the inner one of said tubes, in a longitudinal direction and adjacent to one wall of said inner tube, a measuring device connected to one end of said transmission line extending beyond the ends of said tubes, and a pickup conductor connected between the central conductor of said transmission line and a point upon the periphery of said inner tube, substantially 180 degrees removed from the portion of said tube which is most closely adjacent said transmission line, the outer conductor of said transmission line being connected to the portion of said inner tube to which it is most closely adjacent.

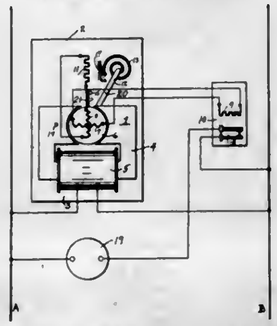
2,474,795
ATTENUATOR FOR HIGH-FREQUENCY PICKUP DEVICES
John M. van Beuren, Morristown, N. J., assignor to Measurements Corporation, Boonton, N. J., a corporation of New Jersey
Original application January 17, 1944; Serial No. 518,645. Divided and this application December 19, 1945, Serial No. 636,035
6 Claims. (Cl. 178—44)

2. Electrical attenuator including two conducting tubes, one sliding within the other, a shielded parallel 2-wire transmission line extending along the common axis of both said tubes, for connection to a measuring device at the end of said transmission line extending beyond the ends of said tubes, and two pickup conductors, respectively extending substantially radially, one from the other end of each conductor of said transmission line to a point upon the periphery of the inner one of said tubes, the points of connection of said respective pickup conductors to said inner tube being located substantially 180 degrees apart.

2,474,796
ALKYLAMINOALKYL ESTERS OF ALICYCLYL-ALICYCLIC CARBOXYLIC ACIDS
Marcus George Van Campen, Jr., Wyoming, and Charles Harmon Tilford, Silverton, Ohio, assignors to The Wm. S. Merrell Company, Cincinnati, Ohio, a corporation of Delaware
No Drawing. Application January 31, 1946, Serial No. 644,669
8 Claims. (Cl. 260—469)

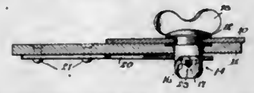
1. Amino alcohol esters of carboxy acids of the formula

$$RR_1COOH$$



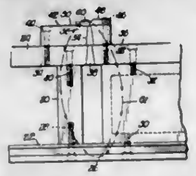
in which R and R_1 are alicyclic.

2,474,797
REPULSION SYNCHRONOUS MOTOR
Henry E. Warren, Ashland, Mass.
Application August 15, 1947, Serial No. 768,884
13 Claims. (Cl. 172—278)



1. A self-starting synchronous motor operable on alternating current and on direct current reversed at relatively long intervals, comprising a stator coil having an axial opening, a wheel-like rotor formed at least circumferentially of material of substantial magnetic remanence, said rotor disposed in the coil opening for rotation on an axis substantially perpendicular to the coil axis and being subject to polarization by the coil along a rotor diameter paralleling the coil axis, and magnetizable strip means including parallel portions oppositely extending in the direction axially of the coil in closely spaced relation to the rotor periphery and terminating within the coil to present dissimilar poles at diametrically opposite regions relative to the rotor axis, the terminal pole of one strip portion spaced from an intermediate section of the other strip portion in a direction making a wide angle to the coil axis, whereby repulsion between like poles in the rotor and in the strip means effects rotation of the rotor at increasing speed up to and maintained at synchrony with the current phase.

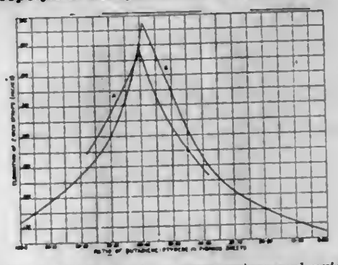
2,474,798
HEAT REGULATING APPARATUS
Robert Amsler, Zug, Switzerland, assignor to Landis & Gyr, A.-G., Zug, Switzerland, a body corporate of Switzerland
Application January 18, 1941, Serial No. 374,970
In Switzerland December 7, 1939
Sections 1, 3, 10, Public Law 690, August 8, 1946
Patent expires December 7, 1959
3 Claims. (Cl. 236—91)



1. A control apparatus for heating plants including in combination an internal thermostat, a resistance heater therefor, an external heater, an external induction regulator controlling the power supplied to the heaters, and a thermally responsive control for the regulator to increase the power supplied to the internal heater and to decrease the power supplied to the external heater as the external temperature increases.

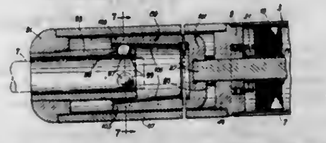
2,474,799
FASTENER
William Dzus, West Islip, N. Y.
Application August 29, 1944, Serial No. 551,660
1 Claim. (Cl. 24—221)

In a separable fastener of the type which includes a spiral cam stud and a receptacle which are interengageable upon the rotation of one with respect to another, an improved receptacle comprising an elongated spring metal strip having front and rear surfaces and formed with a flat attaching portion at one end with the remainder of the strip extending at a relatively small angle thereto in a rearward direction so that the opposite end of the strip is offset a short distance rearwardly with respect to the plane of the attaching portion, said opposite end being formed with an aperture large enough to accommodate the stud and having a locking bar for engaging the cam of the stud in association with said aperture and extending in a diametric direction.



2,474,800
MAGNETIC FIXTURE FOR HOLDING WORK TO BE GROUND
Richard G. Nill, Fort Wayne, Ind., assignor to Fort Wayne Tool, Die and Engineering Company, Fort Wayne, Ind., a partnership
Application January 19, 1946, Serial No. 642,328
10 Claims. (Cl. 51—216)

1. In a fixture, the combination of a base of magnetic material, a support of magnetic material disposed on said base, a work holder base disposed on said support, said work holder base and support being adapted to be magnetically connected to a magnetic power unit, said work holder base comprising a plurality of blocks of magnetic material separated but joined by non-magnetic material, one of said blocks being magnetically connected to said power unit and the other being magnetically connected to said support, a work holder supported on said work holder base and comprising spaced blocks of magnetic material, one of said blocks being magnetically connected to one of said first named blocks and the other of said blocks being magnetically connected to the other of said first named blocks, the blocks of said work holder being separated but connected by non-magnetic material aligned with and contacting the other non-magnetic material, an end gauge bar on said work holder blocks, and a top gauge bar of magnetic material secured to one of the work holder blocks and having an edge overlapping the non-magnetic material but spaced from the other work holder block, said work holder being adapted to receive metallic work so disposed on the work holder block which is spaced from the top gauge bar and overlying the non-magnetic material to engage said top gauge bar whereby when said power unit is energized, magnetic flux passes through one of the work holder base blocks, one of the work holder blocks, top gauge bar, work, the other of the work holder blocks, the other of the work holder base blocks, the support, and the base, back to the power unit to magnetically fixedly secure said work to said fixture.

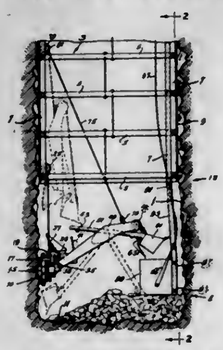


2,474,801
FIBROUS SHEETS FORMED FROM AN AQUEOUS SUSPENSION OF A MIXTURE OF FIBERS AND BUTADIENE-STYRENE COPOLYMER
Allen F. Owen, Beaver Falls, N. Y., assignor to Latex Fiber Industries, Inc., Beaver Falls, N. Y., a corporation of New York
Application September 15, 1945, Serial No. 616,605
4 Claims. (Cl. 92—3)

1. An article of manufacture comprising a sheet containing papermaking fibers and about 25 parts by weight of an emulsion polymerized copolymer of butadiene-1,3 and styrene per 100 parts by weight of papermaking fibers, said sheet being formed from an aqueous suspension of a mixture of papermaking fibers and dispersed particles of the copolymer of butadiene-1,3 and styrene in which the ratio of butadiene to styrene, by weight, is within the range from 50:50 to 70:30, said copolymer being mixed with said fibers while

said fibers are in aqueous suspension and prior to forming said fibers into a sheet.

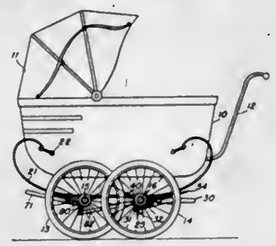
2,474,802
GAUGE FOR EXTERNAL MEASUREMENTS OF CYLINDRICAL BODIES
Foster M. Poole, Dallas, Tex.
Application July 18, 1946, Serial No. 684,556
4 Claims. (Cl. 33—178)



3. In a measuring instrument of the class described, a gage member consisting of an inside cone, a coaxial sleeve extending into said cone, said sleeve having an open end directed into the cone toward its smaller end and radial openings directed outward toward the wall of the cone, balls in said openings, a mechanism self-contained in the instrument connecting the gage member and the sleeve for coaxial movement and including a cylinder and piston providing an expansible chamber for an expanding medium, the gage being movable upon expansion of said chamber by said medium in a direction to move the small end of the cone toward said open end of the sleeve to push the balls inward with respect to the sleeve.

2,474,803
VERTICAL SHAFT EXCAVATING APPARATUS
Alvin A. Putnam, St. Louis, Mo.
Application May 10, 1947, Serial No. 747,217
7 Claims. (Cl. 214—134)

1. Excavating apparatus for sinking shafts in rock and the like, comprising a supporting structure, a traverse bar adjustable suspended from the supporting structure in the space below said structure and engageable with a side of the shaft, a traversing carriage on the traverse bar, a boom pivoted on the carriage, adjustable means extending from the supporting structure for suspending the boom at a desired angle, a shovel on the boom, means controllable by an operator at the bottom of the shaft for controlling the elevation of the traverse bar and also the boom suspension, means controllable by an operator on the carriage for traversing the carriage on the traverse bar and for controlling the operation of the shovel on the boom, the adjustable boom support comprising a sheave on the boom and a cable anchored toward one side of the shaft and passing

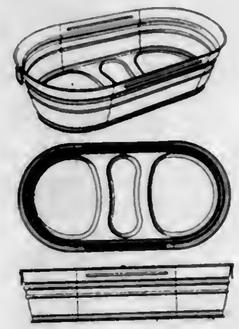


through the sheave to a winding reel towards the other side of the shaft, whereby when the carriage

is traversed the boom support will be effective in any traversed position of the boom.

2,474,804
ANTITIPPING DEVICE FOR BABY CARRIAGES
Hartley D. Schwarzbaum, New York, N. Y., assignor to Bilt-Rite Baby Carriage Co., Inc., Brooklyn, N. Y., a corporation of New York
Application February 18, 1947, Serial No. 729,343
3 Claims. (Cl. 280—47)

1. In a baby carriage provided with a frame, front and rear axles, wheels carried at the ends of said axles, and a brake for the wheels, the combination of a pivoted arm carried by the front axle and extending forwardly therefrom, and a similar arm carried by the rear axle and extending rearwardly therefrom, the outer ends of each of said arms being arranged to be conjointly moved from an elevated position through a relatively short arc to a downward position and to be locked in such latter position to prevent tipping of the carriage, a crank member rigidly secured



to the rear arm adjacent its pivot and extending downwardly therefrom, a crank member rigidly secured to the front arm adjacent its pivot and extending upwardly therefrom, a link connecting the outer ends of each of said crank members to produce downward movement of one arm when the other is depressed, a lock for retaining the arms in such downward position, and a depressible lever associated with the front axle for releasing said lock.

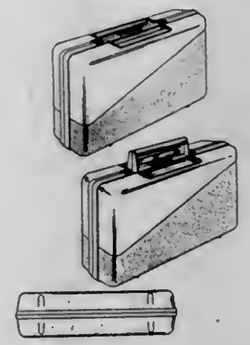
DESIGNS

JUNE 28, 1949

154,226
DESIGN FOR A TUB OR SIMILAR ARTICLE
William E. Ackermann, Wheeling, W. Va., assignor to Wheeling Steel Corporation, Wheeling, W. Va., a corporation of Delaware
Application April 26, 1948, Serial No. 145,959
Term of patent 14 years
(Cl. D49—1)

The ornamental design for a tub or similar article, substantially as shown.

154,227
DESIGN FOR A NAIL FILE
Jose Manuel Alvizua, New York, N. Y.
Application May 22, 1948, Serial No. 146,521
Term of patent 7 years
(Cl. D86—10)



The ornamental design for a nail file, as shown.

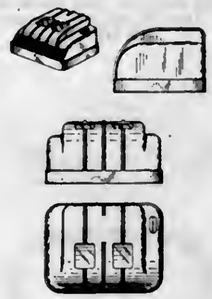
154,228
DESIGN FOR A PERFUME CONTAINER
William Appleby, Brooklyn, N. Y.
Application February 14, 1948, Serial No. 144,505
Term of patent 3½ years
(Cl. D86—10)

The ornamental design for a perfume container, substantially as shown.

154,229
DESIGN FOR A VALISE OR SIMILAR ARTICLE
Richard H. Arbib, Huntington Woods, Mich., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
Application December 9, 1947, Serial No. 143,058
Term of patent 14 years
(Cl. D87—5)

The ornamental design for a valise or similar article, substantially as shown and described.

154,230
DESIGN FOR A FRONT FOR A GOGGLE FRAME
Nicholas T. Baldanza, Rutherford, N. J., assignor to Columbia Protektosite Co., Inc., Carlstadt, N. J., a corporation of New Jersey
Application July 10, 1948, Serial No. 147,493
Term of patent 7 years
(Cl. D57—1)

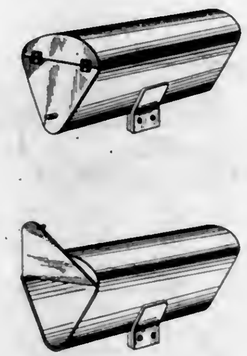


The ornamental design for a front for a goggle frame, as shown.

154,231
DESIGN FOR A CANDELABRUM
George R. Banker, Omaha, Nebr.
Application September 23, 1948, Serial No. 148,736
Term of patent 3½ years
(Cl. D48—2)

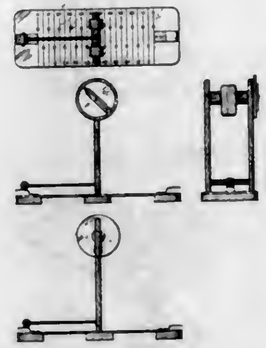
The ornamental design for a candelabrum, as shown.

154,232
DESIGN FOR A CASING HEAD FOR WEIGHING SCALES OR SIMILAR ARTICLE
George D. Barok, Columbus, Ohio
Application April 4, 1947, Serial No. 138,158
Term of patent 14 years
(Cl. D52—10)



The ornamental design for a casing head for weighing scales or similar article, substantially as shown.

154,233
DESIGN FOR A RING
Arthur David Bastien, Williamstown, Mass.
Application July 22, 1948, Serial No. 147,712
Term of patent 7 years
(Cl. D45—10)



The ornamental design for a ring, as shown

154,234
DESIGN FOR A MAILBOX
Anthony J. Batsler, Milwaukee, Wis.
Application May 13, 1947, Serial No. 139,020
Term of patent 14 years
(Cl. D74—9)

The ornamental design for a mail box, as shown.

154,235
DESIGN FOR A FOOTBALL GAME TOY
Samuel L. Beder, New York, N. Y.
Application February 21, 1947, Serial No. 137,069
Term of patent 7 years
(Cl. D34—5)

The ornamental design for a football game toy, substantially as shown and described.

154,236
DESIGN FOR A BADGE OR SIMILAR ARTICLE
Franklin Brook and Stanley Wager, Long Island City, N. Y., assignors to Bob Franklin, Inc., New York, N. Y., a corporation of New York
Application May 15, 1948, Serial No. 146,393
Term of patent 3½ years
(Cl. D29—2)

The ornamental design for a badge or similar article, substantially as shown.

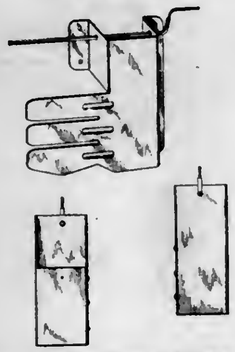
154,237
DESIGN FOR A BADGE OR SIMILAR ARTICLE
Franklin Brook and Stanley Wager, Long Island City, N. Y., assignors to Bob Franklin, Inc., New York, N. Y., a corporation of New York
Application May 15, 1948, Serial No. 146,394
Term of patent 3½ years
(Cl. D29—2)

The ornamental design for a badge or similar article, substantially as shown.

154,238
DESIGN FOR A BADGE OR SIMILAR ARTICLE
Franklin Brook and Stanley Wager, Long Island City, N. Y., assignors to Bob Franklin, Inc., New York, N. Y., a corporation of New York
Application May 15, 1948, Serial No. 146,395
Term of patent 3½ years
(Cl. D29—2)

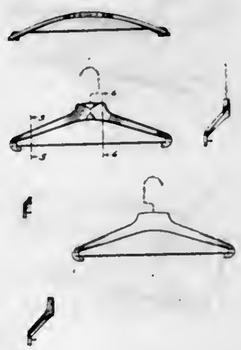
The ornamental design for a badge or similar article, substantially as shown.

154,239
DESIGN FOR A BADGE OR SIMILAR ARTICLE
Franklin Brook and Stanley Wager, Long Island City, N. Y., assignors to Bob Franklin, Inc., New York, N. Y., a corporation of New York
Application May 15, 1948, Serial No. 146,396
Term of patent 3½ years
(Cl. D29—2)



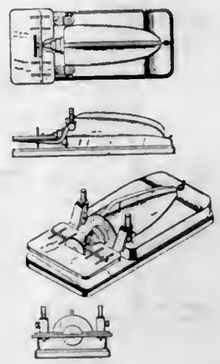
The ornamental design for a badge or similar article, substantially as shown.

154,240
DESIGN FOR A LINK CHAIN FOR A BRACELET OR SIMILAR ARTICLE
Michael Chernow, New York, N. Y.
Application February 19, 1949, Serial No. 962
Term of patent 14 years
(Cl. D45—4)



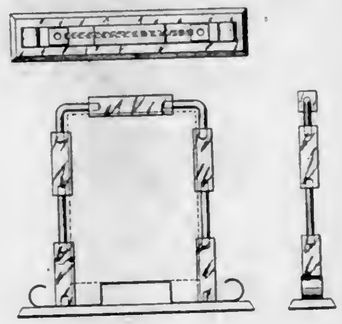
The ornamental design for a link chain for a bracelet or similar article, substantially as shown and described.

154,241
DESIGN FOR A REWINDING DEVICE FOR BANDAGE MATERIAL
Charles Cramer, Gardner, Kans., assignor to The Cramer Chemical Company, Gardner, Kans., a corporation of Kansas
Application January 30, 1948, Serial No. 144,177
Term of patent 14 years
(Cl. D41—1)



The ornamental design for a rewinding device for bandage material, substantially as shown.

154,242
DESIGN FOR A GARMENT HANGER
Walton B. Crane, Beverly Hills, and Morris Treiman, Los Angeles, Calif., assignors to Allied Plastics Company, Los Angeles, Calif., a corporation of California
Application September 8, 1947, Serial No. 141,247
Term of patent 3½ years
(Cl. D80—8)

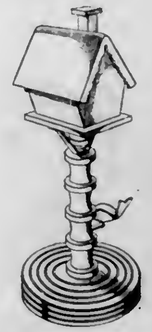


The ornamental design for a garment hanger, substantially as shown and described.

154,243
DESIGN FOR A GRINDER
Howard Harold Crawford, Las Vegas, Nev.
Application June 21, 1948, Serial No. 147,097
Term of patent 3½ years
(Cl. D37—1)

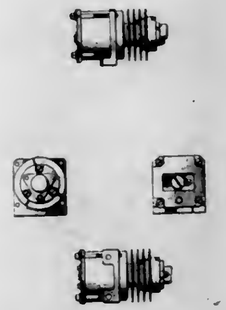
The ornamental design for a grinder, as shown.

154,244
DESIGN FOR A PICTURE FRAME OR SIMILAR ARTICLE
Gerald D'Angelo, New York, N. Y.
Application April 14, 1948, Serial No. 145,724
Term of patent 3½ years
(Cl. D29—20)



The ornamental design for a picture frame or similar article, substantially as shown and described.

154,245
DESIGN FOR A LAMP
John F. Davidson, Linden, N. J.
Application March 1, 1948, Serial No. 144,849
Term of patent 14 years
(Cl. D48—20)



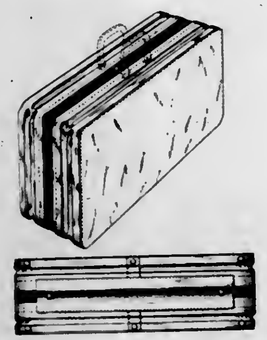
623 O. G.—78

154,245—Continued

The ornamental design for a lamp, as shown.

154,246
DESIGN FOR A CARBON PILE REGULATOR OR SIMILAR ARTICLE
Earle Rhea Davis, Teaneck, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application April 23, 1945, Serial No. 119,142
Term of patent 14 years
(Cl. D26—13)

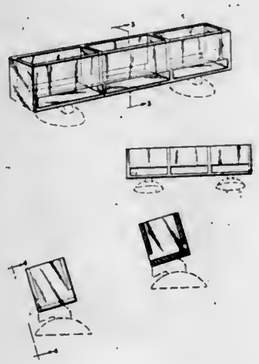
The ornamental design for a carbon pile regulator or similar article, as shown.



154,247
DESIGN FOR A HAND LUGGAGE CASE OR THE LIKE

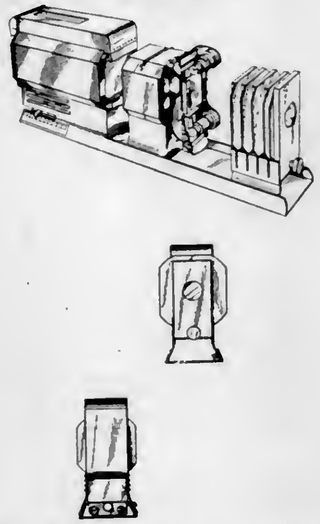
154,249
DESIGN FOR A PROJECTION LANTERN
Charles F. Dutton, Rocky River, Ohio

154,251
DESIGN FOR A SWEATER OR SIMILAR ARTICLE
Bernard Ehrenreich, New York, N. Y.



154,253
DESIGN FOR A SWEATER OR SIMILAR ARTICLE
Bernard Ehrenreich, New York, N. Y.
Application September 17, 1948, Serial No. 148,632

154,247
DESIGN FOR A HAND LUGGAGE CASE OR THE LIKE
Charles Doppelt, Chicago, Ill.
Application May 7, 1947, Serial No. 138,868
Term of patent 14 years
(Cl. D87—5)



The ornamental design for a hand luggage case or the like, as shown and described.

154,248
DESIGN FOR A CIGARETTE PACKAGE RACK
Neal E. Durbin, Seattle, Wash.
Application January 10, 1948, Serial No. 143,658
Term of patent 14 years
(Cl. D85—2)

The ornamental design for a cigarette package rack, as shown, and described.

154,249
DESIGN FOR A PROJECTION LANTERN
Charles F. Dutton, Rocky River, Ohio
Application February 4, 1948, Serial No. 144,269
Term of patent 14 years
(Cl. D61—1)

The ornamental design for a projection lantern, as shown and described.

154,250
DESIGN FOR A PRINTED FABRIC
Bernard Eckstein, New York, N. Y., assignor to The B. V. D. Corporation, New York, N. Y., a corporation of Delaware
Application June 22, 1948, Serial No. 147,115
Term of patent 3½ years
(Cl. D92—1)

The ornamental design for a printed fabric, as shown and described.

154,251
DESIGN FOR A SWEATER OR SIMILAR ARTICLE
Bernard Ehrenreich, New York, N. Y.
Application August 17, 1948, Serial No. 148,151
Term of patent 3½ years
(Cl. D3—4)

The ornamental design for a sweater or similar article, substantially as shown and described.

154,252
DESIGN FOR A SWEATER OR SIMILAR ARTICLE
Bernard Ehrenreich, New York, N. Y.
Application September 17, 1948, Serial No. 148,631
Term of patent 3½ years
(Cl. D3—4)

The ornamental design for a sweater or similar article, substantially as shown and described.

154,253
DESIGN FOR A SWEATER OR SIMILAR ARTICLE
Bernard Ehrenreich, New York, N. Y.
Application September 17, 1948, Serial No. 148,632
Term of patent 3½ years
(Cl. D3—4)

The ornamental design for a sweater or similar article, substantially as shown and described.

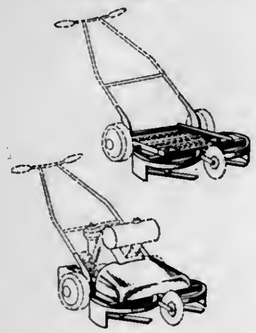
154,254
DESIGN FOR A SWEATER OR SIMILAR ARTICLE
Bernard Ehrenreich, New York, N. Y.
Application September 17, 1948, Serial No. 148,633
Term of patent 3½ years
(Cl. D3—4)

The ornamental design for a sweater or similar article, substantially as shown and described.

154,255
DESIGN FOR A COMBINED TOOTHBRUSH

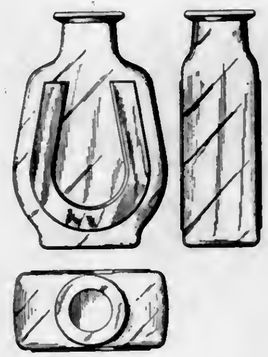
154,257
DESIGN FOR A BOTTLE

154,259



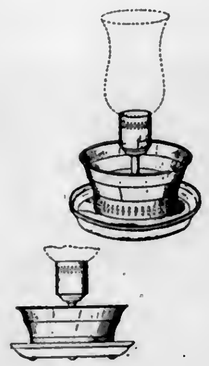
154,261
DESIGN FOR A LIQUID DISPENSING VALVE

154,255
DESIGN FOR A COMBINED TOOTHBRUSH, CONTAINER AND HOLDER
William B. England, Oakland, Calif., assignor to Charles D. Beatie, San Francisco, Calif.
Application May 19, 1947, Serial No. 139,135
Term of patent 3½ years
(Cl. D9—2)



The ornamental design for a combined toothbrush, container and holder, as shown.

154,256
DESIGN FOR A LAWN MOWER
Robert H. Ensign, New York, N. Y., assignor to John A. Roebling's Sons Company, Trenton, N. J., a corporation of New Jersey
Application November 14, 1946, Serial No. 134,775
Term of patent 14 years
(Cl. D40—1)



The ornamental design for a lawn mower, as shown and described.

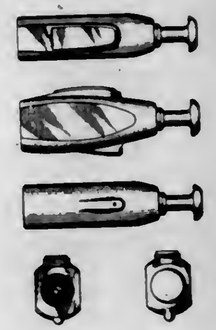
154,257
DESIGN FOR A BOTTLE
Richard Estrin, Hewlett, N. Y.
Application July 22, 1947, Serial No. 140,450
Term of patent 14 years
(Cl. D58—6)

The ornamental design for a bottle, as shown.

154,258
DESIGN FOR A HURRICANE LAMP
Albert E. Frontier, Des Plaines, Ill.
Application November 29, 1947, Serial No. 142,884
Term of patent 3½ years
(Cl. D48—20)

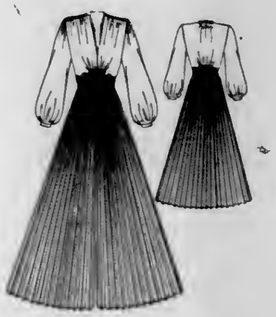
The ornamental design for a hurricane lamp, as shown and described.

154,259
DESIGN FOR A RUBBER PLAY BALL
Joseph M. Gapstur and Richard E. Long, Ashland, Ohio
Application June 12, 1947, Serial No. 139,602
Term of patent 14 years
(Cl. D34—15)



The ornamental design for a rubber play ball, as shown and described.

154,260
DESIGN FOR A RUBBER PLAY BALL
Joseph M. Gapstur, John W. Booker, and Charles W. Ebert, Ashland, Ohio
Application January 19, 1948, Serial No. 143,885
Term of patent 14 years
(Cl. D34—15)



The ornamental design for a rubber play ball, as shown.

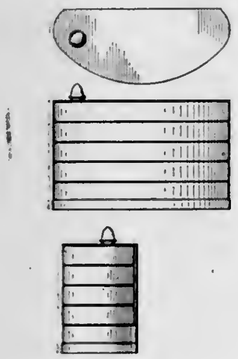
154,261
DESIGN FOR A LIQUID DISPENSING VALVE
Burdette B. Gilmore, Pelham Manor, N. Y., assignor to West Disinfecting Company, Long Island City, N. Y., a corporation of New York
Application June 28, 1947, Serial No. 139,993
Term of patent 14 years
(Cl. D4—3)

The ornamental design for a liquid dispensing valve, substantially as shown.

154,262
DESIGN FOR A NEGLIGEE
Violet Giovagnoni, New York, N. Y.
Application October 30, 1948, Serial No. 149,408
Term of patent 7 years
(Cl. D3—26)

The ornamental design for a negligee, substantially as shown.

154,267
DESIGN FOR A TEXTILE FABRIC OR

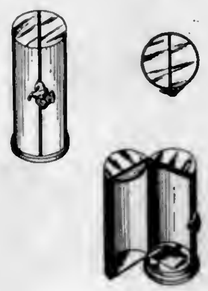


154,269
DESIGN FOR A TEXTILE FABRIC OR

154,263
DESIGN FOR A FLASK
Maurice Goldberg, Paris, France
Application April 2, 1947, Serial No. 138,121
In France October 3, 1946
Term of patent 7 years
(Cl. D58—9)

The ornamental design for a flask, as shown.

154,264
DESIGN FOR A STAND OF DRAWERS
Philip G. Goldman, Pittsburgh, Pa.
Application December 5, 1947, Serial No. 142,959
Term of patent 14 years
(Cl. D33—19)



The ornamental design for a stand of drawers as shown.

154,265
DESIGN FOR A COMBINATION TOBACCO HUMIDOR AND PIPE TRAY
Joseph Gottlieb, New York, N. Y.
Application September 4, 1948, Serial No. 148,483
Term of patent 3½ years
(Cl. D85—8)

The ornamental design for a combination tobacco humidor and pipe tray, as shown.

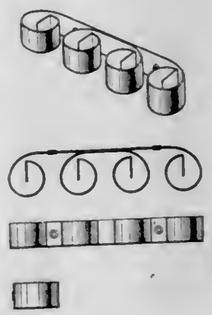
154,266
DESIGN FOR A PERFUME DISPLAY BOX
Elizabeth N. Graham, New York, N. Y.
Application November 20, 1947, Serial No. 142,673
Term of patent 14 years
(Cl. D80—5)

The ornamental design for a perfume display box, substantially as shown and described.

154,267
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Marion R. Hamre, Oceanside, N. Y.
Application May 12, 1948, Serial No. 146,317
Term of patent 3½ years
(Cl. D92—1)

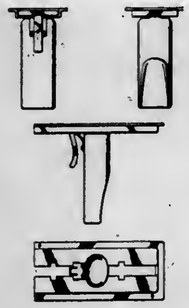
The ornamental design for a textile fabric or similar article, as shown and described.

154,268
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Marion R. Hamre, Oceanside, N. Y.
Application July 2, 1948, Serial No. 147,339
Term of patent 3½ years
(Cl. D92—1)



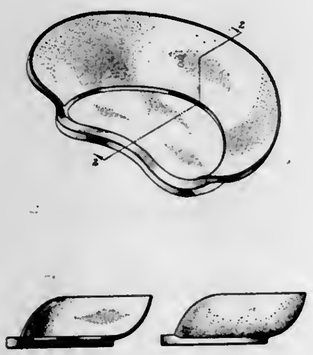
The ornamental design for a textile fabric or similar article, as shown and described.

154,269
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Marion R. Hamre, Oceanside, N. Y.
Application July 2, 1948, Serial No. 147,340
Term of patent 3½ years
(Cl. D92—1)



The ornamental design for a textile fabric or similar article, as shown and described.

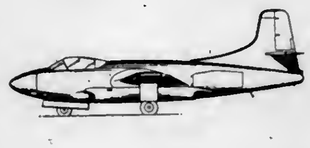
154,270
DESIGN FOR A HOLDER FOR BROOMS OR THE LIKE
Clarence Lewis Hawn, St. Paul, Minn.
Application July 21, 1947, Serial No. 140,410
Term of patent 14 years
(Cl. D9—2)



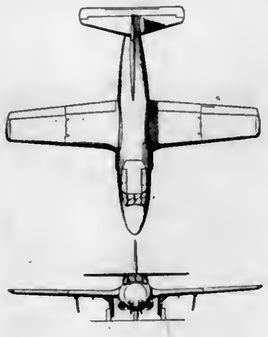
The ornamental design for a holder for brooms or the like, as shown.

154,271
DESIGN FOR A GUARD FOR CHILD'S CHAIR
Jacob G. Heim, San Gabriel, Calif.
Application June 9, 1947, Serial No. 139,551
Term of patent 14 years
(Cl. D15—1)

The ornamental design for a guard for child's chair, as shown.

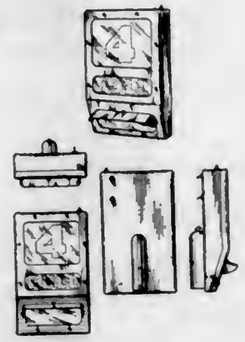


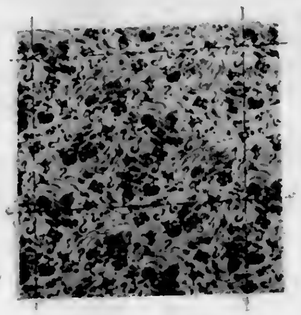
154,272
DESIGN FOR A TRAY FOR CHILD'S CHAIR
Jacob G. Heim, San Gabriel, Calif.
Application June 16, 1947, Serial No. 139,728
Term of patent 14 years
(Cl. D15—1)



The ornamental design for a tray for child's chair, as shown.

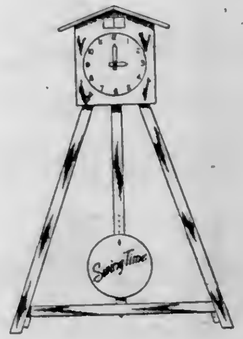
154,273
DESIGN FOR AN AIRPLANE
Edward H. Heinemann and Leo J. Devlin, Los Angeles, Calif., assignors to Douglas Aircraft Company, Inc., Santa Monica, Calif.
Application December 6, 1947, Serial No. 143,000
Term of patent 7 years
(Cl. D71—1)



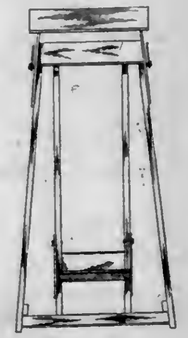


The ornamental design for an airplane, substantially as shown.

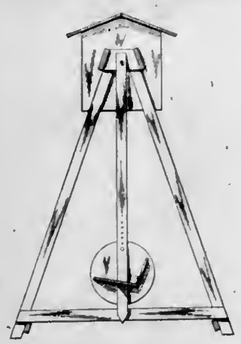
154,274
DESIGN FOR A COMBINATION RAMP IDENTIFICATION AND DRIVEWAY FLOOD-LIGHT FOR DRIVE-IN THEATRES OR THE LIKE
George P. Heller, Kansas City, Mo.
Application November 29, 1948, Serial No. 149,866
Term of patent 14 years
(Cl. D72—1)



The ornamental design for a combination ramp identification and driveway flood light for drive-in theatres or the like, substantially as shown and described.

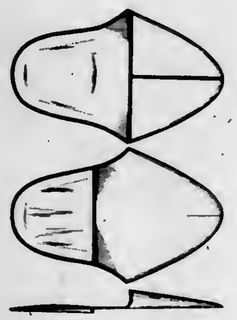


154,275
DESIGN FOR A TEXTILE FABRIC
Howard Horn, New York, N. Y.
Application April 16, 1948, Serial No. 145,761
Term of patent 3½ years
(Cl. D92—1)

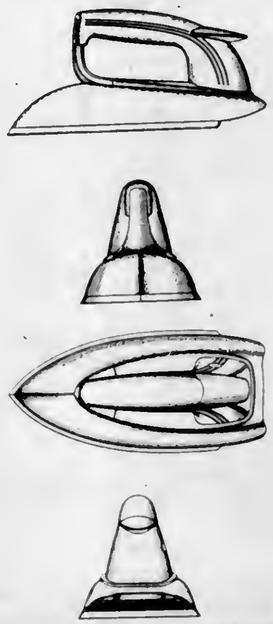


The ornamental design for a textile fabric, substantially as shown and described.

154,276
DESIGN FOR A SWING OR SIMILAR ARTICLE
Stanley E. Jones, Cleveland, Ohio
Application August 12, 1947, Serial No. 140,828
Term of patent 7 years
(Cl. D15—11)



154,276—Continued



The ornamental design for a swing or similar article, substantially as shown.

154,277
DESIGN FOR A COMBINED TOE PROTECTOR AND METATARSAL SUPPORT
Lena Karlen, Great Neck, N. Y.
Application November 27, 1948, Serial No. 149,854
Term of patent 7 years
(Cl. D7—7)

The ornamental design for a combined toe protector and metatarsal support, substantially as shown.

154,278
DESIGN FOR AN ELECTRIC IRON
Clarence Karstadt, Glen Ellyn, Ill., assignor to Birtman Electric Company, a corporation of Illinois
Application February 28, 1947, Serial No. 137,235
Term of patent 14 years
(Cl. D49—6)

The ornamental design for an electric iron, as shown.

154,279
DESIGN FOR A SEPARABLE BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 19, 1949, Serial No. 321
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a separable brooch or similar article, substantially as shown.

154,280
DESIGN FOR A PIN CLIP OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 19, 1949, Serial No. 322
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a pin clip or similar article, substantially as shown.

154,281
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 19, 1949, Serial No. 329
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

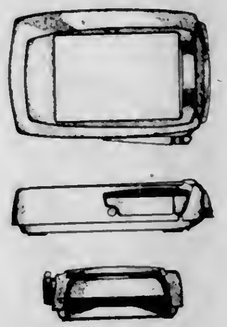
154,282
DESIGN FOR A FINDING FOR JEWELRY
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 22, 1949, Serial No. 400
Term of patent 7 years
(Cl. D45—1)

The ornamental design for a finding for jewelry, substantially as shown.

154,283
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 29, 1949, Serial No. 570
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

154,284
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 2, 1949, Serial No. 639
Term of patent 7 years
(Cl. D45—19)

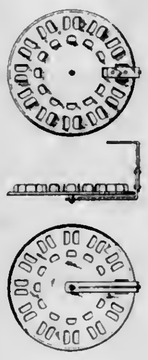


The ornamental design for a brooch or similar article, substantially as shown.

154,285
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 2, 1949, Serial No. 644
Term of patent 7 years
(Cl. D45—19)

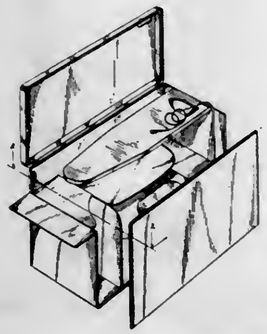
The ornamental design for a brooch or similar article, substantially as shown.

154,286
DESIGN FOR AN AUTOGRAPHIC REGISTER
Russell Katz, Hamilton, Ohio, assignor to Paul Benninghofen and Eleanor C. Diesbach, both of Hamilton, Ohio, trustees
Application September 30, 1947, Serial No. 141,668
Term of patent 14 years
(Cl. D74—5)



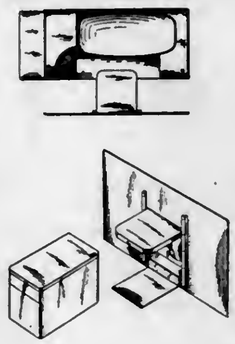
The ornamental design for an autographic register, substantially as shown.

154,290
DESIGN FOR A LADY'S SHOE OR SIMILAR



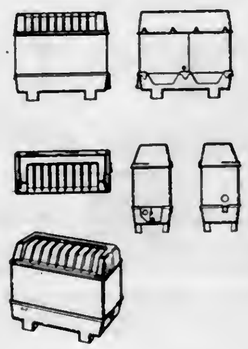
154,292
DESIGN FOR A SPOON OR OTHER ARTICLE

154,287
DESIGN FOR A HOLDER FOR CONDIMENT CONTAINERS
Jack Kauffman, Los Angeles and Richard V. Smith, Glendale, Calif.
Application September 15, 1947, Serial No. 141,413
Term of patent 14 years
(Cl. D44—26)

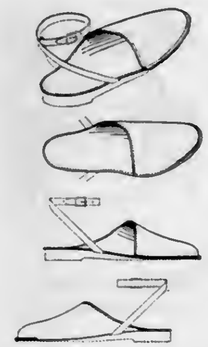


The ornamental design for a holder for condiment containers, substantially as shown.

154,288
DESIGN FOR AN IRONING CABINET
Grace E. Kennedy, Toronto, Ontario, Canada
Application June 11, 1947, Serial No. 139,578
Term of patent 14 years
(Cl. D49—1)



154,288—Continued

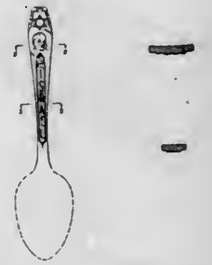


The ornamental design for an ironing cabinet, as shown.

154,289
DESIGN FOR A HEATING STOVE
Harry G. Lankford, Jr., Wichita, Kans.
Application November 28, 1947, Serial No. 142,852
Term of patent 3½ years
(Cl. D81—19)

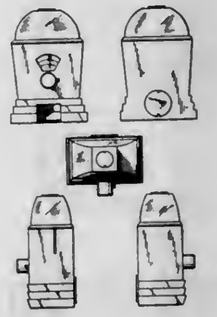
The ornamental design for a heating stove, substantially as shown.

154,290
DESIGN FOR A LADY'S SHOE OR SIMILAR ARTICLE
David E. Levin, Brooklyn, N. Y., assignor to I. Miller & Sons, Inc., Long Island City, N. Y., a corporation of New York
Application November 6, 1947, Serial No. 142,355
Term of patent 3½ years
(Cl. D7—7)



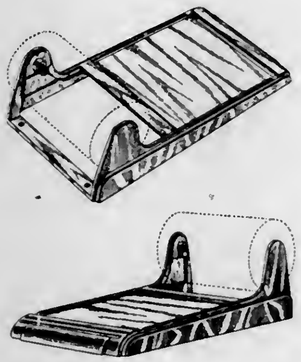
The ornamental design for a lady's shoe or similar article, substantially as shown and described.

154,291
DESIGN FOR A BEVERAGE DISPENSER
Jacob Levin, New York, N. Y.
Application August 19, 1947, Serial No. 140,947
Term of patent 14 years
(Cl. D2—3)



The ornamental design for a beverage dispenser, as shown and described.

154,292
DESIGN FOR A SPOON OR OTHER ARTICLE OF FLATWARE
Abraham Litvin, New Haven, Conn.
Application June 9, 1948, Serial No. 146,841
Term of patent 3½ years
(Cl. D54—12)

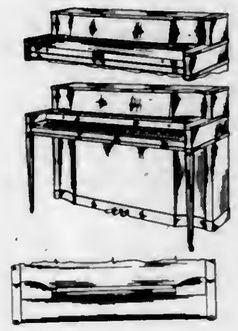


The ornamental design for a spoon or other article of flatware, substantially as shown and described.

154,293
DESIGN FOR A TOY ARTICLE-DISPENSING DEVICE
Jacob Markoe, Brooklyn, N. Y., assignor to Select Jewelry Mfg. Co. Inc., Long Island City, N. Y., a corporation of New York
Application May 1, 1948, Serial No. 146,110
Term of patent 7 years
(Cl. D52—3)

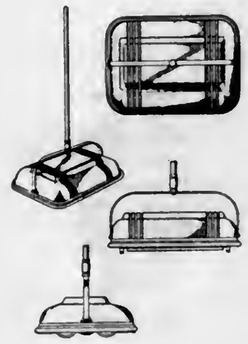
The ornamental design for a toy article-dispensing device, substantially as shown.

154,294
DESIGN FOR A MEMORANDUM PAD OR SIMILAR ARTICLE
Nicholas Marlow, Chicago, Ill.
Application January 31, 1948, Serial No. 144,200
Term of patent 14 years
(Cl. D74—5)



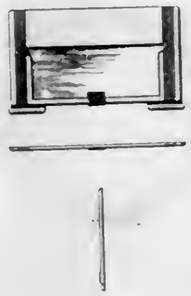
The ornamental design for a memorandum pad or similar article, as shown and described.

154,295
DESIGN FOR AN ASH TRAY OR SIMILAR ARTICLE
John J. McCabe, New York, N. Y.
Application October 30, 1947, Serial No. 142,220
Term of patent 3½ years
(Cl. D85—2)



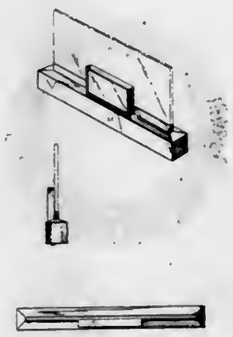
The ornamental design for an ash tray or similar article, substantially as shown.

154,296
DESIGN FOR A PIANO
William Millington, Grand Rapids, Mich., and Wilbur M. Day, Norwood, Ohio, assignors to The Baldwin Company, Cincinnati, Ohio, a corporation of Ohio
Application September 10, 1948, Serial No. 148,535
Term of patent 14 years
(Cl. D56—9)



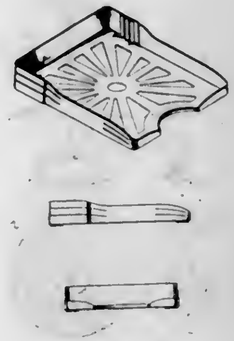
The ornamental design for a piano, substantially as shown.

154,297
DESIGN FOR A CARPET SWEEPER
Thomas M. Mock and Harold H. Weber, Beverly Hills, Calif.
Application January 17, 1949, Serial No. 267
Term of patent 14 years
(Cl. D9—2)



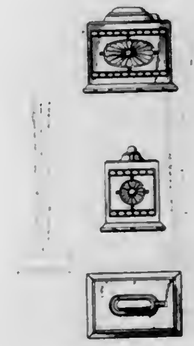
The ornamental design for a carpet sweeper, as shown.

154,298
DESIGN FOR A CALENDAR STAND OR SIMILAR ARTICLE
Carlyle N. Montanye, Baltimore, Md.
Application February 18, 1948, Serial No. 144,576
Term of patent 14 years
(Cl. D74—5)



The ornamental design for a calendar stand or similar article, as shown and described.

154,299
DESIGN FOR A DISPLAY SIGN
Jack Morgan, Chicago, Ill., assignor to Price Brothers, Inc., Chicago, Ill., a corporation of Illinois
Application March 28, 1947, Serial No. 138,012
Term of patent 7 years
(Cl. D1—12)



The ornamental design for a display sign, substantially as shown and described.

154,300
DESIGN FOR A LETTER TRAY OR SIMILAR ARTICLE
Bert M. Morris, Los Angeles, Calif.
Application May 27, 1948, Serial No. 146,643
Term of patent 14 years
(Cl. D74—9)

The ornamental design for a letter tray or similar article, substantially as shown and described.

154,301
DESIGN FOR A TABLE LIGHTER
Harry Negbaur, New York, N. Y., assignor to H. Negbaur & Co., New York, N. Y., a partnership
Application February 19, 1949, Serial No. 957
Term of patent 3½ years
(Cl. D48—27)

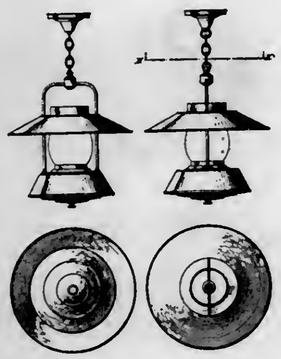
The ornamental design for a table lighter, as shown.

154,302
DESIGN FOR A CLOCK
Ernest Ingraham, Bridgeport, Conn., assignor to Ingraham Corporation, Bridgeport, Conn., a corporation of Connecticut
Application March 31, 1948, Serial No. 145,124
Term of patent 14 years
(Cl. D10—1)

The ornamental design for a clock, substantially as shown.

154,303
DESIGN FOR A CLOCK
Ernest Ingraham, Bridgeport, Conn., assignor to Ingraham Corporation, Bridgeport, Conn., a corporation of Connecticut
Application March 31, 1948, Serial No. 145,125
Term of patent 14 years
(Cl. D10—1)

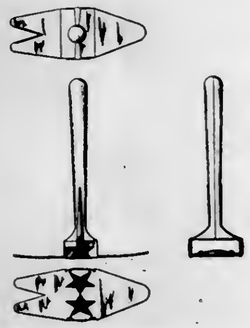
The ornamental design for a clock, substantially as shown.



154,304
DESIGN FOR A CLOCK
Ernest Ingraham, Bridgeport, Conn., assignor to Ingraham Corporation, Bridgeport, Conn., a corporation of Connecticut
Application March 31, 1948, Serial No. 145,126
Term of patent 14 years
(Cl. D10—1)

The ornamental design for a clock, substantially as shown.

154,305
DESIGN FOR A CLOCK
Ernest Ingraham, Bridgeport, Conn., assignor to Ingraham Corporation, Bridgeport, Conn., a corporation of Connecticut
Application March 31, 1948, Serial No. 145,127
Term of patent 14 years
(Cl. D10—1)



The ornamental design for a clock, substantially as shown.

154,302
DESIGN FOR A LIGHTING FIXTURE
Norman E. Palmquist, Topeka, Kans.
Application September 27, 1948, Serial No. 148,792
Term of patent 3½ years
(Cl. D48—23)

The ornamental design for a lighting fixture, as shown.

154,303
DESIGN FOR A GARDEN TOOL
George Pavlinetz, Carteret, N. J.
Application December 11, 1947, Serial No. 143,098
Term of patent 14 years
(Cl. D35—2)

The ornamental design for a garden tool, as shown.

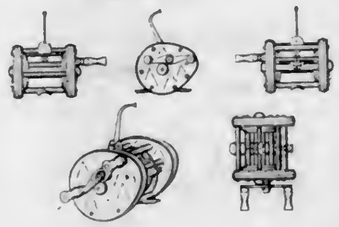
154,304
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application January 8, 1949, Serial No. 143
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

154,305
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application January 18, 1949, Serial No. 302
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

154,306
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application February 16, 1949, Serial No. 888
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

154,307
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application February 16, 1949, Serial No. 889
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

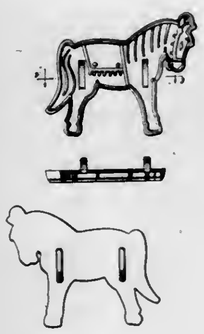
154,308
DESIGN FOR A FISHING REEL
Othmar W. Pies, Cincinnati, Ohio, assignor to Aqua-Sportsman, Inc., Norwood, Ohio, a corporation of Ohio
Application October 29, 1946, Serial No. 134,374
Term of patent 14 years
(Cl. D31—4)

The ornamental design for a fishing reel, as shown.

154,309
DESIGN FOR A COOKIE CUTTER
Stanley W. Price and Rebecca C. Price, Oklahoma City, Okla.
Application August 21, 1947, Serial No. 140,976
Term of patent 7 years
(Cl. D44—29)

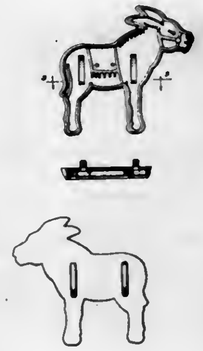
The ornamental design for a cookie cutter, substantially as shown.

154,310
DESIGN FOR A COOKIE CUTTER
Stanley W. Price and Rebecca C. Price, Oklahoma City, Okla.
Application August 21, 1947, Serial No. 140,977
Term of patent 7 years
(Cl. D44—29)



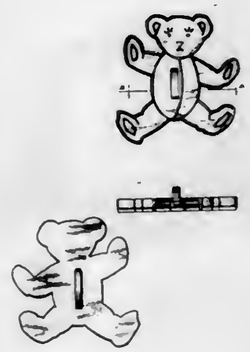
The ornamental design for a cookie cutter, substantially as shown.

154,311
DESIGN FOR A COOKIE CUTTER
Stanley W. Price and Rebecca C. Price,
Oklahoma City, Okla.
Application August 21, 1947, Serial No. 140,978
Term of patent 7 years
(Cl. D44—29)



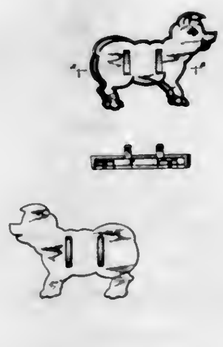
The ornamental design for a cookie cutter, substantially as shown.

154,312
DESIGN FOR A COOKIE CUTTER
Stanley W. Price and Rebecca C. Price,
Oklahoma City, Okla.
Application August 21, 1947, Serial No. 140,979
Term of patent 7 years
(Cl. D44—29)



The ornamental design for a cookie cutter, substantially as shown.

154,313
DESIGN FOR A COOKIE CUTTER
Stanley W. Price and Rebecca C. Price,
Oklahoma City, Okla.
Application August 21, 1947, Serial No. 140,980
Term of patent 7 years
(Cl. D44—29)



The ornamental design for a cookie cutter, substantially as shown.

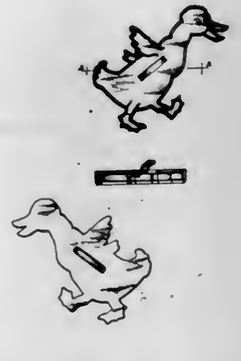
154,314
DESIGN FOR A COOKIE CUTTER
Stanley W. Price and Rebecca C. Price,
Oklahoma City, Okla.
Application November 6, 1947, Serial No. 142,321
Term of patent 7 years
(Cl. D44—29)

The ornamental design for a cookie cutter, substantially as shown.

154,315
DESIGN FOR A COOKIE CUTTER
Stanley W. Price and Rebecca C. Price,
Oklahoma City, Okla.
Application November 6, 1947, Serial No. 142,322
Term of patent 3½ years
(Cl. D44—29)

The ornamental design for a cookie cutter, substantially as shown.

154,316
DESIGN FOR A COOKIE CUTTER
Stanley W. Price and Rebecca C. Price,
Oklahoma City, Okla.
Application November 6, 1947, Serial No. 142,323
Term of patent 7 years
(Cl. D44—29)

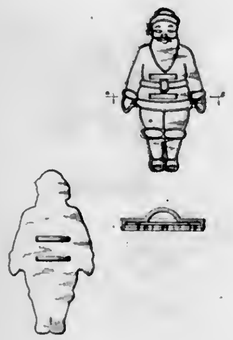


The ornamental design for a cookie cutter, substantially as shown.

154,317
DESIGN FOR A COOKIE CUTTER
Stanley W. Price and Rebecca C. Price,
Oklahoma City, Okla.
Application November 6, 1947, Serial No. 142,324
Term of patent 7 years
(Cl. D44—29)

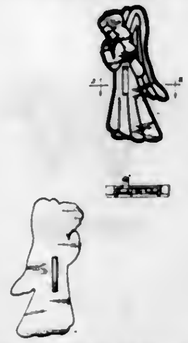
The ornamental design for a cookie cutter, substantially as shown.

154,318
DESIGN FOR A COOKIE CUTTER
Stanley W. Price and Rebecca C. Price,
Oklahoma City, Okla.
Application November 6, 1947, Serial No. 142,325
Term of patent 7 years
(Cl. D44—29)



The ornamental design for a cookie cutter, substantially as shown.

154,319
DESIGN FOR A COOKIE CUTTER
Stanley W. Price and Rebecca C. Price, Oklahoma City, Okla.
Application November 6, 1947, Serial No. 142,326
Term of patent 3½ years
(Cl. D44—29)



The ornamental design for a cookie cutter, substantially as shown.

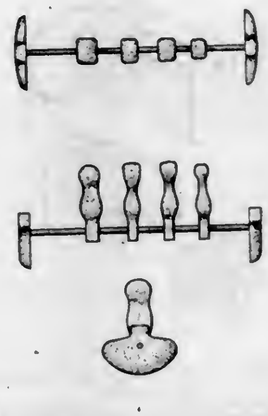
154,320
DESIGN FOR A COOKIE CUTTER
Stanley W. Price and Rebecca C. Price, Oklahoma City, Okla.
Application November 6, 1947, Serial No. 142,327
Term of patent 7 years
(Cl. D44—29)

The ornamental design for a cookie cutter, substantially as shown.

154,321
DESIGN FOR A COOKIE CUTTER
Stanley W. Price and Rebecca C. Price, Oklahoma City, Okla.
Application November 6, 1947, Serial No. 142,328
Term of patent 7 years
(Cl. D44—29)

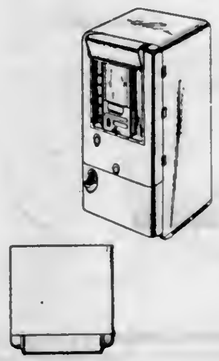
The ornamental design for a cookie cutter, substantially as shown.

154,322
DESIGN FOR A SALES METER REGISTER
Charles F. Ramsay, Toronto, Ontario, Canada
Application December 24, 1947, Serial No. 143,329
Term of patent 14 years
(Cl. D74—5)



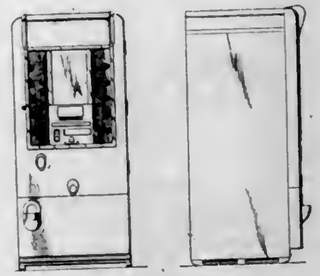
The ornamental design for a sales meter register, as shown and described.

154,323
DESIGN FOR A CHILD'S TEETER
James H. Reed, Detroit, Mich.
Application February 27, 1948, Serial No. 144,792
Term of patent 7 years
(Cl. D34—15)



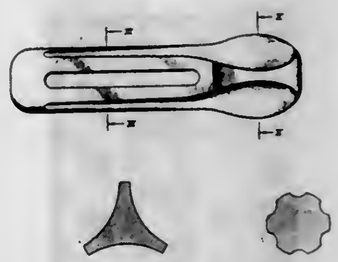
The ornamental design for a child's teeter, as shown.

154,324
DESIGN FOR A TOE NAIL POLISHING DEVICE
Patricia Reid, Chicago, Ill.
Application February 17, 1948, Serial No. 144,531
Term of patent 14 years
(Cl. D86—10)

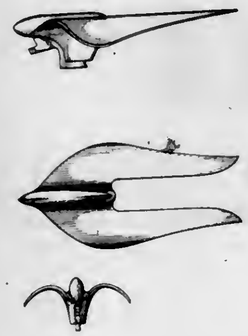


The ornamental design for a toe nail polishing device, as shown.

154,325
DESIGN FOR A DISPENSING MACHINE
Henry T. Roberts, Chicago, Ill., assignor to United States Vending Corporation, Chicago, Ill., a corporation of Delaware
Application January 22, 1948, Serial No. 143,985
Term of patent 3½ years
(Cl. D52—3)



154,325—Continued

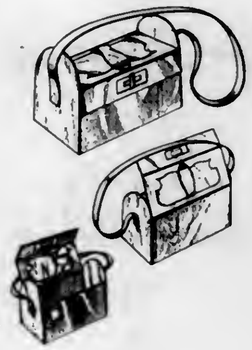


The ornamental design for a dispensing machine, substantially as shown.

154,326
DESIGN FOR A NONROLLING TORQUE TOOL HANDLE
Hudson B. Roysher, Los Angeles, Calif.
Application November 29, 1947, Serial No. 142,873
Term of patent 14 years
(Cl. D93—4)

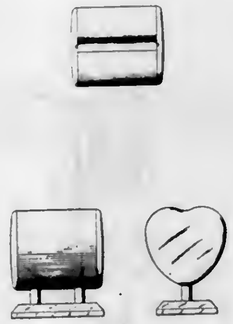
The ornamental design for a nonrolling torque tool handle, substantially as shown.

154,327
DESIGN FOR AN AUTOMOBILE HOOD ORNAMENT
Alfred R. Russell, St. Clair Shores, Mich.
Application July 16, 1948, Serial No. 147,618
Term of patent 7 years
(Cl. D14—18)



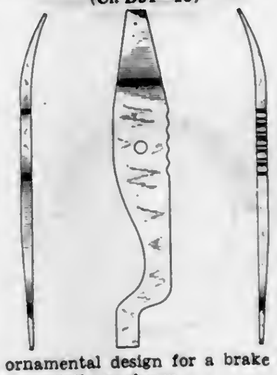
The ornamental design for an automobile hood ornament, substantially as shown.

154,328
DESIGN FOR A TILE FLOOR AND WALL COVERING
John E. Ryan, Danbury, Conn.
Application September 29, 1948, Serial No. 148,833
Term of patent 14 years
(Cl. D18—2)



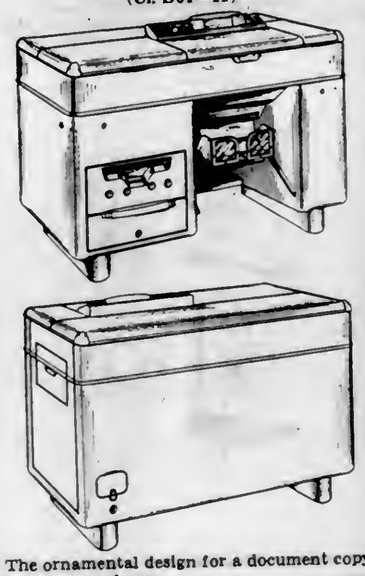
The ornamental design for a tile floor and wall covering, as shown and described.

154,329
DESIGN FOR A COMBINED HANDBAG AND SPECTACLE HOLDER
Ann Rose Schiff, Columbus, Ohio
Application August 27, 1948, Serial No. 148,341
Term of patent 14 years
(Cl. D87—3)



The ornamental design for a combined handbag and spectacle holder, substantially as shown and described.

154,330
DESIGN FOR A COMBINED CIGARETTE HOLDER AND DISPENSER
Maurice J. Schipper, San Diego, Calif.
Application January 10, 1948, Serial No. 143,647
Term of patent 3½ years
(Cl. D85—2)

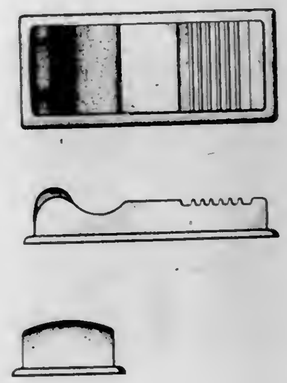


The ornamental design for a combined cigarette holder and dispenser, substantially as shown.

154,331
DESIGN FOR A BRAKE ADJUSTING TOOL
Wilbert F. Schnitger, Waukesha, and Earl C. Southall, Milwaukee, Wis.
Application December 11, 1946, Serial No. 135,405
Term of patent 3½ years
(Cl. D54—13)

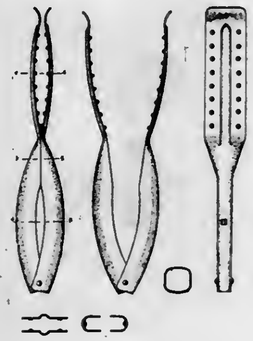
The ornamental design for a brake adjusting tool, substantially as shown.

154,332
DESIGN FOR A DOCUMENT COPYING APPARATUS
Alvin E. Schubert, Theodore G. Clement, and John F. Egan, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application June 26, 1948, Serial No. 147,236
Term of patent 14 years
(Cl. D64—11)



The ornamental design for a document copying apparatus, as shown.

154,333
DESIGN FOR A WRIST FLASHLIGHT OR SIMILAR ARTICLE
Sidney Schwartz, New York, N. Y., assignor to Bantam-Lite, Inc., New York, N. Y., a corporation of New York
Application February 12, 1949, Serial No. 820
Term of patent 14 years
(Cl. D48—25)

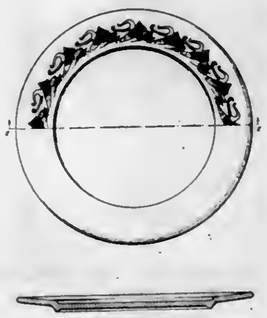


The ornamental design for a wrist flashlight or similar article, as shown.

154,334
DESIGN FOR A SILVERWARE POLISHING STAND
Amanda S. Seager, Glendale, Calif.
Application November 22, 1948, Serial No. 149,749
Term of patent 14 years
(Cl. D9—2)

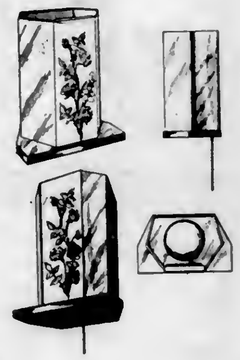
The ornamental design for a silverware polishing stand, as shown.

154,335
DESIGN FOR TONGS
Elwood K. Sechrist and Donald T. Offord, Detroit, Mich.
Application May 22, 1947, Serial No. 139,212
Term of patent 7 years
(Cl. D44—29)



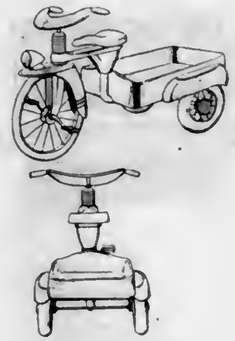
The ornamental design for tongs, as shown.

154,336
DESIGN FOR A WALL BRACKET
Harry P. Sharits, Denver, Colo.
Application June 9, 1947, Serial No. 139,535
Term of patent 3½ years
(Cl. D33—3)



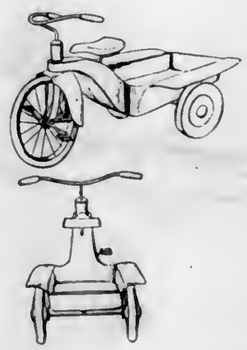
The ornamental design for a wall bracket, as shown.

154,337
DESIGN FOR A PLATE OR THE LIKE
Howard A. Silverman, Pittsburgh, Pa., assignor to Mayer China Company, Beaver Falls, Pa., a corporation of Pennsylvania
Application May 10, 1947, Serial No. 138,972
Term of patent 14 years
(Cl. D44—15)



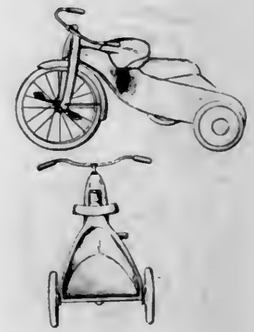
The ornamental design for a plate or the like, as shown and described.

154,338
DESIGN FOR A PIN-UP LAMP
Thomas J. Smith, Seattle, Wash.
Application September 27, 1948, Serial No. 148,794
Term of patent 3½ years
(Cl. D48—4)



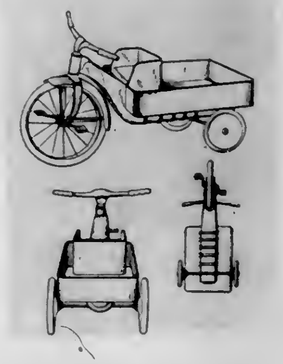
The ornamental design for a pin-up lamp, as shown.

154,339
DESIGN FOR A JUVENILE VEHICLE
William I. Smith, Perrysburg, Ohio, assignor to The Hettrick Manufacturing Company, Toledo, Ohio, a corporation of Ohio
Application August 12, 1948, Serial No. 148,071
Term of patent 14 years
(Cl. D34—15)



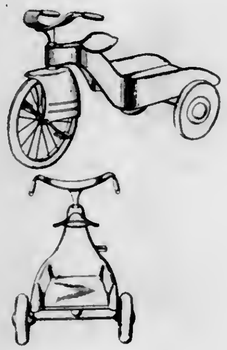
The ornamental design for a juvenile vehicle, as shown.

154,340
DESIGN FOR A JUVENILE VEHICLE
William I. Smith, Perrysburg, Ohio, assignor to The Hettrick Manufacturing Company, Toledo, Ohio, a corporation of Ohio
Application August 12, 1948, Serial No. 148,072
Term of patent 14 years
(Cl. D34—15)



The ornamental design for a juvenile vehicle, as shown.

154,341
DESIGN FOR A JUVENILE VEHICLE
William I. Smith, Perrysburg, Ohio, assignor to The Hettrick Manufacturing Company, Toledo, Ohio, a corporation of Ohio
Application August 12, 1948, Serial No. 148,074
Term of patent 14 years
(Cl. D34—15)



The ornamental design for a juvenile vehicle, as shown.

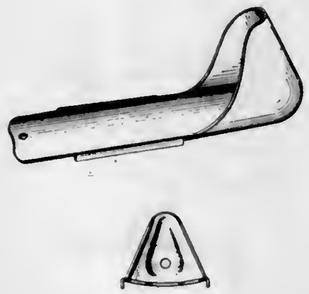
154,342
DESIGN FOR A JUVENILE VEHICLE
William I. Smith, Perrysburg, Ohio, assignor to The Hettrick Manufacturing Company, Toledo, Ohio, a corporation of Ohio
Application August 12, 1948, Serial No. 148,075
Term of patent 14 years
(Cl. D34—15)

The ornamental design for a juvenile vehicle, as shown.

154,343
DESIGN FOR A JUVENILE VEHICLE
William I. Smith, Perrysburg, Ohio, assignor to The Hettrick Manufacturing Company, Toledo, Ohio, a corporation of Ohio
Application August 12, 1948, Serial No. 148,076
Term of patent 14 years
(Cl. D34—15)

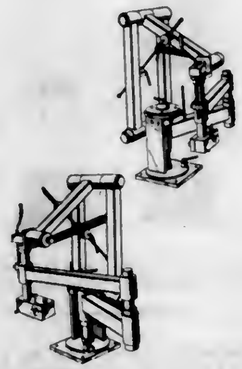
The ornamental design for a juvenile vehicle, as shown.

154,344
DESIGN FOR A TEXTILE FABRIC
David Stapler, Philadelphia, Pa.
Application April 17, 1948, Serial No. 145,785
Term of patent 3½ years
(Cl. D92—1)



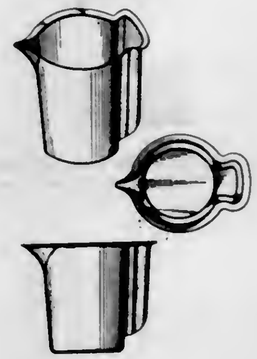
The ornamental design for a textile fabric, as shown.

154,345
DESIGN FOR A TYPEWRITER
Samuel A. Thompson, New York, N. Y., assignor to Simplex Typewriter Company, Inc., New York, N. Y.
Application October 1, 1947, Serial No. 141,699
Term of patent 7 years
(Cl. D64—11)



The ornamental design for a typewriter, as shown.

154,346
DESIGN FOR AN ENEMA TRAY
Virginia Campbell Thompson, Arlington County, Va.
Application August 27, 1947, Serial No. 141,085
Term of patent 7 years
(Cl. D83—1)

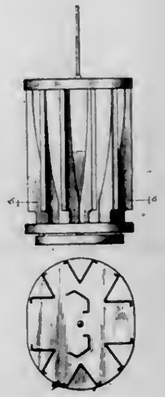


The ornamental design for an enema tray, as shown.

154,347
DESIGN FOR A RADIAL SAW SUPPORT
Mearl V. Tracy, Pasadena, Calif.
Application November 22, 1946, Serial No. 135,014
Term of patent 14 years
(Cl. D93—3)

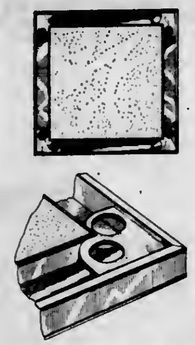
The ornamental design for a radial saw support, as shown.

154,348
DESIGN FOR A PITCHER
Earl S. Tupper, Upton, Mass.
Application October 5, 1946, Serial No. 133,775
Term of patent 14 years
(Cl. D44—21)

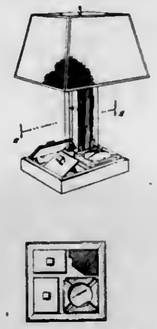


The ornamental design for a pitcher, as shown.

154,349
WITHDRAWN

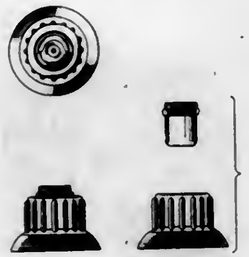


154,350
DESIGN FOR A DISPLAY STAND
Felix Van Cleef, Chicago, Ill., assignor to Johns-Manville Corporation, New York, N. Y.
Application March 15, 1948, Serial No. 145,092
Term of patent 14 years
(Cl. D80—9)



The ornamental design for a display stand, substantially as shown.

154,351
DESIGN FOR A GAME TABLE TOP
Michael M. Warner, Winnetka, Ill., assignor to Mason-Williams Company, Chicago, Ill., a corporation of Illinois
Application June 28, 1947, Serial No. 139,987
Term of patent 14 years
(Cl. D33—14)



The ornamental design for a game table top, as shown.

154,352
DESIGN FOR A TABLE LAMP
Siegbert Wetterhahn, New York, N. Y.
Application March 26, 1947, Serial No. 137,896
Term of patent 7 years
(Cl. D48—20)

The ornamental design for a table lamp, as shown.

154,353
DESIGN FOR A TOLL COIN OR TOKEN DEVICE FOR AUTOMOBILES
Abraham Zitenfield and Joe Weil, New York, N. Y.
Application June 10, 1947, Serial No. 139,566
Term of patent 7 years
(Cl. D52—4)

The ornamental design for a toll coin or token device for automobiles, substantially as shown.

154,354
DESIGN FOR A TOLL COIN OR TOKEN DEVICE FOR AUTOMOBILES
Abraham Zitenfield and Joe Weil, New York, N. Y.
Application June 12, 1947, Serial No. 139,628
Term of patent 3½ years
(Cl. D52—4)

The ornamental design for a toll coin or token device for automobiles, substantially as shown.

Soap, Liquid. Rochester Germicide Company. 370,229, Aug. 22, 1939. Republished June 28.
Soap, washing powder. Georg Schicht A. G. 264,331, Nov. 26, 1929. Republished June 28.
Soaps. P. P. Mulhens. 248,931, renewed Nov. 6, 1948. O. G. June 28.
Soaps. P. P. Mülhens. 249,739, renewed Nov. 20, 1948. O. G. June 28.
Tallow and grease for soap purposes. Consolidated Rendering Company. 257,361, June 4, 1929. Republished June 28.
Washing fluid. California Bleaching Water Co., Inc. 254,269, Mar. 19, 1929. Republished June 28.

CLASS 5

Cement, Heat conducting adhesive. United States Quarry Tile Company. 442,977, June 28; Serial No. 504,947, published Feb. 8, 1949.
Cement, Heat conducting adhesive. United States Quarry Tile Company. 442,978, June 28; Serial No. 504,949, published Feb. 8, 1949.
Cement, Synthetic adhesive. Beautykote Corporation. 442,979, Juno 28; Serial No. 507,096, published Jan. 4, 1949.
Cement, Synthetic adhesive. Tex Products, Inc. 442,980, June 28; Serial No. 507,155, published Jan. 11, 1949.
Glue. Cudahy Packing Co. 442,983, June 28; Serial No. 512,581, published May 11, 1948.
Glue. Pacific Bone Coal & Fertilizing Co. 287,061, Sept. 15, 1931. Republished June 28.
Tape, Heat sealing. Industrial Tape Corporation. 511,583, June 28; Serial No. 530,313, published Jan. 11, 1949.
Tapes, Friction, and rubber adhesive tapes. The Okonite Company. 511,584, June 28; Serial No. 530,332, published Mar. 1, 1949.

CLASS 6

Acne cream. Harven Products, Inc. 511,706, June 28; Serial No. 556,578, published Mar. 22, 1949.
Ammonia and benzol. Alabama By-Products Corporation. 163,004, Jan. 2, 1923. Republished June 28.
Analgesic and sedative. The Dr. Miles Medical Co. 54,274, June 26, 1906. Republished June 28.
Antifreeze mixture. The Thompson Specialties, Inc. 257,186–7, renewed May 28, 1949. O. G. June 28.
Antifreeze mixtures. The Thompson Specialties, Inc. 257,107, renewed May 28, 1949. O. G. June 28.
Antiseptic. Arwell Products Company. 290,826, Jan. 19, 1932. Republished June 28.
Antiseptic preparation. Johnson & Johnson. 208,222, Oct. 18, 1932. Republished June 28.
Antiseptic, Skin E. A. Henske. 271,248, May 27, 1930. Republished June 28.
Antiseptics and spermicides. E. R. Squibb & Sons. 334,936, May 19, 1936. Republished June 28.
Arsenic compound, Organic. The Hoffmann-La Roche Chemical Works. 261,283, renewed Sept. 17, 1949. O. G. June 28.
Bluing, Laundry, and laundry colors. B. Heller & Co. 98,148, July 7, 1914. Republished June 28.
Cardiotonic. The Hoffmann-La Roche Chemical Works. 261,282, renewed Sept. 17, 1949. O. G. June 28.
Chemical preparation. Shell Union Oil Corporation. 415,058, July 10, 1945. Republished June 28.
Chemical products. Firmenich & Co. 511,695, June 28; Serial No. 550,798, published Mar. 22, 1949.
Chemicals, Certain. Wishnick-Tumpeer, Inc. 348,372, July 27, 1937. Republished June 28.
Chlorinated solution. The Cudahy Packing Company. 511,705, June 28; Serial No. 558,354, published Mar. 22, 1949.
Cleanser and astringent, Skin, skin cleansing cream, hand cream. Turmac Specialties Company. 511,697, June 28; Serial No. 550,970, published Mar. 22, 1949.
Cleansing, deodorizing, and fumigating preparations. Arwell, Inc. 361,211, Oct. 11, 1938. Republished June 28.
Deodorant, Household, and moth preventative. Arwell Products Company. 239,245, Feb. 28, 1928. Republished June 28.
Disinfectant and antiseptic preparations. Rochester Germicide Company. 388,980, July 22, 1941. Republished June 28.
Dye. Park & Tilford. 511,724, June 28; Serial No. 518,250.
Dyes, dyestuffs, and colors. The Newport Company. 252,456, Feb. 5, 1929. Republished June 28.
Embalming fluid. The Embalmers' Supply Company, Inc. 262,011, renewed Sept. 24, 1949. O. G. June 28.
Extinguishing compound, Dry. Dugas Engineering Corporation. 395,946, June 16, 1942. Republished June 28.
Fire extinguishing compositions, Dry powdered chemical. Dugas Engineering Corporation. 409,942, Oct. 31, 1944. Republished June 28.
Flux, Brazing. O. M. Krembs. 254,799, renewed Apr. 2, 1949. O. G. June 28.
Fluxes, Tinning The Orasselli Chemical Company. 247,209, Sept. 25, 1928. Republished June 28.
Fumigant, Soil. Shell Chemical Corporation. 435,028, Dec. 9, 1947. Republished June 28.
Fungicides. Food Machinery Corporation. 511,712, June 28; Serial No. 561,664, published Mar. 22, 1949.
Gases, Compressed. National Cylinder Gas Company. 511,702, June 28; Serial No. 551,301, published Mar. 22, 1949.
Germicide and antiseptic solution. H. P. Chapman. 260,109, renewed Aug. 13, 1949. O. G. June 28.
Hand cream. Turmac Specialties Company. 511,698, June 28; Serial No. 550,971, published Mar. 22, 1949.
Hand cream, cold cream, cleansing cream, etc. Pacquin Inc. 322,981, Mar. 26, 1935. Republished June 28.
Hydrocarbons, alcohols, ketones, etc. Allied Chemical & Dye Corporation. 511,713, June 28; Serial No. 561,708, published Mar. 22, 1949.
Hygienic preparations. Valentine Laboratories, Inc. 357,215, May 24, 1938. Republished June 28.
Immunizing agent, Mosquito, intramuscular injection, etc. G. M. Broemmel. 430,111, Jan. 20, 1948. Republished June 28.
Insecticide. Shell Oil Company, Incorporated. 429,464, Apr. 29, 1947. Republished June 28.
Insecticides; fly spray; roach powder; etc. Palmer Company, Inc. 412,129, Feb. 20, 1945. Republished June 28.
Insecticides, moth fumigant. Arwell Products Co. 281,237, Mar. 10, 1931. Republished June 28.
Lavender water. P. E. Mulhens. 251,442, renewed Jan. 8, 1949. O. G. June 28.
Laxative medicines. Dr. Miles Medical Company. 211,498, Apr. 13, 1926. Republished June 28.
Liquid preparations. Super-X, Inc. 443,001, June 28; Serial No. 525,980, published Mar. 22, 1940.
Liquid to be added to refrigerants, such as methyl chloride, etc. Ansul Chemical Company. 372,931, Nov. 21, 1939. Republished June 28.
Medicinal preparation. Byk-Guldenwerke Chemische Fabrik Aktiengesellschaft. 253,993, renewed Mar. 12, 1949. O. G. June 28.
Medicinal preparation. H. Russell. 200,922, July 14, 1925. Republished June 28.
Medicinal preparation. W. R. Whitehead. 511,707, June 28; Serial No. 557,812, published Mar. 22, 1949.
Medicinal preparations. E. L. Spragin. 511,673, June 28; Serial No. 546,329, published Mar. 22, 1949.
Medicinal preparations. M. R. Thompson, Inc. 511,704, June 28; Serial No. 554,064, published Mar. 15, 1949.
Moth cakes and crystals, and deodorants. The Mabex Co. 440,118, Aug. 10, 1948. Republished June 28.
Mouth wash. Chicago Pharmacal Company. 357,021, May 24, 1938. Republished June 28.
Opium alkaloids and their salts; caffein, theobromin, etc. F. Hoffman-La Roche & Co. 75,372, re-renewed Sept. 28, 1949. G. G. June 28.
Perfume. J. W. Simonean. 511,725, June 28; Serial No. 521,691.
Perfumes and toilet water. Jean Patou, Inc. 511,714, June 28; Serial No. 562,709, published Mar. 22, 1949.
Pharmaceutical products. Spojené Farmaceutické Závody Národní Podnik. 511,692, June 28; Serial No. 549,676, published Mar. 22, 1949.
Poison, Rat and mice. H. W. Fay. 511,722, June 28; Serial No. 498,409.
Preparation for alleviating discomforts of excess stomach acidity. E. C. De Witt & Co. 45,473, Aug. 22, 1905. Republished June 28.
Preparation for alleviating mild rectal irritations. Pineule Medicine Co. 42,131, Feb. 23, 1904. Republished June 28.
Preparation for alleviating mild rectal irritations. Pineule Medicine Co. 45,170, Aug. 8, 1905. Republished June 28.
Preparation for use as a germicide, disinfectant, and household deodorant. Carsolite Corporation. 511,701, June 28; Serial No. 551,163, published Mar. 22, 1949.
Preparation for use in permanent hair waving. Samuel Bonat & Bros. 254,889, renewed Apr. 2, 1949. O. G. June 28.
Preparation to be used in the treatment of hypertension. E. Fougera & Co., Inc. 511,716, June 28; Serial No. 563,405, published Mar. 22, 1949.
Refrigerants and chemical fumigants. Ansul Chemical Company. 402,775, Aug. 10, 1943. Republished June 28.
Remedy to alleviate the pains of childbirth. Societe a Responsabilite Limitee Comar & Cie, Proprietaire des Laboratories Clin. 511,709, June 28; Serial No. 559,355, published Mar. 22, 1949.
Repellent, Fly. Consolidated Chemical Industries, Inc. 347,808, July 6, 1937. Republished June 28.
Rouge and lip stick. The Armand Company. 257,016, renewed May 28, 1949. O. G. June 28.
Sedative. Chicago Pharmacal Company. 395,675, June 2, 1942. Republished June 28.
Sedative and hypnotic. The Hoffman-La Roche Chemical Works. 261,586, renewed Sept. 17, 1949. O. G. June 28.
Sedatives. H. Berger. 406,058, Mar. 7, 1944. Republished June 28.
Shampoos and hair dyes. Tinte Oriental, Inc. 226,493, Apr. 12, 1927. Republished June 28.
Solution of coal tar, Alcoholic. Wright, Layman & Umney Limited. 511,648, June 28; Serial No. 541,248, published Mar. 22, 1949.

Tablets for pains. Professional Products Corporation. 302,070, Mar. 28, 1933. Republished June 28.
Tonic for preserving and beautifying the hair, Liquid. Lanman & Kemp, Inc. 261,617, renewed Sept. 17, 1949. O. G. June 28.
Tonics. Henry K. Wampole and Company, Incorporated. 511,734, June 28; Serial No. 549,996.
Vaginal creams and jellies, antiseptic preparations for feminine hygiene, etc. Ortho Pharmaceutical Corporation. 433,428, Oct. 14, 1947. Republished June 28.
Washing fluid. N. Quartararo. 254,849, renewed Apr. 2, 1949. O. G. June 28.

CLASS 8

Jewelry, silver tableware, silver toilet ware, etc. B. Altman & Co. 263,476, Nov. 5, 1929. Republished June 28.

CLASS 9

Powder, Blasting, pellet powder, dynamite, etc. Austin Powder Company. 308,311, Nov. 28, 1933. Republished June 28.

CLASS 10

Animal products. Consolidated Rendering Company 254,910, Apr. 2, 1929. Republished June 28.
Bone meal, Steamed, and ground steam bone. Pacific Bone Coal & Fertilizing Company. 308,542, Dec. 5, 1933. Republished June 28.
Fertilizer. Pacific Bone Coal & Fertilizing Co. 89,404, Dec. 17, 1912. Republished June 28.
Limestone, Pulverized. The Ohio Hydrate & Sopply Co. 261,123, renewed Sept. 3, 1949. O. G. June 28.

CLASS 11

Inks for writing, printing, and stamping, and thinners therefor. B. Heller & Co. 98,773, Aug. 14, 1914. Republished June 28.
Pads, Ink, rubber-stamp ink, and numbering machine ink. Office Specialties Co. 222,708, Jan. 4, 1927. Republished June 28.

CLASS 12

Blocks, Building, and supporting forms for concrete. P. G. Means. 511,680, June 28; Serial No. 548,753, published Mar. 1, 1949.
Building material. The Newport Rolling Mill Company. 120,619, Feb. 19, 1918. Republished June 28.
Cement, Portland. Pennsylvania-Dixie Cement Corporation. 256,872, renewed May 28, 1949. O. G. June 28.
Concrete forms and shaping devices. Metal Forms Corporation. 137,334, Nov. 23, 1920. Republished June 28.
Floor mastic. R. W. Storm. 309,311, Jan. 9, 1934. Republished June 28.
Flooring, Wooden. Geo. H. Storm & Co., Inc. 284,061, June 16, 1931. Republished June 28.
Framing members, Prefabricated lightweight reinforced concrete structural. Lith-I-Bar Company. 411,193, Jan. 9, 1945. Republished June 28.
Guards and parts thereof, Highway and road, etc. Republic Steel Corporation. 352,778, Dec. 14, 1937. Republished June 28.
Screens, Window. Ry-Lock Company, Ltd. 440,882, Oct. 5, 1948. Republished June 28.
Sidewall material, Wooden. The Perma Products Company. 440,117, Aug. 10, 1948. Republished June 28.
Stone, Building, asphaltic concrete, and so-called hot and cold mix asphaltic concrete, etc. Harry T. Campbell Sons Company. 306,728, Sept. 26, 1933. Republished June 28.
Stone for building or decoration, Polished. South Western Stone Co., Ltd. 296,816, Aug. 23, 1932. Republished June 28.

CLASS 13

Boilers, cooling and heating coils, expansion-valves, radiators, etc. American District Steam. Company. 111,115, July 4, 1916. Republished June 28.
Chains and chain links, Power. Link-Belt Company. 319,363, Nov. 20, 1934. Republished June 28.
Chains, Composite transmission and conveyer. Link-Belt Company. 222,800, Jan. 11, 1927. Republished June 28.
Cookers, Steam. The Toledo Cooker Company. 130,585. Apr. 27, 1920. Republished June 28.
Fencing, Wire field. Belknap Hardware & Manufacturing Company. 259,520, renewed July 30, 1949. O. G. June 28.
Hardware, Pole line. Hubbard and Company. 304,874, May 5, 1942. Republished June 28.
Jewelry, silver tableware, silver toilet ware, etc. B. Altman & Co. 263,476, Nov. 5, 1929. Republished June 28.
Pipe, Lap welded, butt welded, and electric welded, etc. Republic Steel Corporation. 352,376, Nov. 30, 1937. Republished June 28.
Tubing, plain and formed, Metal. Calumet and Hecla Consolidated Copper Company. 401,966, June 22, 1943. Republished June 28.
Valves. The Safety Cylinder Valve Company. 75,007, re-renewed Aug. 31, 1949. O. G. June 28.
Valves and steampacking. A. B. Jenkins. 32,911, re-renewed May 16, 1949. O. G. June 28.

CLASS 14

Alloys, Non-ferrous. United American Metals Corporation. 134,454, Aug. 31, 1920. Republished June 28.
Babbitt metal. Syracuse Smelting Works. 139,643, Feb. 8, 1921. Republished June 28.
Babbitt metal. United American Metals Corporation. 129,232, Jan. 27, 1920. Republished June 28.
Ingots, Bessemer, open hearth and electric furnace carbon, alloy, and stainless ferrous metal, etc. Republic Steel Corporation. 352,377, Nov. 30, 1937. Republished June 28.
Metal, Rust-resisting anti-corrosive. The Stark Rolling Mill Company. 107,210, Nov. 16, 1915. Republished June 28.
Metal, Rust-resisting anti-corrosive, and iron and steel bars, slabs, billets, etc. United Alloy Steel Corporation. 211,281, Apr. 6, 1926. Republished June 28.
Metal, Rust-resisting, anti-corrosive, and iron and steel bars, slabs, billets, etc. United Alloy Steel Corporation, 222,064, Dec. 21, 1926. Republished June 28.
Metals, Heat-treated ferrous. Link-Belt Company. 248,922, Nov. 6, 1928. Republished June 28.
Pig iron, in the form of pigs. Interlake Iron Corporation. 347,216, June 22, 1937. Republished June 28.
Steel, alloy steel, and iron and steel bars, and sheet bars. United Alloy Steel Corporation. 150,560, Sept. 26, 1922. Republished June 28.

CLASS 15

Gasoline. The Hickok Producing Co. 256,329, renewed May 14, 1949. O. G. June 28.
Gasoline, kerosene, and for lubricating purposes: oils, etc. American Oil Works Co. 259,754, renewed Aug. 6, 1949. O. G. June 28.
Grease for lubricating machinery. Sherwood Petroleum Company, Inc. 254,993–4, renewed Apr. 2, 1949. O. G. June 28.
Lubricants, Powdered. Panef Manufacturing Co. 415,056, July 10, 1945. Republished June 28.
Oils and greases, Lubricating. Pate Oil Company. 511,561, June 28; Serial No. 535,614, published Mar. 29, 1940.
Oils, Rust and corrosion preventive. Shell Oil Company, Incorporated. 413,827, May 15, 1945. Republished June 28.

CLASS 16

Paint, Anti-corrosive and anti-fouling, mixed paint, and enamel paints. Holzapfels Limited. 85,442, Feb. 20, 1912. Republished June 28.
Paint in liquid and paste form. Kling-Tite Paint Products Co. 511,729, June 28; Serial No. 539,717.
Paint in liquid form, Flat wall. Seidlits Paint & Varnish Co. 511,727, June 28; Serial No. 530,157.
Paint, Plastic. Great Lakes Varnish Works, Inc. 262,661, Oct. 22, 1929. Republished June 28.
Paints, Ready-mixed. Valentine & Company. 201,568–70, renewed Sept. 17, 1949. O. G. June 28.
Paints; varnishes; paint enamels, etc. W. W. Lawrence & Company. 511,624, June 28; Serial No. 538,768, published Mar. 15, 1949.
Polishes, Floor, woodwork, and furniture. The Gerson-Stewart Corporation. 295,062, June 14, 1932. Republished June 28.
Solvent, Lacquer. H. E. Stone. 258,025, July 9, 1929. Republished June 28.
Thinner, Lacquer, lacquer solvent, paint thinner, and paint solvent. Shell Chemical Company. 377,368, Apr. 30, 1940. Republished June 28.

CLASS 17

Cigars, cigarros and smoking tobacco. Yahn & McDonnell. 201,109, Sept. 3, 1929. Republished June 28.
Tobacco products. Peper Christian Tobacco Company. 258,595, renewed July 9, 1949. O. G. June 28.
Tobacco, Smoking. G. S. Mahn. 71,941, Dec. 22, 1908. Republished June 28.

CLASS 19

Automobile accessories, Fluid operated. Trico Products Corporation. 442,091, June 28; Serial No. 521,040, published Feb. 8, 1949.
Automobile bodies. General Motors Corporation. 511,601, June 28; Serial No. 535,026, published Mar. 22, 1949.
Automobiles. Hudson Motor Car Company. 511,679, June 28; Serial No. 547,123, published Mar. 22, 1949.
Automobiles. Humber Limited. 511551–2, June 28, Serial Nos. 516,844–5, published Mar. 22, 1940.
Automobiles and structural parts thereof. General Motors Corporation. 511,603, June 28; Serial No. 535,143, published Mar. 22, 1949.
Automobiles and structural parts thereof. General Motors Corporation. 511,688, June 28; Serial No. 548,062, published Mar. 22, 1949.
Automobiles, Passenger and commercial. Ford Motor Company. 365,565, Mar. 14, 1939. Republished June 28.
Axles, brakes, braking systems, etc. The Timken-Detroit Axle Company. 511,589, June 28; Serial No. 531,546, published Mar. 22, 1949.
Axles, Vehicle, and parts thereof. The Timken-Detroit Axle Company. 511,533, June 28; Serial No. 477,724, published Feb. 8, 1949.

Bicycles. D. P. Harris Hardware & Manufacturing Co., Inc. 442,992, June 28; Serial No. 521,882, published Feb. 8, 1949.
Bicycles. D. P. Harris Hardware & Manufacturing Co., Inc. 442,999, June 28; Serial No. 524,981, published Feb. 8, 1949.
Bicycles. D. P. Harris Hardware & Manufacturing Co., Inc. 443,000, June 28; Serial No. 524,985, published Feb. 8, 1949.
Bicycles. Edw. K. Tryon Company. 511,596, June 28; Serial No. 532,888, published Mar. 22, 1949.
Bicycles and structural parts thereof. The Huffman Manufacturing Company. 511,553, June 28; Serial No. 518,145, published Mar. 22, 1949.
Boats, Marine. G. Kalybaba. 442,974, June 28; Serial No. 486,306, published Feb. 8, 1949.
Boats, Power, and row boats. Harwill, Inc. 442,996, June 28; Serial No. 522,807, published Feb. 8, 1949.
Buses, vans, dairy vehicle bodies for automotive trucks. Hackney Bros. Body Co. 511,693, June 28; Serial No. 549,925, published Mar. 22, 1949.
Busses, Motor, and motor bus bodies. ACF-Brill Motors Company. 511,536, June 28; Serial No. 494,533, published Mar. 8, 1949.
Carriages, Baby. Carry-Cab Corporation. 511,645, June 28; Serial No. 541,087, published Feb. 8, 1949.
Carriages, Baby. Thayer, Inc. 511,690, June 28; Serial No. 548,882, published Mar. 22, 1949.
Cars, Motor. Ford Motor Company. 511,662, June 28; Serial No. 544,440, published Mar. 8, 1949.
Equipment for automotive trucks and busses, etc. Auto Truck Equipment Company. 511,651, June 28; Serial No. 542,505, published Feb. 8, 1949.
Equipment for automotive trucks and busses, etc. Auto Truck Equipment Company. 511,652, June 28; Serial No. 542,508, published Feb. 8, 1949.
Mounts, Shock absorber, and coil spring spacers. B. B. Fox. 511,703, June 28; Serial No. 551,789, published Mar. 22, 1949.
Propelling and steering mechanism for boats, Pedal or mechanically operated. E. F. Metcalfe. 511,644, June 28; Serial No. 541,062, published Mar. 22, 1949.
Radiators and radiator cores. McCord Corporation. 511,687, June 28; Serial No. 547,744, published Mar. 22, 1949.
Side walls surrounding the hubs of vehicular wheels, Protective, ornamental metal. Kromweel Manufacturing Co. 511,660, June 28; Serial No. 544,171, published Mar. 1, 1949.
Single trees, double trees, neck yokes, etc. Nizdorff-Krein Mfg. Co. 511,547, June 28; Serial No. 509,789, published Mar. 1, 1949.
Tanks, Fuel. Griffin Tank & Welding Service. 511,608, June 28; Serial No. 535,522, published Mar. 22, 1949.
Trailers, House. Kit Manufacturing Company. 511,682–3, June 28; Serial Nos. 547,559–60, published Mar. 22, 1949.
Trailers, House. Palace Corporation. 511,628, June 28; Serial No. 539,430, published Feb. 8, 1949.
Trailers, truck trailers, and parts therefor. Mustang Trailer Company. 442,982, June 28; Serial No. 511,953, published Sept. 2, 1947.
Trim for automobile wheels, Ornamental. Lyon, Incorporated. 511,677, June 28; Serial No. 546,715, published Feb. 8, 1949.
Trucks, Motor. Mack Manufacturing Corporation. 511,711, June 28; Serial No. 561,363, published Mar. 22, 1949.

CLASS 21

Apparatus for the control of electric energy. Allen-Bradley Company. 432,065, Aug. 19, 1947. Republished June 28.
Battery-charging apparatus, Complete and incomplete electrical control apparatus, electrical instruments, etc. Allen-Bradley Company. 185,662, June 24, 1924. Republished June 28.
Cables, Battery. The Creacent Company, Inc. 511,684–5, June 28; Serial Nos. 547,707–08, published Feb. 22, 1949.
Conductors, Electrical. General Electric Company. 259,138, renewed July 23, 1949. O. G. June 28.
Controls for electric switches, temperature-operated electric switches, pressive-operated electric switches, and parts thereof, Electric. The Federal Gauge Company. 276,768, Oct. 28, 1930. Republished June 28.
Drills, Electric portable, electric screw drivers, electric portable grinders, etc. Millers Falls Company. 255,562, renewed Apr. 23, 1949. O. G. June 28.
Electrical apparatus. Appleton Electric Company. 511,571, June 28; Serial No. 526,663, published Mar. 1, 1949.
Electrical apparatus. Ozonair Limited. 89,945. Jan. 21, 1913. Republished June 28.
Electrical apparatus. Leo Wise. 195,724, Mar. 3, 1925. Republished June 28.
Generators, electric motors, dynamotors, etc. Pioneer Gen-E-Motor Corporation. 411,608–09, Jan. 23, 1945. Republished June 28.
Lighting units, Vapor-tight. Benjamin Electric Manufacturing Company. 511,564, June 28; Serial No. 523,737, published Mar. 8, 1949.
Oscillators, Quartz crystal electric. General Electric Company. 403,020, Aug. 31, 1943. Republished June 28.
Radio receivers. Stewart-Warner Corporation. 442,984, June 28; Serial No. 518,221, published Apr. 20, 1948.
Radio receiving sets and radio phonograph combination sets. The Magnavox Company. 511,593, June 28; Serial No. 532,145, published Jan. 18, 1949.
Switch boards, flat switches, flush switches, etc., Electrical. J. A. Crabtree & Co. Limited. 156,632, July 11, 1922. Republished June 28.
Terminals and contacts; trolley shoes; switches, switch contacts, etc., Electric. Ampco Metal, Inc. 442,973, June 28; Serial No. 479,323, published Aug. 6, 1946.

CLASS 22

Board adapted for use in exercise of the human body, Supporting. May MacGregor. 439,437, June 20, 1948. Republished June 28.
Dice, Playing. Joe Treybal. 261,936, renewed Sept. 24, 1949. O. G. June 28.
Games, Board. Selchow & Righter Company. 343,782, Mar. 2, 1937. Republished June 28.

CLASS 23

Accessories, Power shaft. Standard Pressed Steel Co. 511,640, June 28; Serial No. 540,730, published Mar. 15, 1949.
Agricultural machines and parts thereof. Bertrand R. Glaenzer. 511,537, June 28; Serial No. 495,230, published Mar. 15, 1949.
Air cleaners and dust separators in association with internal combustion engines. The United Specialties Company. 403,821, Oct. 19, 1943. Republished June 28.
Attachments for trucks, Mechanical loading. Shoveller Corporation. 511,577, June 28; Serial No. 528,957, published Mar. 15, 1949.
Attachments for trucks, Mechanical loading. Shoveller Corporation. 511,579, June 28; Serial No. 529,534, published Mar. 15, 1949.
Bases for compression and injection molds, Mold. Master Machine & Tool Company. 511,595, June 28; Serial No. 532,741, published Mar. 15, 1949.
Blades, Razor. Fred Harvey. 511,611, June 28; Serial No. 536,382, published Mar. 5, 1949.
Blades, Razor. Otto Ruth, Inc. 255,083, renewed Apr. 16, 1949. O. G. June 28.
Blades, Razor, razors, shears, etc. Edward L. Cowen. 255,541, renewed Apr. 23, 1949. O. G. June 28.
Cleaning machine, Metal parts. Park Chemical Company. 435,455, Dec. 30, 1947. Republished June 28.
Clutches. The Carlyle Johnson Machine Company. 378,284, June 4, 1940. Republished June 28.
Conveyers for conveying and handling material. Guarantee Construction Company. 137,700, Dec. 7, 1920. Republished June 28.
Couplings, Shaft, shaft bearings of the clamp box or pillow block type, etc. Standard Pressed Steel Co. 511,642, June 28; Serial No. 540,733, published Mar. 15, 1949.
Cutting machines, Pinion and gear, bench lathes, milling machines and attachments, etc. E. L. Sanderson. 511,629, June 28; Serial No. 539,442, published Mar. 15, 1949.
Degreasers. Circo Products Company. 439,383, June 22, 1948. Republished June 28.
Equipment for use in the graphic arts industry. American Type Founders Sales Corporation. 511,534, June 28; Serial No. 483,503, published Mar. 15, 1949.
Equipment, Shop, packing plant equipment. Standard Press Steel Co. 511,641, June 28; Serial No. 540,731, published Mar. 15, 1949.
Guns, Grease, or grease dispensers. National Sales, Inc. 511,643, June 28; Serial No. 541,018, published Mar. 15, 1949.
Jacks, Hydraulic, hydraulic automobile fender straightenera, hand operated bench tool grinders and vises. American Hydraulics, Inc. 443,004, June 28; Serial No. 493,520.
Jacks, Lifting, and attachments for jacks. The Duff-Norton Manufacturing Company. 260,551, renewed Aug. 27, 1949. O. G. June 28.
Jewelry, silver tableware, silver toilet ware, etc. B. Altman & Co. 263,476, Nov. 5, 1929. Republished June 28.
Jig saw for therapeutic purposes, Pedal-operated. R. O. Steiner. 511,538, June 29; Serial No. 495,845, published Mar. 15, 1949.
Machinery and equipment, Earth moving. Wooldridge Manufacturing Company. 511,540, June 28; Serial No. 496,003, published Mar. 15, 1949.
Machinery and parts thereof, Box making. United States Automatic Box Machinery Co., Inc. 511,647, June 28; Serial No. 541,356, published Mar. 15, 1949.
Machinery, Bag filling and sealing. Capem Machinery Corporation. 261,624, renewed Sept. 17, 1949. O. G. June 28.
Machinery. Woodworking, nonferrous metal work machinery. Onsrud Machine Works, Inc. 511,649, June 28; Serial No. 541,882, published Mar. 15, 1949.
Marking devices and accessories therefor. A. C. Gibson Co. Inc. 511,625, June 28; Serial No. 539,044, published Mar. 15, 1949.
Materials-handling equipment, accessories thereto and parts therefor. Lewis-Shepard Products, Inc. 439,737, July 20, 1948. Republished June 28.

Motors for rowboats, canoes, and the like; oil engines, centrifugal and high pressure reciprocating pumps, etc. Evinrude Motor Company. 254,253, renewed Mar. 12, 1949. O. G. June 28.
Motors, Outboard. National Pressure Cooker Company. 511,541, June 28; Serial No. 502,223, published Mar. 15, 1949.
Needles, latch. Arrow Needle Company. 511,635, June 28; Serial No. 540,241, published Mar. 15, 1949.
Plungers, Oil well pump. Gustin-Bacon Manufacturing Company. 431,227, July 15, 1947. Republished June 28.
Sawing machines, Power driven wood. W. B. Mershon Corp. 511,671, June 28; Serial No. 545,146, published Mar. 15, 1949.
Saws, wood-saw blades, axes, etc. Bliss, Mize & Silliman Hardware Co. 156,186, June 20, 1922. Republished June 28.
Scrapers, Dull edged thin blade meat. Struble Products. 511,597, June 28; Serial No. 533,773, published Mar. 15, 1949.
Screens, parts and accessories, Sewage and water, etc. Link-Belt Company. 286,793, Sept. 1, 1931. Republished June 28.
Shears and scissors, Household and factory. Gabe Manufacturing Corporation. 511,627, June 28; Serial No. 539,406, published Mar. 15, 1949.
Slings, Cane. American Hoist & Derrick Co. 511,631, June 28; Serial No. 539,927, published Mar. 15, 1949.
Snaths, Scythe. Sta-Tite Snath Co. 259,185, renewed July 23, 1949. O. G. June 28.
Stapling machines, Hand-operated. A. L. Hansen Mfg. Co. 511,630, June 28; Serial No. 539,872, published Mar. 15, 1949.
Sweepers, Carpet. Bissell Carpet Sweeper Co. 73,421, re-renewed Apr. 20, 1949. O. G. June 28.
Tool made of base metal, Bottle cap removing and replacing. Swallow Airplane Company, Inc. 511,721, June 28; Serial No. 498,036.
Tractor, Narrow-gauge. Western Gear Works. 511,502, June 28; Serial No. 528,438, published Mar. 15, 1949.
Vending machines, Coin operated. The Northwestern Corporation. 511,653, June 28; Serial No. 542,634, published Mar. 15, 1949.

CLASS 24

Washtubs and wash boilers. The Atlantic Stamping Company. 152,674, Mar. 7, 1922. Republished June 28.

CLASS 25

Locks. Master Lock Company. 280,311, July 19, 1927. Republished June 28.
Padlocks, hasp locks, and door guards and door bolts. Master Lock Company. 218,153, Sept. 21, 1926. Republished June 28.

CLASS 26

Apparatus for detecting the angular lurue of static and dynamic unbalance of wheels, Electrical. Stewart-Warner Corporation. 442,990, June 28; Serial No. 519,839, published Mar. 15, 1949.
Attachment to the neck of a spirits bottle for use in dispensing liquors in a known quantity. Modern Engineering and Development Co. 442,976, June 28; Serial No. 499,795, published Mar. 15, 1949.
Benches, Optical, optical kits, prism assemblies, etc. C. W. North. 442,989, June 28; Serial No. 518,620, published Mar. 15, 1949.
Calculating and adding machines. Monroe Calculating Machine Company. 129,029, Jan. 20, 1920. Republished June 28.
Films, Silent and/or sound motion picture. United World Films, Inc. 511,659, June 28; Serial No. 543,866, published Mar. 15, 1949.
Gages of plastic material. Perfect Circle Corporation. 511,569, June 28; Serial No. 524,619, published Mar. 15, 1949.
Glasses, Sun. Bo Vier Consultants. 511,733, June 28; Serial No. 546,819.
Instrument, Electronically operated. Wheelco Instruments Company. 511,575, June 28; Serial No. 528,104, published Mar. 15, 1949.
Instruments, Electronically operated, and parts and accessories therefor. Wheelco Instruments Company. 511,576, June 28; Serial No. 528,158, published Mar. 15, 1949.
Instruments, Oil well surveying, orienting instruments. Eastman Oil Well Survey Company. 511,546, June 28; Serial No. 507,075, published Mar. 15, 1949.
Meters, Watthour, demand meters, combined watthour and demand meters, and registers and transformers. Duncan Electric Manufacturing Company. 511,691, June 28; Serial No. 549,238, published Mar. 15, 1949.
Radar and computer apparatus. Reeves Instrument Corporation. 442,995, June 28; Serial No. 522,804, published Mar. 15, 1949.
Regulating systems, Temperature. Minneapolis-Honeywell Regulator Company. 511,574, June 28; Serial No. 527,864, published Mar. 15, 1949.
Slide-charts. Printed, for calculation and correlation of technical data and printed indicia. Perrygraf Corporation. 511,559, June 28; Serial No. 521,752, published Mar. 15, 1949.

CLASS 27

Clocks. Chelsea Clock Company. 511,623, June 28; Serial No. 538,494, published Mar. 22, 1949.
Clocks. The Lux Clock Manufacturing Company. 511,557, June 28; Serial No. 521,198, published Mar. 22, 1949.
Clocks, and parts of clocks. The Lux Clock Manufacturing Company. 436,082–3, Jan. 20, 1948. Republished June 28.
Clocks and watches. Bulova Watch Company, Inc. 511,664, June 28; Serial No. 544,541, published Mar. 22, 1949.
Dial numerals and watch hands. Du Bern Company, Inc. 442,988, June 28; Serial No. 517,977, published Mar. 22, 1949.
Watch movements, and for watch parts. B. Jadow, Inc. 511,590, June 28; Serial No. 531,915, published Mar. 22, 1949.
Watches. Bulova Watch Company, Inc. 511,616, June 28; Serial No. 537,138, published Mar. 22, 1949.
Watches. Bulova Watch Company, Inc. 511,663, June 28; Serial No. 544,539, published Mar. 22, 1949.
Watches. E. Leichter. 511,656, June 28; Serial No. 542,956, published Mar. 22, 1949.
Watches and parts thereof. G. N. Wallace. 409,177, Sept. 19, 1944. Republished June 28.
Watches and watchcases. Bulova Watch Company, Inc. 511,665, June 28; Serial No. 544,543, published Mar. 22, 1949.
Watches, watch movements, watch cases, and clocks. Kerco Jewellery Limited. 511,686, June 28; Serial No. 547,735, published Mar. 22, 1949.

CLASS 28

Chains, Watch. Hickok Manufacturing Co. Inc. 511,681, June 28; Serial No. 547,545, published Mar. 22, 1949.
Compacts and cigarette cases, Gold plated and silver plated. J. V. Pfleger Mfg. Company. 511,592, June 28; Serial No. 532,056, published Mar. 22, 1949.
Flatware, hollow-ware, and jewelry, Silver plated. St. Louis Metalcrafts Inc. 511,573, June 28; Serial No. 527,180, published Mar. 22, 1949.
Flatware, hollow-ware, and jewelry, Sterling silver. St. Louis Metalcrafts Inc. 511,572, June 28; Serial No. 527,118, published Mar. 22, 1949.
Flatware, Sterling silver. The Elmore Silver Co., Inc. 511,563, June 28; Serial No. 523,658, published Mar. 22, 1949.
Flatware, Sterling silver. The Elmore Silver Co., Inc. 511,566, June 28; Serial No. 524,123, published Mar. 22, 1949.
Flatware, Sterling silver. The Elmore Silver Co., Inc. 511,567, June 28; Serial No. 524,389, published Mar. 22, 1949.
Hollow-ware and flatware. Glastonbury, Inc. 511,604, June 28; Serial No. 535,146, published Mar. 22, 1949.
Jewelry. Walter E. Hayward Co., Inc. 511,599, June 28; Serial No. 534,439, published Mar. 22, 1949.
Jewelry. Mazer Bros. Inc. 511,578, June 28; Serial No. 529,182, published Mar. 22, 1949.
Jewelry. Ostby and Barton Company. 511,605, June 28; Serial No. 535,176, published Mar. 22, 1949.
Jewelry. Swank, Inc. 511,654, June 28; Serial No. 542,681, published Mar. 22, 1949.
Jewelry, silver tableware, silver toilet ware, etc. B. Altman & Co. 263,476, Nov. 5, 1929. Republished June 28.
Rings, Finger. F. Goldman. 511,694, June 28; Serial No. 550,039, published Mar. 22, 1949.
Rings, Finger. Granat Bros., Inc. 511,656, June 28; Serial No. 542,917, published Mar. 22, 1949.
Rings, Finger. Granat Bros., Inc. 511,657, June 28; Serial No. 542,920, published Mar. 22, 1949.
Rings, Finger, diamond rings, wedding rings, etc. A. G. Rider. 511,544, June 28; Serial No. 506,896, published Mar. 22, 1949.
Rings, Wedding, jewelry settings and findings. The Precious Metals Specialties Company, Inc. 511,648, June 28; Serial No. 541,699, published Mar. 22, 1949.

CLASS 29

Brooms. Indianapolis Brush & Broom Mfg. Co. 168,091, Jan. 2, 1923. Republished June 28.
Brush, Denture. S. M. Edison. 233,620, Oct. 4, 1927. Republished June 28.
Brushes, Floor, wall brushes, yarn sweepers, etc. Palmer Company, Inc. 413,940, May 22, 1945. Republished June 28.
Tooth-brushes. A. Drabkin. 415,185, July 31, 1945. Republished June 28.

CLASS 31

Cabinets, Frozen food. The Pure Oil Company. 511,543, June 28; Serial No. 503,388, published Oct. 12, 1948.
Condensing units, coil-pan combinations, replacement and repair parts, etc. Melchior, Armstrong, Dessau Co. of Delaware, Inc. 511,568, June 28; Serial No. 524,549, published Mar. 22, 1949.
Drawers adapted for use in refrigerators, Storage. The Coolerator Company. 511,705, June 28; Serial No. 555,343, published Mar. 22, 1949.
Filters, Radiator, Inc. 511,661, June 28; Serial No. 544,246, published Mar. 22, 1949.

Filters, Air, and dust arrestors. Northern Blower Company. 511,591, June 28; Serial No. 531,934, published Mar. 15, 1949.
Filters, Oil, oil filter cartridges, oil bath air cleaners, etc. Ford Motor Company. 511,718, June 28; Serial No. 569,143, published Mar. 22, 1949.
Freezers, Electric ice cream. Chicago Electric Manufacturing Company. 511,613, June 28; Serial No. 536,666, published Mar. 15, 1949.
Refrigerators, Household electric; water coolers; electrically-operated oil filters, etc. Oakes & Company. 511,637, June 28; Serial No. 540,560, published Mar. 22, 1949.
Resins, Complex synthetic. Monsanto Chemical Company. 511,581, June 28; Serial No. 530,014, published Mar. 15, 1949.
Straining and filtering apparatus, Mechanical fluid. Diesel Filter Co. 442,972, June 28; Serial No. 466,608, published Mar. 15, 1949.
Water-demineralizers, Cartridge filter type. A. E. Tomkin. 511,036, June 28; Serial No. 540,342, published Mar. 22, 1949.
Water softening materials. Culligan Zeolite Company. 439,454, June 29, 1948. Republished June 28.

CLASS 32

Mattresses, box springs, and coil springs. Englander Spring Bed Co. 301,220, Feb. 21, 1933. Republished June 28.
Mattresses, box springs, pillows, studio couches, etc. Sleepmaster Products Company, Inc. 433,865, Nov. 4, 1947. Republished June 28.
Mattresses, pillows. Shreveport Mattress Company. 254,422, renewed Mar. 26, 1949. O. G. June 28.
Padding material, Upholstery, and mattress filling. Gustin-Bacon Manufacturing Company. 438,737, May 11, 1948. Republished June 28.

CLASS 34

Boilers, cooling and heating coils, expansion-valves, radiators, etc. American District Steam Company. 111,115, July 4, 1916. Republished June 28.
Boilers, House-heating, burning solid, liquid, or gaseous fuel. United States Radiator Corporation. 254,975, renewed Apr. 2, 1949. O. G. June 28.
Burners, Oil. Fluid Heat Division, Anchor Post Products, Inc. 511,610, June 28; Serial No. 535,839, published Mar. 8, 1949.
Burners, Oil. G. Strysko. 443,003, June 28; Serial No. 526,309, published Mar. 8, 1949.
Burners, Oil, and space heaters. U. S. Machine Corporation. 511,609, June 28; Serial No. 535,635, published Feb. 22, 1949.
Fans, Exhaust ventilating. The Eagle-Picher Company. 511,717, June 28; Serial No. 568,047, published Mar. 22, 1949.
Furnaces, Floor. Mahl Mfg. Co. 511,615, June 28; Serial No. 536,938, published Feb. 22, 1949.
Furnaces, Gas, oil, or coal, hot-air. Carrier-Lyle Corporation. 261,359, renewed Sept. 17, 1949. O. G. June 28.
Furnaces, Oil, gas, and coal fired warm air. Thatcher Furnace Company. 511,602, June 28; Serial No. 535,008, published Feb. 15, 1949.
Heat exchangers, Indirect water heaters, expansion tanks, etc. Bell & Gossett Company. 511,535, June 28; Serial No. 493,910, published Mar. 8, 1949.
Heaters, Water. Southern Heater Corporation. 511,594, June 28; Serial No. 532,351, published Mar. 8, 1949.
Heating equipment. Steel Products Engineering Company. 511,680, June 28; Serial No. 547,493, published Mar. 1, 1949.
Heating equipment or apparatus, Gas. Institute of Gas Heating Industries. 511,719, June 28; Serial No. 547,992, published Nov. 30, 1948.
Ranges and stoves, Gas. The Tappan Stove Company. 511,696, June 28; Serial No. 550,847, published Mar. 22, 1949.
Repair kit in the form of a card or a holder containing repair parts for a lighter for gas burners. Specialty Manufacturing Company. 511,600, June 28; Serial No. 534,561, published Jan. 18, 1949.
Return systems, Electrically powered boiler feed water and condensate, and industrial exhaust systems, etc. Detrex Corporation. 511,678, June 28; Serial No. 546,972, published Mar. 8, 1949.
Sheets of colored transparent and translucent heat and moistureproof plastic film, Thin. Transolene Corporation. 442,998, June 28; Serial No. 523,628, published Feb. 15, 1949.

Reed, James H., Detroit, Mich. Child's teeter. 154,323, June 28.

Reid, Patricia, Chicago, Ill. Toe nail polishing device. 154,324, June 28.

Roberts, Henry T., assignor to United States Vending Corporation, Chicago, Ill. Dispensing machine. 154,325, June 28.

Roebling's, John A., Sons Company, assignee: *See*—
Ensign, Robert H.

Roysher, Hudson B., Los Angeles, Calif. Nonrolling torque tool handle. 154,326, June 28.

Russell, Alfred R., St. Clair Shores, Mich. Automobile hood ornament. 154,327, June 28.

Ryan, John E., Danbury, Conn. Tile floor and wall covering. 154,328, June 28.

Schiff, Ann R., Columbus, Ohio. Combined handbag and spectacle holder. 154,329, June 28.

Schipper, Maurice J., San Diego, Calif. Combined cigarette holder and dispenser. 154,330, June 28.

Schnitger, Wilbert F., Waukesha, and E. C. Southall, Milwaukee, Wis. Brake adjusting tool. 154,331, June 28.

Schubert, Alvin E., T. G. Clement, and J. F. Egan, assignors to Eastman Kodak Company, Rochester, N. Y. Document copying apparatus. 154,332, June 28.

Schwartz, Sidney, assignor to Bantam-Lite, Inc., New York, N. Y. Wrist flashlight or similar article. 154,333, June 28.

Seager, Amanda S., Glendale, Calif. Silverware polishing stand. 154,334, June 28.

Sechrist, Elwood K., and D. T. Offord, Detroit, Mich. Tongs. 154,335, June 28.

Select Jewelry Mfg. Co. Inc., assignee: *See*—
Markoe, Jacob.

Sharits, Harry P., Denver, Colo. Wall bracket. 154,336, June 28.

Silverman, Howard A., Pittsburgh, assignor to Mayer China Company, Beaver Falls, Pa. Plate or the like. 154,337, June 28.

Simplex Typewriter Company, Inc., assignee: *See*—
Thompson, Samuel A.

Smith, Richard V.: *See*—
Kauffman, Jack, and Smith.

Smith, Thomas J., Seattle, Wash. Pin-up lamp. 154,338, June 28.

Smith, William I., Perrysburg, assignor to The Hettrick Manufacturing Company, Toledo, Ohio. Juvenile vehicle. 154,339, June 28.

Smith, William I., Perrysburg, assignor to The Hettrick Manufacturing Company, Toledo, Ohio. Juvenile vehicle. 154,340, June 28.

Smith, William I., Perrysburg, assignor to The Hettrick Manufacturing Company, Toledo, Ohio. Juvenile vehicle. 154,341, June 28.

Smith, William I., Perrysburg, assignor to The Hettrick Manufacturing Company, Toledo, Ohio. Juvenile vehicle. 154,342, June 28.

Smith, William I., Perrysburg, assignor to The Hettrick Manufacturing Company, Toledo, Ohio. Juvenile vehicle. 154,343, June 28.

Southall, Earl C.: *See*—
Schnitger, Wilbert F., and Southall.

Stapler, David, Philadelphia, Pa. Textile fabric. 154,344, June 28.

Thompson, Samuel A., assignor to Simplex Typewriter Company, Inc., New York, N. Y. Typewriter. 154,345, June 28.

Thompson, Virginia C., Arlington County, Va. Enema tray. 154,346, June 28.

Tracy, Mearl V., Pasadena, Calif. Radial saw support. 154,347, June 28.

Treiman, Morris: *See*—
Crane, Walton B., and Treiman.

Trifari, Krussman & Fishel, Inc., assignee: *See*—
Philippe, Alfred.

Tupper, Earl S., Upton, Mass. Pitcher. 154,348, June 28.

United States Rubber Company, assignee: *See*—
Arbib, Richard H.

United States Vending Corporation: *See*—
Roberts, Henry T.

Van Cleef, Feliz, Chicago, Ill., assignor to Johns-Manville Corporation, New York, N. Y. Display stand. 154,350, June 28.

Wager, Stanley: *See*—
Brook, Franklin, and Wager.

Warner, Michael M., Winnetka, assignor to Mason-Williams Company, Chicago, Ill. Game table top. 154,351, June 28.

Weber, Harold H.: *See*—
Mock, Thomas M., and Weber.

Weil, Joe: *See*—
Zitenfield, Abraham, and Weil.

West Disinfecting Company, assignee: *See*—
Gilmore, Burdette B.

Wetterhahn, Siegbert, New York, N. Y. Table lamp. 154,352, June 28.

Wheeling Steel Corporation, assignee: *See*—
Ackermann, William E.

Zitenfield, Abraham, and J. Weil, New York, N. Y. Toll coin or token device for automobiles. 154,353, June 28.

Zitenfield, Abraham, and J. Weil, New York, N. Y. Toll coin or token device for automobiles. 154,354, June 28.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 28TH DAY OF JUNE, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abbiati, Furio A.: *See*—
Healy, John J., Jr., Taylor, and Abbiati.

Abbott, Edward J., assignor to Abbott Machine Company, Wilton, N. H. Bobbin holder for spinning and twisting frames. 2,474,210, June 28.

Abbott, Furman S., Montclair, N. J., assignor to Airkem, Inc., New York, N. Y. Vaporizer. 2,474,563, June 28.

Abbott Machine Company, assignee: *See*—
Abbott, Edward J.

Aff, Albert E., South San Francisco, Calif. Hot dog machine. 2,474,390, June 28.

Agriculture, United States of America as represented by the Secretary of, assignee: *See*—
Ramage, William D.
Ward, Wilfred H., and Binkley.

Air Control Products, Inc., assignee: *See*—
Babcock, Kenneth L.

Airdesign, Incorporated, assignee: *See*—
Pamphilon, Leon E.

Airkem, Inc., assignee: *See*—
Abbott, Furman S.
Nicolet, Constant E.
Wheeler, William H., and Wamnes.

Air Reduction Company, Incorporated, assignee: *See*—
Slottman, George V.

Aitcheson, Thomas G., Kenmore, and A. A. Gradisar, Buffalo, N. Y., assignors to American Optical Company, Southbridge, Mass. Pivotal mounting means for microscope arms and the like. 2,474,644, June 28.

Ajax Engineering Corporation, assignee: *See*—
Tama, Mario, and Hoff.

Allen, Bernard: *See*—
Lopez, Rufino, and Allen.

Allen, Harold F., De Witt, assignor to S. F. Hancock, Syracuse, N. Y. Jiggering machine for forming articles of plastic clay. 2,474,509, June 28.

Allied Appliance Co.: *See*—
Lovick, John B.

Allis-Chalmers Manufacturing Company, assignee: *See*—
Ray, James L.

American Cyanamid Company, assignee: *See*—
Bean, James J.
Dixon, James K.
Hardy, William B., and E. M.

American Optical Company, assignee: *See*—
Aitcheson, Thomas G., and Gradisar.

American Phenolic Corporation, assignee: *See*—
Kearse, George P.

American Steel Foundries, assignee: *See*—
Flesch, Norman.

American Steel Package Company, The, assignee: *See*—
Behringer, Grover F.

American Telephone and Telegraph Company, assignee: *See*—
Dorr, Gilbert G.

American Viscose Corporation, assignee: *See*—
Coleman, Melvin B., and Bennington.
Shearer, Howard E., and Van Nest.

Amsler, Robert, assignor to Landis & Gyr, A.-G., Zug, Switzerland. Heat regulating apparatus. 2,474,798, June 28.

Amstutz, James B., Oak Park, and O. E. Fieroh, assignors to Crane Co., Chicago, Ill. Air operated chuck. 2,474,771, June 28.

Amyot, Adelard, Montreal, Quebec, Canada. Refrigerator. 2,474,452, June 28.

Anderson, Frank R., South Hampton, N. H., assignor to The Bailey Company, Inc., Amesbury, Mass. Weather strip. 2,474,409, June 28.

Aparicio, Luis R., Madrid, Spain. Variable filter screen. 2,474,712, June 28.

Applegate, Earl, Frankfort, Ind. Take-up of electric cords. 2,474,566, June 28.

Applegate, Lindsay M., Portland, Oreg. Vacuum apparatus for impregnating floors. 2,474,567, June 28.

Armco Steel Corporation, assignee: *See*—
Vaughn, Bernard G., and Fell.

Armitage, James A., Houston, Tex. Hydraulic fishing tool. 2,474,453, June 28.

Armour and Company, assignee: *See*—
Atkisson, Minton S., and Schneider.

Arthur, James L., Indianapolis, Ind., assignor to General Motors Corporation, Detroit, Mich. Ignition system. 2,474,510, June 28.

Ashton, Benjamin N., assignor to Electrol Incorporated, Kingston, N. Y. Unloading valve. 2,474,772, June 28.

Atkisson, Minton S., Wilmette, and A. E. Schneider, Itasca, assignors to Armour and Company, Chicago, Ill. Intestine splitting machine. 2,474,299, June 28.

Atlantic Refining Company, The, assignee: *See*—
Hersberger, Arthur B.
Hersberger, Arthur B., and Helligmann.

Attorney General of the United States, Vested in the: *See*—
Muller, Jacques.

Auble, Arthur J., Ord, Nebr. Marquise or canopy for buildings. 2,474,713, June 28.

Aue, Georg, assignor to Sulzer Freres, Societe Anonyme, Winterthur, Switzerland. Multistage compressor. 2,474,410, June 28.

Autographic Register Company, assignee: *See*—
Borchers, William G.

Autoyre Company, Incorporated, The, assignee: *See*—
Kurti, Alexander.

Avco Manufacturing Corporation, assignee: *See*—
Vutz, Wilhelm.

Averna, Frank, Ridgewood, N. Y. Cigarette locking hinge for cigarette cases. 2,474,714, June 28.

Avery, Ralph L., Oakland, Calif. Electrical plug. 2,474,454, June 28.

Babcock, Kenneth L., Muskegon, assignor to Air Control Products, Inc., Coopersville, Mich. Air duct control. 2,474,455, June 28.

Babson, Robert D., assignor to Merck & Co., Inc., Rahway, N. J. Preparing substituted propionic acids. 2,474,715, June 28.

Back, Raymond R., London, England, assignor to International Standard Electric Corporation, New York, N. Y. Electron discharge device. 2,474,211, June 28.

Bacon, Thomas P.: *See*—
Daum, John L., McCloud, and Bacon.
McCloud, Robert B., Daum, and Bacon.

Bacon, Thomas P., Jr., Oakland, Calif. Device for applying new tread material to tires. 2,474,511, June 28.

Bailey Company, Inc., The, assignee: *See*—
Anderson, Frank R.

Baker, William R., Berkeley, Calif., assignor to the United States of America as represented by the United States Atomic Energy Commission. Radiation detector. 2,474,773, June 28.

Baldwin Locomotive Works, The, assignee: *See*—
Hyde, Lawrence K.

Band, Harald H., Kew Gardens, N. Y. Ball point fountain pen. 2,474,300, June 28.

Bannon, Lewis A., Baton Rouge, La., assignor to Standard Oil Development Company. Dilution and hydrolysis of diethyl sulfate solutions. 2,474,566, June 28.

Bannon, Lewis A., Baton Rouge, La., and C. E. Morrell, Westfield, N. J., assignors to Standard Oil Development Company. Dilution and hydrolysis of diethyl sulfate solutions. 2,474,568, June 28.

Barnett, J. H., Son and Company Limited, assignee: *See*—
Barnett, Joseph H.

Barnett, Joseph H., assignor to J. H. Barnett, Son and Company Limited, Birmingham, England. Cocking mechanism for bolt action rifles. 2,474,456, June 28.

Barney, Arthur L., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Copolymers of vinyl isocoumarans with ethylenically unsaturated compounds and obtaining same. 2,474,612, June 28.

Barney, Arthur L., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Copolymers of vinyl isocoumarans with styrenes and obtaining same. 2,474,613, June 28.

Barney, Arthur L., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Copolymers of vinyl isocoumarans with 1,3-dienes and obtaining same. 2,474,614, June 28.

Barth, Robert M., Bronxville, assignor to The FR Corporation, New York, N. Y. Belt disengaging device. 2,474,457, June 28.

Batten, Percy H., assignee, trustee: *See*—
Boestad, Gustav K. W.
Lyxholm, Alf.

Baxter, Stanley M., Burlington, Mass. Producing stannic oxide. 2,474,645, June 28.

Bean, James J., Riverside, Conn., assignor to American Cyanamid Company, New York, N. Y. Heavy-media separation apparatus. 2,474,774, June 28.

Beaudoin, Rose, Westmount, Quebec, Canada. Hat carrier. 2,474,458, June 28.

Bechtold, Ira C., Whittier, F. M. Stephens, Los Angeles, and C. Newman, Hollywood, assignors to The Fluor Corporation, Ltd., Los Angeles, Calif. Pulsation elimination in fluid streams. 2,474,512, June 28.

Beck, Julius S., Los Angeles, Calif. Jar. 2,474,459, June 28.

Beechlyn, John T., Worcester, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Salt-water battery. 2,474,716, June 28.

Beeck, Otto A.: *See*—
Smith, Albert E., and Beeck.

Behrens, Paul H., Alhambra, Calif. Bracket attachment for motor vehicle windows. 2,474,513, June 28.

Behringer, Grover F., assignor to The American Steel Package Company, Defiance, Ohio. Split stator. 2,474,646, June 28.

Belcher, Harold H., Orange, Mass., assignor to Rodney Hunt Machine Co. Process and apparatus for tensionless handling of running lengths of materials. 2,474,717, June 28.

Bell Telephone Laboratories, Incorporated, assignee: *See*—
Ellis, William C., La Forge, Jr., and White.
Mason, Warren P.
Pease, Reginald M.
Howard, Stanley B.

Beloit Iron Works, assignee: *See*—
Mortensen, Robert W.

Bel-Ray Company, Inc., assignee: *See*—
Moxley, Auben E.

Benco, George F., Philadelphia, Pa. Comb. 2,474,212, June 28.

Bender, Samuel, Shreveport, La. Swing suspension. 2,474,718, June 28.

Bendix Aviation Corporation, assignee: *See*—
Collins, John E.
Dickey, John W., and Henry.
Divoll, Richard L.
Fell, William F., and Smith.
Gilbert, Samuel.
Miller, Donald L.

Bendix Home Appliances, Inc., assignee: *See*—
Erler, Walter C.

Bennington, Jesse R.: *See*—
Coleman, Melvin B., and Bennington.

Berger, Earl O.: *See*—
Robinson, Lawrence R., and Kyle I., and Berger.

Bergstein, Frank D., assignee: *See*—
Bergstein, Samuel.

Bergstein, Robert M., assignee: *See*—
Bergstein, Samuel.

Bergstein, Samuel, Cincinnati, Ohio, assignor to R. M. Bergstein and F. D. Bergstein, trustees. Producing packing structures. 2,474,891, June 28.

Berkworth, Frederick C., Verona, N. J. Reclaiming the hydrocarbon content of used hydrocarbon lubricants. 2,474,411, June 28.

Berkworth, Frederick C., Verona, N. J. Soapless-germicidally active detergent. 2,474,412, June 28.

Beutel, Ralph H., Newark, and M. Tishler, assignors to Merck & Co., Inc., Rahway, N. J. Method for separating the stereoisomers of α-hydroxy-β,β-dimethyl-gamma-butyrolactone. 2,474,719, June 28.

Billeter, Henry R., Highland Park, Ill. Tool-operating attachment. 2,474,720, June 28.

Bittner, Karl P., Philadelphia, Pa., assignor to Vacuum Concrete Inc Vacuum mold for molding concrete and the like. 2,474,721, June 28.

Bilt-Rite Baby Carriage Co., Inc., assignee: *See*—
Schwarzbaum, Hartley D.

Binkley, Charles H.: *See*—
Ward, Wilfred H., and Binkley.

Binney, Eric A., Ilkley, assignor to The English Electric Company Limited, London, England. Speed control of dynamoelectric machines. 2,474,647, June 28.

Binney, Eric A., Ilkley, assignor to The English Electric Company Limited, London, England. Dynamoelectric machine. 2,474,648, June 28.

Birdseye, Clarence, assignor to Dehydration, Inc., Gloucester, Mass. Treatment of vegetable tissue. 2,474,649, June 28.

Birdseye, Clarence, assignor to Dehydration, Inc., Gloucester, Mass. Treatment of vegetable tissue. 2,474,650, June 28.

Birney, Dewey H., assignor to Union Steel Products Company, Albion, Mich. Pallet or skid for lifting trucks or the like. 2,474,460, June 28.

Black, James F., Roselle, N. J., assignor to Standard Oil Development Company. Increasing the acomaticity of hydrocarbon oil. 2,474,213, June 28.

Black, James F., Roselle, N. J., assignor to Standard Oil Development Company. Preparation of zinc aluminate spinel catalyst. 2,474,214, June 28.

Blaha, Emil, Cheltenham assignor to Seias Corporation of America, Philadelphia, Pa. Firing the chambers of kilns. 2,474,301, June 28.

Blaw-Knox Company, assignee: *See*—
West, Carl H.

Blicke, Frederick F., Washtenaw County, assignor to Regents of the University of Michigan, Ann Arbor, Mich. Basic-alkyl esters and their salts. 2,474,651, June 28.

Block, Emil V., Stratford, assignor to United Aircraft Corporation, East Hartford, Conn. Bending frames pivotally connected by stretch producing hinges. 2,474,652, June 28.

Blume, Herbert E., Tripoli, Iowa. Adjustable walking aid. 2,474,722, June 28.

Boestad, Gustav K. W., Lidingo, Sweden, assignor, by mesne assignments, to J. C. Marble, New York, N. Y., L. M. Merrill, Westfield, N. J., and P. H. Batten, Racine, Wis. Helical gear compressor or motor. 2,474,653, June 28.

Bogema, Richard E., assignor to The Sturgis Products Company, Sturgis, Mich. Closure fastener for tumbling barrels. 2,474,461, June 28.

Boose, Elmer S., Tampa, Fla. Shuffleboard cue. 2,474,723, June 28.

Borchers, William G., assignor to Autographic Register Company, Hoboken, N. J. Method and apparatus for simultaneously securing together and perforating paper webs. 2,474,775, June 28.

Borg-Warner Corporation, assignee: *See*—
Putnam, Henry B.
Zeidler, Reinhold C.

Boudreaux, Emile V., Los Angeles, Calif. Combination comb and file. 2,474,570, June 28.

Brakeley, Paul W., Jr.: *See*—
Young, David W., and Brakeley.

Brakeley, Paul W., Jr., Plainfield, and D. W. Young, Roselle, N. J., assignors to Standard Oil Development Company. Low-temperature polymerization process. 2,474,571, June 28.

Breese Burners, Inc., assignee: *See*—
Huston, Milton D.

Breivogel, Philip J., Glen Ridge, assignor to White Laboratories, Inc., Newark, N. J. Reduction of ketones. 2,474,216, June 28.

Brenneke, Arthur M., New Castle, Ind., assignor to Perfect Circle Corporation. Piston ring. 2,474,413, June 28.

Brewer, John A., Kalamazoo, Mich., assignor, by decree of distribution, to R. A. Brewer. Musical instrument. 2,474,462, June 28.

Brewer, Rozelda A., assignee: *See*—
Brewer, John A.

Brooks, William B.: *See*—
Waggoner, Alvin G., and Brooks.

Brose, Horace B., and L. D. Brose, Chicago, Ill. Child's shampoo board. 2,474,572, June 28.

Brose, Lazetta D.: *See*—
Brose, Horace B. and L. D.

Budd Company, The, assignee: *See*—
Stever, William.

Bundy Tubing Company, assignee: *See*—
Payne, Arthur W.

Burden, Morton, Jr., Sewickley, Pa. Grenade fuse. 2,474,217, June 28.

Burden, Royal L., assignor of one-eighth to R. L. Dix, Springfield, and one-eighth to T. Q. Dix, Dayton, Ohio. Fly reel seat. 2,474,343, June 28.

Bureau, Arthur L., U. S. Navy. Belt loader. 2,474,218, June 28.

Burgess, Laurence E.: *See*—
May, Walter M., and Burgess.

Burkard, Perle N., and R. McNabney, assignors to Wyandotte Chemicals Corporation, Wyandotte, Mich. Preparing a water-soluble beryllium compound. 2,474,392, June 28.

Burks, George E., Peoria, Ill., assignor to Caterpillar Tractor Co., San Leandro, Calif. Vehicle suspension. 2,474,514, June 28.

Burrell, Ellis, Cook County, Ill., assignor to the United States of America as represented by the Secretary of the Navy. Wiring pencil. 2,474,463, June 28.

Busignies, Henri G., Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation. Pulse generating system. 2,474,219, June 28.

Busquet, Jan C., assignor to Machinefabriek Gebr. Stork & Co. N. V., Hengelo, Netherlands. Coupling cooling. 2,474,615, June 28.

Butler, Gray L.: *See*—
Spender, Donald L., and Butler.

Butler, Matthew B., assignee: *See*—
Graves, Michael, and Lankovski.

C-O-Two Fire Equipment Co., assignee: *See*—
Cahusac, Clarence N.

Cabes, Lucien A. B.: *See*—
De Vriendt, Charles, and Cabes.

Cabes, Lucien, A. B., Antwerp, Belgium, assignor to International Standard Electric Corporation, New York, N. Y. Pulse receiving circuit. 2,474,220, June 28.

Cable, Richard G., Oakdale, Blackwood, England. Pit prop and the like. 2,474,464, June 28.

Cahusac, Clarence N., assignor to C-O-Two Fire Equipment Co., Newark, N. J. Smoke detector and signal for ducts. 2,474,221, June 28.

Camp, Elza Q.: *See*—
Viles, Prentiss S., and Camp.

Campbell, Arthur W., assignor to Commercial Solvents Corporation, Terre Haute, Ind. Hexanebisdibutylamide as plasticizer for butadiene-acrylonitrile co-polymer. 2,474,776, June 28.

Carboloy Company, Inc., assignee: *See*—
Webb, Clarence D.

Carborundum Company, The, assignee: *See*—
McMullen, John C.

Carling, Wilfrid H., Westmont, Quebec, Canada. Measuring instrument. 2,474,466, June 28.

Carlson, David F., Gobles, Mich. Manufacturing artificial stone walls. 2,474,654, June 28.

Carlton, Carl A., Fort Worth, Tex. Device for filing type matrices. 2,474,465, June 28.

Carpenter, John A., Waban, Newton, Mass. Multihole punch. 2,474,344, June 28.

Carrell, Ross M., assignee: *See*—
Himmel, Loran B.

Carrier, Hermenegilde P., Charlestown, Mass. Split ring retainer extractor. 2,474,222, June 28.
Carroll, Guy B., Minneapolis, Minn. Retractable clothesline hanger. 2,474,655, June 28.
Carter, Helen B., Forest, Va. Diaper support. 2,474,724, June 28.
Carter, Peter G., Manchester, England, assignor to Imperial Chemical Industries Limited. Manufacture of chloropyrenes. 2,474,777, June 28.
Case, J. I., Company, assignee: *See*—
Russell, Stanley D.
Castiglia, Biagio, assignor to Wheel Aligning Necessities, Inc., New York, N. Y. Toe gauge. 2,474,616, June 28.
Caterpillar Tractor Co., assignee: *See*—
Burke, George E.
Davis, James M.
Cathodeon Limited, assignee: *See*—
Liebmann, Gerhard.
Cavalier, Salvatore A., Orlando, Fla. Bracket for shades, curtains, and draperies. 2,474,414, June 28.
Celanese Corporation of America, assignee: *See*—
Seymour, George W., Salvin, and Jones.
Sutherland, Frederick F., and Stearn.
Centrifugal & Mechanical Industries, Inc., assignee: *See*—
Howe, Andrew F.
Chevigny, Paul G., Paris, France, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Electron tube. 2,474,223, June 28.
Clancy, Gilbert E., assignor to Drayer-Hanson, Los Angeles, Calif. Reversible cycle heat pump. 2,474,304, June 28.
Clapp, Edwin A.: *See*—
Keir, James M., and Clapp.
Clark, Alfred, and H. R. Sailors, Bartlesville, Okla., assignors to Phillips Petroleum Company. Recovery of hydrocarbons from oil shale. 2,474,345, June 28.
Clark, Harry C., Jr., Belvidere, Ill. Safety jack base. 2,474,725, June 28.
Clark, Trevor H., Boonton, N. J., assignor to International Standard Electric Corporation, New York, N. Y., Electronic switch. 2,474,224, June 28.
Clarke, Thomas F., executor: *See*—
Ingoldby, Maurice K.
Clasen, John H.: *See*—
Evans, Russell T., and Clasen.
Claus, Walter B., Van Nuys, Calif., assignor, by mesne assignments, to Howe & Fant, Inc., South Norwalk, Conn. Ratchet mechanism. 2,474,656, June 28.
Clayton Manufacturing Company, assignee: *See*—
Griswold, Donald G.
Cline, Edward T., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Manufacture of artificial fibers. 2,474,617, June 28.
Cobb, Neal L., assignor to The Fellows Gear Shaper Company, Springfield, Vt. Generating clutch teeth for extended intimate contact. 2,474,393, June 28.
Cohen, Abe H., Pittsburgh, Pa. Game board of the lotto type. 2,474,573, June 28.
Cohen, Louis, assignee: *See*—
Wasserman, Arthur J.
Cole, Percy W., executor: *See*—
Ingoldby, Maurice K.
Coleman, Gerald H., Freeland, and P. A. Wolf, assignors to The Dow Chemical Company, Midland, Mich. Making liquid carbohydrate-rich foods resistant to microorganisms. 2,474,226, June 28.
Coleman, Gerald H., and P. A. Wolf, assignors to The Dow Chemical Company, Midland, Mich. Making carbohydrate foods resistant to microorganisms. 2,474,227, June 28.
Coleman, Gerald H., and P. A. Wolf, assignors to The Dow Chemical Company, Midland, Mich. Making proteinaceous and fatty foods resistant to microorganisms. 2,474,228, June 28.
Coleman, Gerald H., and P. A. Wolf, assignors to The Dow Chemical Company, Midland, Mich. Retarding growth of microorganisms in light alcoholic beverages. 2,474,229, June 28.
Coleman, Melvin B., and J. R. Bennington, Roanoke, Va., assignors to American Viscose Corporation, Wilmington, Del. Wax applicator for yarns, threads, and the like. 2,474,346, June 28.
Colgate-Palmolive-Peet Company, assignee: *See*—
Ittner, Martin H.
Collins, John E., Belleville, assignor to Bendix Aviation Corporation, Teterboro, N. J. Flexible drive. 2,474,347, June 28.
Commercial Solvents Corporation, assignee: *See*—
Campbell, Arthur W.
Morey, Glen H.
Senkus, Murray.
Tryon, Philip F.
Congoleum-Nairn Inc., assignee: *See*—
Corson, Ralph.
Conley, Arthur W., Shaker Heights, assignor to The Heater Corporation, Cleveland, Ohio. Heating apparatus. 2,474,467, June 28.
Cook, James M., and R. C. Lang, assignors to Kalamazoo Stove and Furnace Company, Kalamazoo, Mich. Cooking stove broiler and door assembly. 2,474,225, June 28.
Cornelius, James R., Coventry, England. Supporting of casements. 2,474,468, June 28.
Corson, Ralph, Arlington, N. J., assignor to Congoleum-Nairn Inc. Roll packaging means. 2,474,657, June 28.
Cox, David C., assignor to Electric Sorting Machine Company, Grand Rapids, Mich. Two-dimensional photoelectric sorting. 2,474,230, June 28.
Cox, William J., Woodruff, Utah. Tire tool. 2,474,515. June 28.
Craddock, James E., Richmond, Va. Oil heater for hot-water furnaces. 2,474,574, June 28.
Craig, Gillison, assignor to Riley Stoker Corporation, Worcester, Mass. Beater element for pulverizing apparatus. 2,474,305, June 28.
Crane Co., assignee: *See*—
Anastis, James B., and Fleroh.
Crompton & Knowles Loom Works, assignee: *See*—
Krukonis, Alexander C.
Turner, Richard G.
Crosley, Ralph V., Pacoima, Calif. Sliding ball hitch for automobiles. 2,474,231, June 28.
Cross, Leonard W., Warwood, assignor to Wheeling Steel Corporation, Wheeling, W. Va. Backed lath and manufacture thereof. 2,474,778, June 28.
Crouch, Leonard W.: *See*—
Henry, James E., and Crouch.
Croxall, Willard J.: *See*—
Neher, Harry T., Kroeker, and Croxall.
Curtis, Helene, Industries, Inc., assignee: *See*—
Whyte, John.
Cutler-Hammer, Inc., assignee: *See*—
Fath, Douglas W.
Kuhn, Clarence W.
Czerner, Severin F., Kings Mill, Tex. Variable displacement radial vane rotary motor. 2,474,348, June 28.
Dacey, Mary M., executor, assignee: *See*—
Moore, Thomas F.
Dach, Max, Flushing, N. Y. Safety control device. 2,474,232, June 28.
D'Amico, Sebastiano, assignee: *See*—
Parilla, Daniel.
Daniel, Walter, assignor to The Troy Sunshade Company, Troy, Ohio. Tractor umbrella. 2,474,516, June 28.
Danner, Edward, Newark, Ohio. Glassware-forming apparatus. 2,474,302, June 28.
Daum, John L.: *See*—
McCloud, Robert A., Danm, and Bacon.
Daum, John L., Oakland, R. A. McCloud, and T. P. Bacon, San Leandro, Calif. Apparatus for heating tires. 2,474,517, June 28.
Davies, James M., Peoria, Ill., assignor to Caterpillar Tractor Co., San Leandro, Calif. Internal-combustion engine oil cooling means. 2,474,518, June 28.
Davis, Richard M., Oklahoma City, Okla., assignor to Standard Oil Development Company. Oscillographic recording apparatus. 2,474,803, June 28.
Deakin, Gerald, assignor to International Standard Electric Corporation, New York, N. Y. Selector brush. 2,474,233, June 28.
Degering, Edward F., La Fayette, Ind., and G. van Blema, Jackson Heights, N. Y., assignors to Purdue Research Foundation, La Fayette, Ind. Azo compounds from 1-di-n-butylamino-2-nitro-butane. 2,474,779, June 28.
Degering, Edward F., La Fayette, Ind., and G. van Blema, Jackson Heights, N. Y., assignors to Purdue Research Foundation, La Fayette, Ind. Azo compounds from 1-N-morpholino-2-nitro propane. 2,474,780, June 28.
Dehydration, Inc., assignee: *See*—
Birdseye, Clarence.
De la Grange, Charles, El Monte, Calif. Poultry drip fountain. 2,474,469, June 28.
De la Source, Charles, Paris, assignor to Societe: Les Fils de Peugeot Freres, Valentigney, France. Drill holder and like tool. 2,474,726, June 28.
De Nie, Willem L. J., Amsterdam, Netherlands, assignor to Shell Development Company, San Francisco, Calif. Production of vinyl chloride. 2,474,206, June 28.
Denier, James C., Cincinnati, Ohio. Rail fitting. 2,474,727, June 28.
Desmone, John A.: *See*—
Kohl, John C., and J. A. Desmone.
De Vriendt, Charles, and L. A. B. Cabes, Antwerp, Belgium, assignors to International Standard Electric Corporation, New York, N. Y. Electrical signal transmission system. 2,474,234, June 28.
Deyrup, Alden J., Westfield, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Dielectric strength test for capacitors. 2,474,416, June 28.
Dickey, John W., and M. M. Henry, Elmira, assignors to Bendix Aviation Corporation, Elmira Heights, N. Y. Electromagnetic pump. 2,474,349, June 28.
Dilworth, Richard M., Hinsdale, Ill., assignor to General Motors Corporation, Detroit, Mich. Heating and ventilating system. 2,474,394, June 28.
Divoll, Richard L., Maywood, assignor to Bendix Aviation Corporation, Teterboro, N. J. Altitude control. 2,474,618, June 28.
Dix, Russell L., assignee: *See*—
Burden, Royal L.
Dix, Tira Q., assignee: *See*—
Burden, Royal L.
Dixon, James K., Riverside, Conn., assignor to American Cyanamid Company, New York, N. Y. Producing pyrazine by catalytic dehydrogenation of piperazine. 2,474,781, June 28.

Dixon, James K., Riverside, Conn., assignor to American Cyanamid Company, New York, N. Y. Catalytic dehydrogenation of piperazine. 2,474,782, June 28.
Dodge, Merton L., Seattle, Wash. Belt shifting mechanism. 2,474,470, June 28.
Doherty, Herbert W.: *See*—
Watter, Michael, and Doherty.
Dolan, Charles H., II, Old Greenwich, Conn. Shock absorber and stabilizer. 2,474,471, June 28.
Doran, Alfred A., assignee: *See*—
Golden, Sue.
Doran, Lafayette, Scranton, Pa. Reversible bearing. 2,474,728, June 28.
Dorr, Gilbert G., Nashville, Tenn., assignor to American Telephone and Telegraph Company. Type pallet aligning jig. 2,474,658, June 28.
Doub, Leonard, assignor to Parke, Davis & Company, Detroit, Mich. Cellulosic products. 2,474,306, June 28.
Dow Chemical Company, The, assignee: *See*—
Coleman, Gerald H., and Wolf.
Dow Corning Corporation, The, assignee: *See*—
Taylor, Ambrose G.
Thayer, Mary E.
Dow, William G.: *See*—
Early, Harold C., Dow, and Ohlson.
Doyle, Charles C., Willoughby, Ohio. Domestic electric heater. 2,474,472, June 28.
Drayer-Hanson, assignee: *See*—
Clancy, Gilbert E.
Dresser, Oscar C., Arlington, Va., O. Norgorden, Washington, D. C., F. J. Shanahan, Alexandria, and C. R. Shuler, Stanley, Va. Pneumatic impact device. 2,474,235, June 28.
Drzewiecki, Joseph, Algonac, Mich. Lock for automobile doors. 2,474,519, June 28.
Du Bois, Jesse E., New York, N. Y. Bottle support. 2,474,416, June 28.
Dubost, Paul: *See*—
Durel, Pierre, and Dubost.
Du Pont, E. I., de Nemours & Company, assignee: *See*—
Barney, Arthur L.
Cline, Edward T.
Deyrup, Alden J.
Durbin, Lauretta H., assignor of fifty per cent to M. M. Durbin, Casper, Wyo. Novelty ornament. 2,474,236, June 28.
Durbin, Miner M., assignee: *See*—
Durbin, Lauretta H.
Durel, Pierre, and P. Dubost, assignors to Societe des Usines Chimiques Rhone-Poulenc, Paris, France. Insulin preparations. 2,474,729, June 28.
Dzus, William, West Islip, N. Y. Fastener. 2,474,799, June 28.
Early, Harold C., Beaverton, and W. G. Dow and R. Ohlson, Ann Arbor, assignors to General Motors Corporation, Detroit, Mich. High-frequency transformer. 2,474,395, June 28.
Eastman Kodak Company, assignee: *See*—
Weissberger, Arnold, Salminen, and Vittum.
Ebert, Ludwig, New York, assignor to Elnson-Freeman Co., Inc., Long Island City, N. Y. Foldable display device and easel. 2,474,659, June 28.
Eby, Lawrence T., Roselle, N. J., assignor to Standard Oil Development Company. Preparation of tertiary alkyl sulfenamides. 2,474,237, June 28.
Eck, Myron Y., and J. J. Hodapp, Dayton, Ohio. Single nail loop antenna. 2,474,238, June 28.
Eger, Laszlo W.: *See*—
Weidner, Charles L., and Eger.
Ellerman, George E., Milwaukee, Wis., assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa. Polysulfone resin plasticized with ester of organic sulfonic acid. 2,474,350, June 28.
Elnson-Freeman Co., Inc., assignee: *See*—
Ebert, Ludwig.
Ekco Products Company, assignee: *See*—
Jackson, Joseph G.
Electric Sorting Machine Company, assignee: *See*—
Cox, David C.
Electrol Incorporated, assignee: *See*—
Ashton, Benjamin N.
Electrolux Corporation, assignee: *See*—
Wahlberg, Eric C.
Ellis, William C., Maplewood, N. J., and L. H. La Forge, Jr., San Bernardino, Calif., and A. H. White, Summit, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Ballast lamp. 2,474,473, June 28.
English Electric Company Limited, The, assignee: *See*—
Binney, Eric A.
Erler, Walter C., assignor to Bendix Home Appliances, Inc., South Bend, Ind. Ironer shoe and table. 2,474,351, June 28.
Espinasse, Gustave H. G. and J. P. C., Ales Gard, France. Ice cream machine with perforated screw agitator. 2,474,730, June 28.
Espinasse, Jean P. C.: *See*—
Espinasse, Gustave H. G., and J. P. C.
Evans, Russell T., and J. H. Clasen, Anaheim, assignors to A. M. Mellen, Whittier, Calif. Two-way plow. 2,474,731, June 28.
Everett Piano Company, assignee: *See*—
Stapely, George H.
FR Corporation, The, assignee: *See*—
Barth, Robert M.
F-R Machine Works, assignee: *See*—
Hollstein, Oswald C.
Fairchild Camera and Instrument Corporation, assignee: *See*—
Rattray, George.
Fairley, Frank: *See*—
Hodgson, Kenneth G., and Fairley.
Farrell, Robert A., and C. L. Wagner, Menasha, assignors to Marathon Paper Mills Company, Rothschild, Wis. Heat-sealable sheet material. 2,474,619, June 28.
Fath, Douglas W., assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Coiling machine controller. 2,474,620, June 28.
Favre, Marcel G., Wettingen, assignor to "Patelhold" Patentverwertungs-& Elektro-Holding A.-G., Glarus, Switzerland. Heating device for hot cathode tubes. 2,474,575, June 28.
Federal Telephone and Radio Corporation, assignee: *See*—
Busignies, Henri G.
Chevigny, Paul G.
Garrison, Kenton K.
Grieg, Donald D.
Hampshire, Robert A.
Lapham, Edmund F., Jr.
Leet, George R.
Leibe, Frank A., and Mahler.
Litton, Charles V.
Marchand, Nathan.
Martinez, Clement.
Master, Warren S.
Nordlin, Henry G.
Oatlund, Evert M., and Sokoloff.
Pickles, Sidney B.
Young, Norman H., Jr.
Federico, Joseph, Newark, N. J. Toothbrush sterilizer. 2,474,621, June 28.
Fedotoff, Nicholas V., Lynbrook, N. Y., assignor to Hazeltine Research, Inc., Chicago, Ill. Master-slave system. 2,474,576, June 28.
Feild, Bert D.: *See*—
Tittlett, Stanley H.
Fell, William F., and E. S. Smith, Hasbrouck Heights, assignors to Bendix Aviation Corporation, Teterboro, N. J. Automatic control system for dynamoelectric machines. 2,474,732, June 28.
Fell, William V.: *See*—
Vaughn, Bernard G., and Fell.
Fellows Gear Shaper Company, The, assignee: *See*—
Cobb, Neal L.
Williamson, James L.
Ferche, Joseph, Chicago, Ill. Rail fastener. 2,474,352, June 28.
Fleroh, Otto E.: *See*—
Amstutz, James B., and Fleroh.
Fitzpatrick, Frank L., East Malvern, Victoria, assignor to Rocla Limited, Springdale, Victoria, Australia. Manufacture of prestressed concrete pipe and the like. 2,474,660, June 28.
Fleming, Cornelius S., Los Angeles, Calif. Bronzing materials. 2,474,520, June 28.
Fleming, Edward C.: *See*—
Fleming, William E. and E. C.
Fleming, William E., Cedar Rapids, Iowa. Device for sharpening cutlery. 2,474,623. June 28.
Fleming, William E. and E. C., Cedar Rapids, Iowa. Device for sharpening cutlery. 2,474,622, June 28.
Flesch, Norman, assignor to American Steel Foundries, Chicago, Ill. Brakehead balancing device. 2,474,239, June 28.
Fluor Corporation, Ltd., The, assignee: *See*—
Bechtold, Ira C., Stephens, and Newman.
Marsh, Earle S.
Stephens, Foster M.
Stephens, Foster M., and Yates.
Foerste, William, Pelham Manor, N. Y.; A. Kane, administratrix of said William Foerste, deceased, assignor of one-half to E. A. Quarrie, Scarsdale, N. Y. Compensated magnetic-leakage-type transformer. 2,474,624, June 28.
Fogarty, John G., Rochester, N. Y. Tire chain and mounting device therefor. 2,474,521, June 28.
Folb, Henry: *See*—
Silbert, Sidney, and Folb.
Folke, Bengt E., Mamaroneck, and R. H. Shepard, assignors to Nathan Manufacturing Company, New York, N. Y. Lubricating device. 2,474,661, June 28.
Fort Wayne Tool, Die and Engineering Company, assignee: *See*—
Nill, Richard G.
Fossa, Joseph, Salem, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Lasting machine. 2,474,307, June 28.
Franck, Kurt, and V. S. Wince, Newark, Ohio, assignors to Holophane Company, Inc., New York, N. Y. Surface attached lighting equipment. 2,474,308, June 28.
Franco-Ferreira, Edgard C.: *See*—
Lambert, Albert L., and Franco-Ferreira.
Frick Company, assignee: *See*—
Spoonhour, Charles L.
Friedman, Herbert, Arlington, Va. Focusing X-ray monochromator. 2,474,240, June 28.

Friend, Albert W., Cambridge, Mass., assignor to Radio Corporation of America. Electron discharge device. 2,474,241, June 28.
Frost, Thomas, Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,658, June 28.
Fuller, Calvin S., Bay City, Mich., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Semiconductive translating device. 2,474,242, June 28.
Gaines, Robert, Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,659, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,660, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,661, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,662, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,663, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,664, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,665, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,666, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,667, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,668, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,669, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,670, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,671, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,672, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,673, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,674, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,675, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,676, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,677, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,678, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,679, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,680, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,681, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,682, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,683, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,684, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,685, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,686, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,687, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,688, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,689, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,690, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,691, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,692, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,693, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,694, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,695, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,696, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,697, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,698, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,699, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,700, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,701, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,702, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,703, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,704, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,705, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,706, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,707, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,708, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,709, June 28.
Gallagher, Thomas J., Jr., Cleveland, Ohio. Fluid pressure brake. 2,474,710, June 28.

Friend, Albert W., Cambridge, Mass., assignor to Radio Corporation of America. Power recovery circuit for cathode-ray apparatus deflection systems. 2,474,474, June 28.

Fuller, Reginald C., Brighton, England. Electric pressure indicator. 2,474,662, June 28.

Gaines, Charles, Vallejo, Calif. Music sheet turner. 2,474,522, June 28.

Gallagher, William S., Brantford, Ontario, Canada. Self-feeding paste floor wax applier. 2,474,733, June 28.

Gancer, Charles E., Oak Park, Ill. Try square. 2,474,577, June 28.

Garrett Corporation, The, assignee: *See*—
Ramsaur, Walter R.

Garrison, Kenton K., East Orange, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Piezoelectric crystal structures. 2,474,241, June 28.

General American-Duryea Corporation, assignee: *See*—
Wieden, Herbert J., Traphagen, and Stoner.

General Aniline & Film Corporation, assignee: *See*—
Slifkin, Sam C.

General Controls Co., assignee: *See*—
Ray, William A.

General Electric Company, assignee: *See*—
Gilliam, William F.
Hiehle, Michael E.
Thomas, Charles A.

General Motors Corporation, assignee: *See*—
Arthur, James L.
Dilworth, Richard M.
Early, Harold C., Dow, and Ohlsson.
Groves, Ronald C.
Hook, Flavis E., and Riggs.
Lovell, Wheeler G., Miller, Mulligan, and Lichtenwainer.
Van Degrift, Thomas C.
Short, Brooks H., and Hartzell.

Gerow, Theron G., Chicago, Ill. Opposed-roll crusher with interlocking teeth of graduated heights. 2,474,625, June 28.

Gidley, Philip T., Fairhaven, Mass., assignor, by mesne assignments, to Standard Oil Development Company. Weather resistant composition. 2,474,306, June 28.

Gieringer, Carl K., Long Branch, N. J. Adjustable antenna. 2,474,242, June 28.

Gilbert, Samuel, Cedar Grove, assignor to Bendix Aviation Corporation, Teterboro, N. J. Engine starter apparatus. 2,474,784, June 28.

Gillen, George A., Bronx, N. Y. Heating apparatus for burning a liquid fuel spray. 2,474,417, June 28.

Gillett, Harry: *See*—
Potter, Raymond I., and Gillett.

Gilliam, William F., Schenectady, N. Y., assignor to General Electric Company. Chlorinated methylchlorosilanes and their hydrolysis products. 2,474,578, June 28.

Gludice, Gennaro, assignee: *See*—
Ruis, Ramon A.

Glasgow, Clarence O., assignor to National Tank Company, Tulsa, Okla. Dehydrator. 2,474,475, June 28.

Gluck, Fred C., assignor to Minerva Wax Paper Company, Minerva, Ohio. Carton. 2,474,783, June 28.

Goddard, De Witt R., Riverhead, N. Y., assignor to Radio Corporation of America. Remote-control system for selectively controlling a plurality of adjustable elements. 2,474,663, June 28.

Godon, Wilmot W.: *See*—
Lipman, Maurice S., and Godon.

Golden, Sue, assignor to Alfred A. Doran, New York, N. Y. Dispenser for facial tissues. 2,474,784, June 28.

Goldstine, Hallan E., and O. F. Voigt, Port Jefferson Station, N. Y., assignors to Radio Corporation of America. Electrical connector. 2,474,310, June 28.

Goodman, William A., Atlanta, Ga. Armature winding machine. 2,474,353, June 28.

Goodrich, B. F., Company, The, assignee: *See*—
Hollerith, Charles.

Goulds Pumps, Inc., assignee: *See*—
Mann, John.

Grabeau, Walter G., West Roxbury, Mass. Electric heating system. 2,474,664, June 28.

Gradisar, Albin A.: *See*—
Aitcheson, Thomas G., and Gradisar.

Graham, Philip J., assignor to Trig Corporation, Worcester, Mass. Hinged casing structure. 2,474,311, June 28.

Graves, Michael, and A. Lankovski, Los Angeles, Calif., assignors to Matthew B. Butler, Chicago, Ill. Shovel attachment for self-loading trucks. 2,474,418, June 28.

Greenberg, Elebert E.: *See*—
Todd, Willis L., and Greenberg.

Greenwald, Lewis, Neptune, N. J. Line pulse modulator. 2,474,243, June 28.

Grieg, Donald D., Forest Hills, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Amplitude modulated time modulated pulse system. 2,474,244, June 28.

Griswold, Donald G., assignor to Clayton Manufacturing Company, Alhambra, Calif. Remote-control means for valves. 2,474,355, June 28.

Groves, Ronald C., assignor to General Motors Corporation, Detroit, Mich. Injection pump. 2,474,396, June 28.

Guanella, Gustav, Zurich, assignor to "Patelhold" Patentvertungs- & Electro-Holding A. G., Glarus, Switzerland. Automatic frequency control circuits. 2,474,354, June 28.

Guarino, Frank J., assignee: *See*—
Guarino, John R.

Guarino, John R., assignor of one-fourth to Frank J. Guarino, one-fourth to Vincent T. Guarino, and one-fourth to Louis J. Guarino, Brooklyn, N. Y. Pneumatic blood treating apparatus. 2,474,665, June 28.

Guarino, Louis J., assignee: *See*—
Guarino, John R.

Guarino, Vincent T., assignee: *See*—
Guarino, John R.

Gullett Gin Company, assignee: *See*—
Wallace, Jeffrey J.

Gunning, Alfred, Houston, Tex. Spring-driven screw driver. 2,474,620, June 28.

Guyer, Reynolds, assignor to Waldorf Paper Products Company, St. Paul, Minn. Carton. 2,474,476, June 28.

Guyer, Reynolds, assignor to Waldorf Paper Products Company, St. Paul, Minn. Triple-edge reclosing carton. 2,474,523, June 28.

Haantjes, Johan, and B. W. van I. Schenau, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Circuit arrangement for producing a saw-tooth current in the deflection coil of a cathode-ray tube and for producing a direct voltage for this tube. 2,474,666, June 28.

Hague, Floyd T., Drexel Hill, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Pulverized fuel distributor for burner nozzles. 2,474,477, June 28.

Hainke, Paul W., Hutchinson, Kans., assignor, by mesne assignments, to William H. Hainke. Power lawn mower. 2,474,524, June 28.

Hainke, William H., assignee: *See*—
Hainke, Paul W.

Hale, Jesse R., Berkley, Mich. Fuel injection apparatus. 2,474,419, June 28.

Halpern, Gregory, New York, assignor to Polychrome Corporation, Yonkers, N. Y. Stylus. 2,474,312, June 28.

Halstead, Paul R.: *See*—
Yount, Stanley G., and Halstead.

Hamilton, Horace, assignee: *See*—
Hurley, Walter G.

Hampshire, Robert A., West Caldwell, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Null measuring bridge. 2,474,245, June 28.

Hancock, Stewart F., assignee: *See*—
Allen, Harold F.

Hansen, Ingwald B.: *See*—
Kleppen, Emil, and Hansen.

Hardison, Julian B., assignor to D. M. Harman, Burlington, N. C. Attachment for hosiery machines. 2,474,246, June 28.

Hardy, Elizabeth M.: *See*—
Hardy, William B. and E. M.

Hardy, William B. and E. M., Bound Brook, N. J., assignors to American Cyanamid Company, New York, N. Y. Printing with sulfuric esters of leuco vat dyestuffs. 2,474,785, June 28.

Harman, David M., assignee: *See*—
Hardison, Julian B.

Harmon, William S., Elizabeth, assignor to Merck & Co., Inc., Rahway, N. J. Dehydration of compounds by distillation with hydrophobic oil. 2,474,735, June 28.

Harris, Ernest W., Detroit, Mich. Electrical distribution jack. 2,474,356, June 28.

Harry, Lloyd A.: *See*—
Warden, Alva F., and Harry.

Hart, Joseph L., Jr., Chickasha, Okla. Air cleaning apparatus. 2,474,478, June 28.

Hartford-Empire Company, assignee: *See*—
Weatin, Daniel B.

Hartford National Bank and Trust Company, assignee, as trustee: *See*—
Haantjes, Johan, and van Ingen Schenau.
Spoor, Theodorus A.

Hartzell, Herman L.: *See*—
Short, Brooks H., and Hartzell.

Harvey, Robert L., Detroit, Mich. Speedboat hull. 2,474,667, June 28.

Hastings Manufacturing Company, assignee: *See*—
Phillips, Harold P.

Hattan, Mark, Dayton, Ohio. Signal type torque indicating wrench. 2,474,247, June 28.

Haug, Eugene H., Glencoe, assignor to Modern Controls, Inc., Chicago, Ill. Control for vapor discharge tubes and electric arcs. 2,474,525, June 28.

Haynes, Elizabeth E., Brighton, Mass. Drill grinder. 2,474,357, June 28.

Hazeltine Research, Inc., assignee: *See*—
Fedotoff, Nicholas V.
Wheeler, Harold A.

Healy, John J., Jr., Brookline, M. H. Taylor, Stoneham, and F. A. Abbiati, Longmeadow, Mass., assignors to Monsanto Chemical Company, St. Louis, Mo. Pickling of stainless steels. 2,474,526, June 28.

Heater Corporation, The, assignee: *See*—
Conley, Arthur W.

Heiligmann, Randall G.: *See*—
Hersberger, Arthur B., and Heiligmann.

Heintz Manufacturing Company, assignee: *See*—
Lambert, Albert L., and Franco-Ferreira.

Heisner, Donald A., assignor to The Lorain County Radio Corporation, Lorain, Ohio. Remote-control system. 2,474,527, June 28.

Helfenbein, Richard C.: *See*—
Zabel, William C. P., and Helfenbein.

Hendrix, John F., Monday, Tex. Hoe stand. 2,474,579, June 28.

Henne, Julius A., Rochester, assignor to Webster Industries, Inc., Webster, N. Y. Fastening means for camera covers. 2,474,397, June 28.

Henry, James E., and L. W. Crouch, Dayton, Ohio. Photogrammetric caliper. 2,474,248, June 28.

Henry, Millard M.: *See*—
Dickey, John W.

Herbolsheimer, Roger C., Garrett, Ind. Furniture. 2,474,668, June 28.

Héreng, André, Paris, France. Cellulose saccharidication. 2,474,669, June 28.

Heritage, Clark C., Cloquet, assignor to Wood Conversion Company, St. Paul, Minn. Surface fluxing coated liner. 2,474,398, June 28.

Hersberger, Arthur B., Drexel Hill, assignor to The Atlantic Refining Company, Philadelphia, Pa. Polymerization of olefinic hydrocarbons with Friedel-Crafts catalysts. 2,474,671, June 28.

Hersberger, Arthur B., Drexel Hill, and R. G. Heiligmann, Yeadon, assignors to The Atlantic Refining Company, Philadelphia, Pa. Production of propylene polymers. 2,474,670.

Hess, Frederic O., Philadelphia, Pa., assignor to Selas Corporation of America. Incandescent gas burner for furnace walls. 2,474,313, June 28.

Heywood, Basil J., Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited. Monoazo dyestuffs. 2,474,736, June 28.

Heywood, Basil J., Blackley, Manchester, England, assignor to Imperial Chemical Industries, Limited. Monoazo dyestuffs. 2,474,737, June 28.

Hiehle, Michael E., Syracuse, N. Y., assignor to General Electric Company. Voltage regulating system. 2,474,580, June 28.

Hill, Earl G., Pulaski, Va., assignor to Textile Appliance Corporation, New York, N. Y. Mandrel. 2,474,672, June 28.

Himmel, Loran B., West Des Moines, Iowa, assignor, by mesne assignments, to R. M. Carrell. High-frequency dielectric heating apparatus. 2,474,420, June 28.

Hinchman, Alva K., Bryn Mawr, Pa. Nozzle and tip for burning and welding torches. 2,474,673, June 28.

Hodapp, Jerome J.: *See*—
Eck, Myron Y., and Hodapp.

Hodgson, Kenneth G., and F. Fairley, London, England, assignors to International Standard Electric Corporation, New York, N. Y. Multichannel carrier communication system. 2,474,249, June 28.

Hoff, James L.: *See*—
Tama, Mario, and Hoff.

Holden, Artemas F., New Haven, Conn. Salt bath for treating stainless steel products. 2,474,674, June 28.

Hollerith, Charles, Jackson, Mich., assignor, by mesne assignments, to The B. F. Goodrich Company, Akron, Ohio. Hydraulically operated brake valve. 2,474,738, June 28.

Hollstein, Oswald C., Secaucus, N. J., assignor to F-R Machine Works, Long Island City, N. Y. X-ray equipment. 2,474,421, June 28.

Hollstein, Oswald C., Secaucus, N. J., assignor to F-R Machine Works. X-ray equipment. 2,474,422, June 28.

Holophane Company, Inc., assignee: *See*—
Kranck, Knrt, and Wince.
McPhail, Robert G.
Rolph, Thomas W.
Wince, Vearl S.

Hook, Flavis E., and R. O. Riggs, Anderson, Ind., assignors to General Motors Corporation, Detroit, Mich. Coil shaping apparatus. 2,474,528, June 28.

Hoover Company, The, assignee: *See*—
Segesman, Louis E.
White, Harry B.

Howard, Stanley R., North Quincy, Mass., assignor, by mesne assignments, to Belmont Radio Corporation, Chicago, Ill. Power-driven mechanism and portable demountable supporting standard therefor. 2,474,250, June 28.

Howe, Andrew F., assignor to Centrifugal & Mechanical Industries, Inc., St. Louis, Mo. Dewatering and coking slurry coal. 2,474,251, June 28.

Howe & Fant, Inc., assignee: *See*—
Claus, Walter B.

Howell, Lynn G., Silver Spring, Md., assignor to Standard Oil Development Company. Well logging. 2,474,581, June 28.

Howle, Kenneth, assignor to Wildman Mfg. Co., Norristown, Pa. Shock-damping verge plate. 2,474,627, June 28.

Howlett, John W., and A. J. Woolcott, assignors of one-third to Wellworth Piston Rings Limited, Lymington, England. Means for lapping taper sided split rings. 2,474,358, June 28.

Hullinger, John H., San Francisco, Calif. Universal joint. 2,474,529, June 28.

Humphrey, Harvey J., Cleveland, Ohio. Permeable breakwater. 2,474,786, June 28.

Hurley, Walter G., Gladewater, assignor of one-third to H. Hamilton, Wharton, Tex. Stage lift pump. 2,474,423, June 28.

Hurvitz, Hyman, Washington, D. C. Indicator. 2,474,628, June 28.

Huston, Milton D., assignor, by mesne assignments, to Breese Burners, Inc., Santa Fe, N. Mex. Pot type oil burner and pilot means therefor. 2,474,530, June 28.

Hyde, Lawrence K., Washington, D. C., assignor to The Baldwin Locomotive Works. Rate of movement control apparatus. 2,474,424, June 28.

Ilford Limited, assignee: *See*—
Kendall, John D., Suggate, and Wood.

Imperial Chemical Industries Limited, assignee: *See*—
Carter, Peter G.
Heywood, Basil J.

Industrial Tape Corporation, assignee: *See*—
Weldner, Charles L., and Eger.

Ingersoll-Rand Company, assignee: *See*—
Jimerson, Francis A.

Ingoldby, Maurice K., deceased, Tynemouth, England; by T. F. Clarke, Swanley, and P. W. Cole Purley, executors, assignors to Vickers-Armstrongs Limited, London, England. Fire control apparatus for guns. 2,474,730, June 28.

Ingrom, Alton J., assignee: *See*—
Wolf, Allen C.

International Standard Electric Corporation, assignee: *See*—
Back, Raymond R.
Cabes, Lucien A. B.
Clark, Trevor H.
Deakin, Gerald.
De Vriendt, Charles, and Cabes.
Hodgson, Kenneth G., and Fairley.
Jacobsen, Bent B.
Kelly, Richard.
Smith, William F.
Terry, Victor J., and Kelly.

Iron Fireman Manufacturing Company, assignee: *See*—
Richardson, Max C.

Isaacs, Marcus M., Sydney, New South Wales, Australia. Fastening means for trousers and other garments. 2,474,629, June 28.

Isacco, Vittorio, London, England. Jet engine. 2,474,350, June 28.

Ittner, Hildegard H., executrix: *See*—
Ittner, Martin H.

Ittner, Martin H., deceased, Township of Wall, Monmouth County, N. J.; by H. H. Ittner, executrix, West Hartford, Conn., assignor to Colgate-Palmolive-Peet Company, Jersey City, N. J. Preparing partial esters of glycerine and fatty acids. 2,474,740, June 28.

Ivory, Margaret C., Massillon, Ohio. Combination chair and table unit. 2,474,252, June 28.

Jackson, Albert I., assignee: *See*—
Wolf, Allen C.

Jackson, Joseph G., assignor to Ekco Products Company, Chicago, Ill. Cutlery construction. 2,474,425, June 28.

Jacobsen, Bent B., London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Measuring difference in frequency of alternating currents. 2,474,253, June 28.

Jamison, Charles R., Morgantown, W. Va. Control means for airplane landing gear for landing crosswind. 2,474,630, June 28.

Jankowski, Vladimir, Detroit, Mich. Toolholder. 2,474,675, June 28.

Jelley, Cleveland H., Detroit, Mich. Internal-combustion engine. 2,474,631, June 28.

Jimerson, Francis A., Athens, Pa., assignor to Ingersoll-Rand Company, New York, N. Y. Retainer. 2,474,360, June 28.

Johns-Manville Corporation, assignee: *See*—
Koehne, Frank J.

Johnson, Herbert C., Wilmette, Ill. Fruit juice extractor. 2,474,399, June 28.

Jones, Paul C., Nichols, S. C. Electric water heater. 2,474,361, June 28.

Jones, Wilford D.: *See*—
Seymour, George W., Salvin, and Jones.

Jung, Ingvar K. E., Langedrag, near Goteborg, Sweden. Gas turbine plant. 2,474,582, June 28.

Justice, Jesse L., Huntington Park, Calif., assignor to L. A. Young Spring & Wire Corporation, Detroit, Mich. Life raft or float. 2,474,479, June 28.

Kalamazoo Stove and Furnace Company, assignee: *See*—
Cook, James M., and Lang.

Kane, Anna, administratrix: *See*—
Foerste, William.

Kauffman, Leroy A., Washington, D. C. Machine for impregnating material with liquid. 2,474,254, June 28.

Kearby, Kenneth K., Cranford, N. J., assignor to Standard Oil Development Company. Preparation of a zinc aluminate-group VI metal oxide catalyst. 2,474,215, June 28.

Kearse, George P., assignor to American Phenolic Corporation, Chicago, Ill. Antenna system. 2,474,480, June 28.

Keir, James M., Bronxville, and E. A. Clapp, Niagara Falls, N. Y., assignors to The Linde Air Products Company. Method of and apparatus for electrically welding studs to surfaces. 2,474,531, June 28.

Kelley-Koett Manufacturing Co., The, assignee: *See*—
Todd, William L., and Greenberg.

Kelly, Ernest B., Chicago, Ill., assignor to Myerson Tooth Corporation, Cambridge, Mass. Forming artificial teeth. 2,474,676, June 28.

Kelly, Richard: *See*—
Terry, Victor J., and Kelly.

Kelly, Richard, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Power supply system for carrier communication systems. 2,474,285, June 28.

Kendall, John D., H. G. Suggate, and H. W. Wood, Ilford, assignors to Ilford Limited, Ilford, Essex, England. Cyanine dyestuffs and dyestuff intermediates. 2,474,420, June 28.

Kending, Ernest K., Flushing, N. Y. Hair drier. 2,474,427, June 28.

Keranen, Theodore S., Detroit, Mich. Helicopter. 2,474,362, June 28.

Kindt, Ernest T., Lakewood, Ohio. Pattern marking letter. 2,474,428, June 28.

Kinion, Richard L., Denver, Colo. Aerial bomb. 2,474,256, June 28.

Kirkland, Harold R., Morristown, N. J. Dimmer device for indicating lamps. 2,474,677, June 28.

Kitchen, Darley E., Logan, Ohio. Self-cleaning salt or pepper shaker or dispenser. 2,474,678, June 28.

Kitchen, Kenneth, Fostoria, Ohio. Combination loose-leaf binder and music stand table. 2,474,532, June 28.

Klittel, John J., St. Albans, assignor to Royal Typewriter Company, Inc., New York, N. Y. Power-operated typing mechanism for typewriters or like machines. 2,474,741, June 28.

Klein, Lawrence C., Hubbell, assignor to Lake Chemical Company, Calumet, Mich. Preparation of cuprous oxide. 2,474,533, June 28.

Kleinschmidt, Edward E., Miami Beach, Fla. Telegraphic communication system with automatic answer back and alarm signals. 2,474,257, June 28.

Kleppen, Emil, and I. B. Hansen, Minneapolis, Minn. Fish lure. 2,474,481, June 28.

Klug, Charles W., assignor to Stewart Warner Corporation, Chicago, Ill. Electric motor control proportioning system. 2,474,679, June 28.

Knost, Lloyd H., Webb City, Mo. Grounding shoe for welding machines. 2,474,534, June 28.

Koch, William J.: *See*—
Schmid, Carl J., and Koch.

Koehne, Frank J., Martinsville, N. J., assignor to Johns-Manville Corporation, New York, N. Y. Method and apparatus for size reduction and fiberizing of crude fibrous materials. 2,474,314, June 28.

Kohl, John C., Pittsburgh, and J. A. Desmone, Springdale, Pa., assignors to Pittsburgh Corning Corporation. Mounting of cellular glass slabs. 2,474,363, June 28.

Kramer, Paul H., assignor to Park Chemical Company, Detroit, Mich. Rectifying a neutral molten salt treating bath. 2,474,680, June 28.

Krannak, Steven J., St. Paul, Minn. Protective cot. 2,474,535, June 28.

Kreitmayr, Sylvester, Brooklyn, N. Y. Self-locking garment hanger. 2,474,429, June 28.

Kroeker, Edwin H.: *See*—
Neher, Harry T., Kroeker, and Crozall.

Kroon, Reinout P., Swarthmore, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Turbine apparatus. 2,474,258, June 28.

Krukonis, Alexander C., Auburn, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Bobbin retainer for weft replenishing mechanisms. 2,474,832, June 28.

Kuhn, Clarence W., Wauwatosa, assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Electromagnetic switch. 2,474,742, June 28.

Kürti, Alexander, Woodbury, assignor to The Autoyre Company, Incorporated, Oakville, Conn. Breech bolt with gauge members. 2,474,743, June 28.

La Forge, Louis H., Jr.: *See*—
Ellis, William C., La Forge, Jr., and White.

Lake Chemical Company, assignee: *See*—
Klein, Lawrence C.
Rowe, Percy J.

Lambert, Albert L., Narberth, and E. C. Franco-Ferreira, Jenkintown, assignor to Heintz Manufacturing Company, Philadelphia, Pa. Dispensing means. 2,474,744, June 28.

Landis, George G., South Euclid, and V. Peters, Lakewood, assignors to The Lincoln Electric Company, Cleveland, Ohio. Arc welding composition and making same. 2,474,787, June 28.

Landis & Gyr, A.-G., assignee: *See*—
Amsler, Robert.

Lane, Albert M., assignor to Vickers Incorporated, Detroit, Mich. Flow control circuit. 2,474,681, June 28.

Lang, Robert C.: *See*—
Cook, James M., and Lang.

Lankovski, Anatoly: *See*—
Graves, Michael.

Lapham, Edmund F., Jr., Norwell, Mass., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Coil supporting means. 2,474,259, June 28.

Latex Fiber Industries, Inc., assignee: *See*—
Owen, Allen F.

Laue, Charles E., Chicago, Ill. Valve. 2,474,430, June 28.

Lavietes, Abraham H., Shelton, Conn. Tobacco can elevator. 2,474,315, June 28.

Lee, Gerald L.: *See*—
Mahoney, Charles H., and Lee.

Leef, George R., East Orange, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Dielectric measuring apparatus and method. 2,474,260, June 28.

Leibe, Frank A., Quakertown, Pa., and B. B. Mahler, Newark, N. J., assignors to Federal Telephone and Radio Corporation, New York, N. Y. Modulator. 2,474,261, June 28.

Lewis, John B., Indianapolis, Ind. Minnow bucket. 2,474,745, June 28.

Lewis, Warren K., Jr., Baton Rouge, La., assignor to Standard Oil Development Company. Temperature control means. 2,474,583, June 28.

Lichtenwalner, Hart K.: *See*—
Lovell, Wheeler G., Miller, Mulligan, and Lichtenwalner.

Liebmann, Gerhard, assignor to Cathodeon Limited, Cambridge, England, Amplifier tube for high frequencies. 2,474,584, June 28.

Liebowitz, Benjamin, Lewisboro, N. Y. Composite steel plate. 2,474,682, June 28.

Lincoln Electric Company, The, assignee: *See*—
Landis, George G., and Peters.

Linde Air Products Company, The, assignee: *See*—
Keir, James M., and Clapp.

Linder, Victor F., assignor to A. T. O'Neil, Minneapolis, Minn. Bending brake with adjustable work stop and clamping means. 2,474,683, June 28.

Linderme, Edwin G., assignee: *See*—
Linderme, Emil.

Linderme, Emil, Shaker Heights, Ohio, assignor of one-third to E. M., one-third to E. G., and one-third to F. W. Linderme. Traction-gaining device. 2,474,262, June 28.

Linderme, Emil M., assignee: *See*—
Linderme, Emil.

Linderme, Frederick W., assignee: *See*—
Linderme, Emil.

Lipman, Maurice S., Hempstead, and W. W. Godon, Freeport, assignors to Republic Aviation Corporation, near Farmingdale, N. Y. Clamp. 2,474,431, June 28.

Litton, Charles V., Redwood City, Calif., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Cathode support. 2,474,263, June 28.

Lloyd, John, assignor to Sir W. G. Armstrong Whitworth Aircraft Limited, Coventry, England. Control of flying-wing aircraft. 2,474,585, June 28.

Lopez, Rufino, and B. Allen, Brownsville, Tex. Air cleaner. 2,474,746, June 28.

Lorain County Radio Corporation, The, assignee: *See*—
Heisner, Donald A.

Lorenz, Anton, Buffalo, N. Y. Adjustable seat structure. 2,474,264, June 28.

Lorenz, Anton, Buffalo, N. Y. Reclining article of furniture. 2,474,265, June 28.

Lovell, Wheeler G., V. A. Miller, M. J. Mulligan, and H. K. Lichtenwalner, assignors to General Motors Corporation, Detroit, Mich. Especially reactive lime and producing it. 2,474,207, June 28.

Lovick, John B., Glendale, assignor to Allied Appliance Co., Los Angeles, Calif. Testing instrument for machined parts. 2,474,482, June 28.

Lowe, Cuthbert J. J., Cheltenham, England. Hand operable indicating appliance. 2,474,432, June 28.

Lundegard, John E., Bremerton, Wash. Variable hydraulic pump or motor. 2,474,536, June 28.

Lundy, Alvin S.: *See*—
Schneible, Claude B., and Lundy.

Luttrell, James E., Burgess Store, Va. Trailer drawbar support. 2,474,483, June 28.

Lyon, Albert T.: *See*—
Maury, Alfred D., and Lyon.

Lyons, Harold, Washington, D. C. Step wave generator. 2,474,266, June 28.

Lysholm, Alf, Stockholm, Sweden, assignor, by mesne assignments, to J. C. Marble, New York, N. Y., L. M. Merrill, Westfield, N. J., and P. H. Batten, Racine, Wis., as trustees. Reversible hydraulic coupling. 2,474,586, June 28.

Machinefabriek Gebr. Stork & Co. N. V., assignee: *See*—
Busquet, Jan C.

Mack Manufacturing Corporation, assignee: *See*—
May, Walter M., and Burgess.
Pelan, John S.

MacLeod, James A., assignor to Sun Chemical Corporation, New York, N. Y. Position indicator for aircraft. 2,474,537, June 28.

Madrigueras, Enric, North Yonkers, N. Y. Combination screen and storm window. 2,474,747, June 28.

Mahler, Benjamin B.: *See*—
Leibe, Frank A., and Mahler.

Mahnke, Kurt, Alden, N. Y., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electric winch control system for alternating currents. 2,474,267, June 28.

Mahoney, Charles H., and G. L. Lee, Boulder City, Nev., assignors, by mesne assignments, to the United States of America as represented by the Secretary of the Navy. Alloying manganese with magnesium. 2,474,538, June 28.

Mann, John, assignor to Goulds Pumps, Inc., Seneca Falls, N. Y. Pumping apparatus. 2,474,539, June 28.

Marathon Paper Mills Company, assignee: *See*—
Farrell, Robert A., and Wagner.

Marbach, Frank G., assignor to Morrison Products, Inc., Cleveland, Ohio. Welding electrode. 2,474,788, June 28.

Marble, Jarvis C., assignee, trustee: *See*—
Boestad, Gustav K. W.
Lysholm, Alf.

Marchand, Nathan, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Radio-frequency in-phase indicator. 2,474,268, June 28.

Marchese, Vincent J., Brooklyn, N. Y. Electric lighting fixture. 2,474,484, June 28.

Marsh, Earle S., Temple City, assignor to The Fluor Corporation, Ltd., Los Angeles, Calif. Gas separator. 2,474,540, June 28.

Marshall, James F., Newton, Iowa. Automatic lathe chuck. 2,474,638, June 28.

Martines, Clement, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Power supply regulator system. 2,474,269, June 28.

Mason, Carl T., Little Rock, Ark. Surgical splint for small animals. 2,474,634, June 28.

Mason, Warren P., West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Magnetron oscillator. 2,474,485, June 28.

Master, Warren S., Rutherford, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Support for voltage regulators. 2,474,270, June 28.

Maury, Alfred D., Ilion, and A. T. Lyon, Mohawk, N. Y. Automatic fishing reel. 2,474,541, June 28.

May Walter M., Plainfield, N. J., and L. E. Burgess, Allentown, Pa., assignors to Mack Manufacturing Corporation, New York, N. Y. Two-speed governor. 2,474,316, June 28.

McCaughley, Michael J., Brooklyn, N. Y. Tooth cleaning device. 2,474,684, June 28.

McCloud, Robert A.: *See*—
Daum, John L., McCloud, and Bacon.

McCloud, Robert A., San Lorenzo, J. L. Daum, and T. P. Bacon, Oakland, Calif. Vulcanizer mold. 2,474,542, June 28.

McCollum, Henry J. De N., deceased, late of Chicago, Ill., by Thelma McCollum, executrix, assignor to Stewart-Warner Corporation, Chicago, Ill. Jet propulsion apparatus. 2,474,685, June 28.

McCollum, Thelma: *See*—
McCollum, Henry J. De N.

McKissick, William H., Tulsa, Okla. Snatch block. 2,474,433, June 28.

McLellan, E. W., Co., assignee: *See*—
McLellan, Roderick I.

McLellan, Roderick I., Colima, assignor to E. W. McLellan Co., San Francisco, Calif. Flower holder and box. 2,474,543, June 28.

McMullen, John C., assignor to The Carborundum Company, Niagara Falls, N. Y. Fused cast alumina refractory. 2,474,544, June 28.

McMurray, John C., Winthrop, Mass. Hydraulic brake fluid pumping apparatus. 2,474,748, June 28.

McNabney, Ralph: *See*—
Burkard, Perle N., and McNabney.

McPhail, Robert G., Newark, Ohio, assignor to Holophane Company, Inc., New York, N. Y. Light refracting and transmitting plate and lighting equipment using the same. 2,474,317, June 28.

Mealey, Robert V., assignee: *See*—
Wolfe, Paul.

Measurements Corporation, assignee: *See*—
van Beuren, John M.

Mellen, Alice M., assignee: *See*—
Evans, Russell T., and Clasen.

Menta, Frank E., Wallkill, N. Y. Combined support for shades, curtains, and drapes. 2,474,434, June 28.

Merck & Co., Inc., assignee: *See*—
Babson, Robert D.
Beutel, Ralph H., and Tishler.
Harmon, William S.
Peck, Robert L.

Merrell, Wm. S., Company, The, assignee: *See*—
Van Campen, Marcus G., Jr., and Tilford.

Merrill, Leslie M., assignee, trustee: *See*—
Boestad, Gustav K. W.
Lysholm, Alf.

Meyer, Harold F., Haddonfield, N. J. Protection of objects. 2,474,271, June 28.

Michel, Morris, assignor to Rothmoor Corporation, Chicago, Ill. Garment. 2,474,400, June 28.

Middleton, Alan C., Point Pleasant, N. J. Control mechanism for positioning a mast in alternate, predetermined positions. 2,474,486, June 28.

Miller, Donald L., Pine City, assignor to Bendix Aviation Corporation, Elmira Heights, N. Y. Backfire circuit breaker. 2,474,487, June 28.

Miller, Horace G.: *See*—
Wallace, Marcel, and Miller.

Miller, Theodore E., Detroit, Mich. Self-adjusting hydraulic brake mechanism. 2,474,749, June 28.

Miller, Verle A.: *See*—
Lovell, Wheeler G., Miller, Mulligan, and Lichtenwalner.

Minerva Wax Paper Company, assignee: *See*—
Gluck, Fred C.

Minneapolis-Honeywell Regulator Company, assignee: *See*—
Schoeppel, John F.
Sparrow, Hubert T.
Vollrath, Joseph P.

Modern Controls, Inc., assignee: *See*—
Haug, Eugene H.

Moeller, Jacob, Cincinnati, Ohio. Airplane toy. 2,474,750, June 28.

Molls, Charles P., New Hyde Park, N. Y. Knockdown stand or table. 2,474,318, June 28.

Monsanto Chemical Company, assignee: *See*—
Healy, John J., Jr., Taylor, and Abbiati.

Montgomery, Ora A., Miami, Okla. Fisherman's kit. 2,474,752, June 28.

Moore, Charles B.: *See*—
Swift, Gilbert, and Moore.

Moore, David W., Jr., New York, N. Y. Graphic facsimile toy. 2,474,545, June 28.

Moore, Edward J., executor, assignee: *See*—
Moore, Thomas F.

Moore, Robert C., assignor, by mesne assignments to Philco Corporation, Philadelphia, Pa. Vacuum tube amplifier. 2,474,435, June 28.

Moore, Thomas F., Morris Plains, N. J.; E. J. Moore and M. M. Dacey, executors of said T. F. Moore, deceased; assignors, by mesne assignments, to Moretrench Corporation, Rockaway, N. J. Automatic well point. 2,474,364, June 28.

Moore, Vincent H., Salinas, Calif. Concrete form board fastener. 2,474,587, June 28.

Moore, Wayne W., Chicago, Ill. Dental articulator. 2,474,488, June 28.

Morand, Emil, Jersey City, N. J. Foldable compartment box. 2,474,751, June 28.

Moretrench Corporation, assignee: *See*—
Moore, Thomas F.

Morey, Glen H., Terre Haute, assignor to Commercial Solvents Corporation, County of Vigo, Ind. Substituted 3-carbamyl-2-piperidones and preparing them. 2,474,589. June 28.

Morey, Glen H., assignor to Commercial Solvents Corporation, Terre Haute, Ind. Preparing 1,2,3,4,5,6-hexachlorocyclohexane. 2,474,590, June 28.

Morrell, Charles E.: *See*—
Bannon, Lewis A., and Morrell.

Morrell, Charles E., Westfield, and R. F. Robey, Cranford, N. J., assignors, by mesne assignments, to Standard Oil Development Company. Alcohol process. 2,474,588, June 28.

Morris, William T., Breckenridge, Tex. Safety lock for railroad spikes. 2,474,366, June 28.

Morrison Products, Inc., assignee: *See*—
Marbach, Frank G.

Mortensen, Robert W., assignor to Beloit Iron Works, Beloit, Wis. Rocker mounting for rotary bearings. 2,474,489, June 28.

Morton, Glenn R., Grand Island, Nebr. Spring clothespin. 2,474,753, June 28.

Moxley, Auben E., East Orange, assignor to Bel-Ray Company, Inc., Newark, N. J. Lubricator. 2,474,754, June 28.

Muller, Jacques, La Garenne Colombes, France; vested in the Attorney General of the United States. Coupling for piping. 2,474,319, June 28.

Mulligan, Maurice J.: *See*—
Lovell, Wheeler G., Miller, Mulligan, and Lichtenwalner.

Munn, Elvin R., St. Louis, Mo. Game block of non-magnetizable material having a magnetizable strip concealed in one end thereof. 2,474,365, June 28.

Murph, Donald H., Dallas, Tex. Nutcracker. 2,474,591, June 28.

Mustee, Bernard E., Cleveland, Ohio, assignor to E. L. Mustee and Sons, Inc. Fluid heater. 2,474,401, June 28.

Mustee, E. L., and Sons, Inc., assignee: *See*—
Mustee, Bernard E.

Myerson Tooth Corporation, assignee: *See*—
Kelly, Ernest B.

Nathan Manufacturing Company, assignee: *See*—
Folke, Bengt E., and Shepard.

Napier, Maurice A., Akron, Ohio. Ratchet means. 2,474,402, June 28.

National Tank Company, assignee: *See*—
Glasgow, Clarence O.

National Union Radio Corporation, assignee: *See*—
Skellett, Albert M.

Navy, United States of America as represented by the Secretary of the, assignee: *See*—
Burrell, Ellis.
Mahoney, Charles H., and Lee.

Neher, Harry T., Bristol, E. H. Kroeker, Cheltenham, and W. J. Crozall, Bryn Athyn, assignors to Rohm & Haas Company, Philadelphia, Pa. Allyl diglycolyl allyl glycolate. 2,474,686, June 28.

Newman, Charles: *See*—
Bechtold, Ira C., Stephens, and Newman.

Nichols, Harry J., New York, N. Y. Variable pitch propeller. 2,474,635, June 28.

Nicolet, Constant E., Westport, Conn., assignor, by mesne assignments, to Airkem, Inc., New York, N. Y. Wick-supporting device. 2,474,606, June 28.

Nill, Richard G., assignor to Fort Wayne Tool, Die and Engineering Company, Fort Wayne, Ind. Magnetic fixture for holding work to be ground. 2,474,800, June 28.

Nordlin, Henry G., East Orange, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Coaxial line termination. 2,474,272, June 28.

Norgorden, Oscar: *See*—
Dresser, Oscar C., Norgorden, Shunahan, and Shuler.

Oesterle, Henry, and R. A., Belleville, Ill. Vitrous enamel opacification and process. 2,474,636, June 28.

Oesterle, Robert A.: *See*—
Oesterle, Henry and R. A.

Ohlsson, Robert: *See*—
Early, Harold C., Dow, and Ohlsson.

Oil Center Tool Company, assignee: *See*—
Penick, Arthur J.

Olafson, Alvin O., St. Paul, Minn. Abrasive strip holder. 2,474,540, June 28.

Olson, Raymond O., Niles, Ill. Fabric reinforcement. 2,474,273, June 28.

O'Neil, Albert T., assignee: *See*—
Linder, Victor F.

O'Neill, George M., Salt Lake City, Utah. Ski press. 2,474,274, June 28.

Ostlund, Evert M., Montclair, N. J., and P. W. Sokoloff, Forest Hills, assignors to Federal Telephone and Radio Corporation, New York, N. Y. Pulse generating system. 2,474,275, June 28.

Owen, Allen F., assignor to Latex Fiber Industries, Inc., Beaver Falls, N. Y. Fibrous sheets formed from an aqueous suspension of a mixture of fibers and butadiene-styrene copolymer. 2,474,801, June 28.

Palmer, Frederick A., Wooster, Tex., assignor to Standard Oil Development Company. Polymerization of isobutylene with a diolefin. 2,474,502, June 28.

Pamphilon, Leon E., Yeadon, assignor to Airdesign, Incorporated, Upper Darby, Pa. Coil winding machine. 2,474,755, June 28.

Panoramic Laboratories: *See*—
Wallace, Marcel, and Miller.

Panoramic Radio Corporation, assignee: *See*—
Wallace, Marcel, and Miller.

Papciak, Walter J., Detroit, Mich. Honing tool for external cylindrical surfaces. 2,474,750, June 28.

Paragon Electric Company, assignee: *See*—
Platt, Edward V.

Parilla, Daniel, assignor of fifty per cent to S. D'Amico, Brooklyn, N. Y. Burglary or fire alarm system. 2,474,757, June 28.

Park Chemical Company, assignee: *See*—
Kramer, Paul H.

Parke, Davis & Company, assignee: *See*—
Doub, Leonard.

Parrish, William C., Park Ridge, assignor to Stewart-Warner Corporation, Chicago, Ill. Compact forced-air heater. 2,474,687, June 28.

Patch, Paul J., assignor to The Rocky Mountain Gas Equipment Company, Denver, Colo. Gas burner and pilot. 2,474,547, June 28.

"Patelhold" Patentverwertungs- & Electro-Holding A.-G., assignee: *See*—
Favre, Marcel G.
Guanella, Gustav.

Patner, Saul, assignee: *See*—
Selden, Herman L.

Payne, Arthur W., assignor to Bundy Tubing Company, Detroit, Mich. Apparatus for making sinuous bends in long workpieces. 2,474,276, June 28.

Pease, Reginald M., Jersey City, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Transmission controlling device for wave guides. 2,474,088, June 28.

Peck, Robert L., Plainfield, assignor to Merck & Co., Inc., Rahway, N. J. Complex salts of streptothricin. 2,474,758, June 28.

Pelan, John S., Plainfield, N. J., assignor to Mack Manufacturing Corporation, New York, N. Y. Wall thickness indicator. 2,474,320, June 28.

Pellé, Pierre, Arcueil, France. Start-stop regenerative repeater. 2,474,490, June 28.

Penick, Arthur J., assignor to Oil Center Tool Company, Houston, Tex. Packer for wells. 2,474,401, June 28.

Pensak, William, assignee: *See*—
Wines, Elmer J.

Perfect Circle Corporation, assignee: *See*—
Brenneke, Arthur M.

Perhaca, Leslie, North Hollywood, Calif. Variable-speed drive. 2,474,789, June 28.

Perrelli Freestone Machine, Inc., assignee: *See*—
Perrelli, Joseph, and J.

Perrelli, John: *See*—
Perrelli, Joseph and J.

Perrelli, Joseph and J., assignors to Perrelli Freestone Machine, Inc., Richmond, Calif. Apparatus for halving and pitting apricots. 2,474,492, June 28.

Pestyner, Philip, Jamaica, assignor to Ty-Master Corporation, New York, N. Y. Collapsible tie rack. 2,474,436, June 28.

Peters, Vladimir: *See*—
Landis, George G., and Peters.

Peterson, Colguit, Tampa, Fla. Mold for concrete steps. 2,474,321, June 28.

Philco Corporation, assignee: *See*—
Moore, Robert C.
Sunstein, David E.

Phillips, Harold P., assignor to Hastings Manufacturing Company, Hastings, Mich. Piston ring assembly and spacer therefor. 2,474,493, June 28.

Phillips Petroleum Company, assignee: *See*—
Clark, Alfred, and Sailors.

Pickles, Sidney B., Jackson Heights, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Transmission line. 2,474,277, June 28.

Pittman, Ralph R.: *See*—
Yonkers, Edward H., Jr., and Pittman.

Pitts, John E., Jr., Los Angeles, Calif. Automatic instantaneous electric water heater. 2,474,637, June 28.

Pittsburgh Corning Corporation, assignee: *See*—
Kohl, John C., and J. A. Desmone.

Pittsburgh Pipe Cleaner Company, assignee: *See*—
Robinson, Lawrence R. and K. I., and Berger.

Pittsburgh Plate Glass Company, assignee: *See*—
Eiterman, George E.

Plasmeti Corporation, assignee: *See*—
Zabel, William C. P., and Helfenbein.

Platt, Edward V., Manitowoc, assignor to Paragon Electric Company, Two Rivers, Wis. Time switch. 2,474,404, June 28.

Pollak, Harry, San Francisco, Calif. Belt purse. 2,474,495, June 28.

Polychrome Corporation, assignee: *See*—
Halpern, Gregory.

Poole, Foster M., Dallas, Tex. Gauge for external measurements of cylindrical bodies. 2,474,802, June 28.

Potter, Raymond I., Lorain, and H. Gillett, Hudson, assignors to The Standard Oil Company, Cleveland, Ohio. Internal-combustion engine conditioning compounds. 2,474,437, June 28.

Purdue Research Foundation, assignee: *See*—
Degering, Edward F., and Van Biema.

Putnam, Alvin A., St. Louis, Mo. Vertical shaft excavating apparatus. 2,474,803, June 28.

Putnam, Henry B., Muskegon Heights, Mich., assignor to Borg-Warner Corporation, Chicago, Ill. Multipoint spot welding mechanism. 2,474,593, June 28.

Quality Appliances, Inc., assignee: *See*—
Snyder, Leland H.

Quarrie, Eugene A., assignee: *See*—
Foerste, William.

Quinn, David H., U. S. Navy. Water filter carrying case. 2,474,322, June 28.

Radio Corporation of America, assignee: *See*—
Friend, Albert W.
Goddard, De Witt R.
Goldstine, Hallan E., and Voigt.
Story, Theodore H.
Wood, Elton J.
Young, John E.

Ramage, William D., Berkeley, Calif., assignor to the United States of America as represented by the Secretary of Agriculture. Treating hydrophilic colloids to avoid swelling during washing. 2,474,367, June 28.

Ramsaur, Walter R., assignor to The Garrett Corporation, Los Angeles, Calif. Oil cooler. 2,474,689, June 28.

Ranger, Richard H., U. S. Army, Newark, N. J. Frequency modulated oscillator control. 2,474,278, June 28.

Rankenburg, Gunther, Millville, Minn. Self-feeder attachment. 2,474,368, June 28.

Rattray, George, Mineola, assignor to Fairchild Camera and Instrument Corporation, Jamaica, N. Y. Camera for photographing objects moving relatively to the camera. 2,474,323, June 28.

Ransch, John T., and G. Towne, Danville, Ill. Combined electric fan and electric heater assembly. 2,474,594, June 28.

Ray, James L., Elm Grove, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Governor. 2,474,324, June 28.

Ray, William A., Los Angeles, Calif., assignor to General Controls Co. Follow-up servomotor. 2,474,279, June 28.

Ray, William A., Los Angeles, Calif., assignor to General Controls Co. Air circulation control system. 2,474,369, June 28.

Rayman, Lawrence, Toledo, Ohio. Syringe. 2,474,496, June 28.

Regents of the University of Michigan, assignee: *See*—
Blicke, Frederick F.

Reichinstein, David, Zurich, Switzerland. Arc lamp and its low-tension ignition. 2,474,403, June 28.

Reintjes, George P., Kansas City, Mo. Wall box for water tube boilers. 2,474,548, June 28.

Republic Aviation Corporation, assignee: *See*—
Lipman, Maurice S., and Godon.

Richardson, Max C., assignor to Iron Fireman Manufacturing Company, Portland, Oreg. Control for electric motors. 2,474,595, June 28.

Richeson, Sanford E., Brooklyn, N. Y. Combustion turbine. 2,474,404, June 28.

Riggs, Raymond O.: *See*—
Hook, Flavia E., and Riggs.

Riley Stoker Corporation, assignee: *See*—
Craig, Ollison.

Ritti, John W., Los Angeles, Calif. Sustained electric signal operating device. 2,474,405, June 28.

Robey, Richard F.: *See*—
Morrell, Charles E., and Robey.

Robinson, Kyle L.: *See*—
Robinson, Lawrence R. and K. I., and Berger.

Robinson, Lawrence R., Dormont, K. I. Robinson, Glenshaw, and E. O. Berger, Bellevue, assignors to Pittsburgh Pipe Cleaner Company, Pittsburgh, Pa. Flexible connector. 2,474,690, June 28.

Rocky Mountain Gas Equipment Company, The, assignee: *See*—
Patch, Paul J.

Rocla Limited, assignee: *See*—
Fitzpatrick, Frank L.

Rodgers, Thomas T., Milwaukee, Wis.; T. T. Rodgers, Jr., executor of the said T. T. Rogers, Sr., deceased. Aqueous lubricant. 2,474,325, June 28.

Rodgers, Thomas T., Jr., executor: *See*—
Rodgers, Thomas T.

Rodney Hunt Machine Co., assignee: *See*—
Belcher, Harold H.

Roehm, William A., Rockville Centre, assignor, by mesne assignments, to Virtu, Inc., Brooklyn, N. Y. Web coating apparatus. 2,474,691, June 28.

Rohm & Haas Company, assignee: *See*—
Neher, Harry T., Kroeker, and Croxall.

Rolph, Thomas W., Newark, Ohio, assignor to Holophane Company, Inc., New York, N. Y. Street lighting luminaire. 2,474,326, June 28.

Rolph, Thomas W., Newark, Ohio, assignor to Holophane Company, Inc., New York, N. Y. Street lighting luminaire. 2,474,327, June 28.

Rose, Michael E., assignee: *See*—
Wheelock, Raymond.

Rossman, Joseph, Washington, D. C., assignor to United States Gasket Company, Camden, N. J. Gasket centering means. 2,474,790, June 28.

Rossoff, Arthur L., Richmond Hill, assignor to Universal Electronic Laboratories, Inc., New York, N. Y. High-speed precision limit bridge arrangement and method. 2,474,692, June 28.

Rothfuchs, Alfred, Zurich, Switzerland. Junction box for electric lines. 2,474,328, June 28.

Rothmoor Corporation, assignee: *See*—
Michel, Morris.

Rothstein, Jerome, Belmar, N. J. Piezometric thermionic tube. 2,474,280, June 28.

Rowe, Percy J., Hubbell, assignor to Lake Chemical Company, Calumet, Mich. Production of cuprous hydroxide and cuprous oxide. 2,474,497, June 28.

Rowe, Robert G., Niagara Falls, N. Y. Magnetic field responsive device. 2,474,693, June 28.

Royal Typewriter Company, Inc., assignee: *See*—
Kittel, John J.

Ruiz, Ramon A., Havana, Cuba, assignor of sixty per cent to G. Glendice, Brooklyn, N. Y. Railroad spike. 2,474,281, June 28.

Rushforth, Paul W., Honolulu, Territory of Hawaii. Ash receiver. 2,474,371, June 28.

Russell, Stanley D., assignor to J. I. Case Company, Racine, Wis. Flywheel. 2,474,370, June 28.

Sailer, Rudolph J., Townley, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Top feed and alternating presser attachment for sewing machines. 2,474,282, June 28.

Sailors, Howard R.: *See*—
Clark, Alfred, and Sailors.

Salathiel, Richard A., Houston, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J. Drilling fluid for heaving shale. 2,474,329, June 28.

Salathiel, Richard A., Houston, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J. Aqueous base drilling fluid for heaving shale. 2,474,330, June 28.

Salminen, Ilmar F.: *See*—
Weissberger, Arnold, Salminen, and Vittum.

Salvin, Victor S.: *See*—
Seymour, George W., Salvin, and Jones.

Saner, George, Berwyn, assignor to Union Special Machine Company, Chicago, Ill. Sewing machine unit. 2,474,331, June 28.

Saulnier, Raymond, Paris, France. Retractable landing gear for aircraft. 2,474,694, June 28.

Schenau, Bernardus W. V.: *See*—
Haantjes, Johan, and Schenau.

Schmid, Carl J., New York, N. Y., and W. J. Koch, Midland Park, N. J., assignors to Julius Schmid, Inc., New York, N. Y. Testing electrode. 2,474,638, June 28.

Schmid, Julius, Inc., assignee: *See*—
Schmid, Carl J., and Koch.

Schmidt, Edwin L., Kew Gardens, assignor to The Teleregister Corporation, New York, N. Y. Communication and posting system. 2,474,438, June 28.

Schmith, Lester C., Sacramento, Calif. Buckle. 2,474,372, June 28.

Schmitz, Harry, Brooklyn, N. Y. Snow remover. 2,474,759, June 28.

Schneible, Claude B., and A. S. Lundy, Detroit, Mich., said Lundy assignor to said Schneible. Collecting and separating apparatus. 2,474,695, June 28.

Schneider, Arthur E.: *See*—
Atkisson, Minton S., and Schneider.

Schoeppel, John F., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Gyroscope. 2,474,549, June 28.

Schomburg, August, New York, N. Y. Desk and table combination. 2,474,696, June 28.

Schwab, Emil P., Mount Lebanon, Pa. Antiskid traction appliance for motor vehicle wheels. 2,474,696, June 28.

Schwabe, Harold C., Shawano, Wis. Fishing float. 2,474,498, June 28.

Schwarzbaum, Hartley D., New York, assignor to Bilt-Rite Baby Carriage Co., Inc., Brooklyn, N. Y. Antitipping device for baby carriages. 2,474,804, June 28.

Schwendner, Anthony F., Ridley Park, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Power plant control mechanism. 2,474,697, June 28.

Sciuto, Carl C., St. Louis, Mo. Spray nozzle. 2,474,332, June 28.

Scovill Manufacturing Company, assignee: *See*—
Spender, Donald L., and Butler.

Segal, Samuel, New York, N. Y., assignor to Wilson-Jones Co., Chicago, Ill. Loose-leaf post binder. 2,474,698, June 28.

Segesman, Louis E., Canton, assignor to The Hoover Company, North Canton, Ohio. Electric motor. 2,474,439, June 28.

Selden, Herman L., assignor to S. Patner, Chicago, Ill. Toy wagon. 2,474,373, June 28.

Seles Corporation of America, assignee: *See*—
Biaha, Emil.
Hess, Frederic O.

Senkus, Murray, assignor to Commercial Solvents Corporation, Terre Haute, Ind. Nitroalkyl substituted heterocyclic compounds and preparing them. 2,474,791, June 28.

Senkus, Murray, assignor to Commercial Solvents Corporation, Terre Haute, Ind. Polyamino alcohols and preparing them. 2,474,792, June 28.

Seymour, George W., and V. S. Salvin, Cumberland, and W. D. Jones, Cresaptown, Md., assignors to Celanese Corporation of America. Diphenylamine sulfonamide dyestuffs. 2,474,333, June 28.

Shanahan, Francis J.: *See*—
Dresser, Oscar C., Norgorden, Shanahan, and Shuler.

Shattuck, De Witt C., Velva, N. Dak. Hydraulic hayfork. 2,474,374, June 28.

Shearer, Howard E., and J. E. Van Nest, Swarthmore, Pa., assignors to American Viscose Corporation, Wilmington, Del. Shaped fabricated article. 2,474,375, June 28.

Shell Development Company, assignee: *See*—
De Nie, Willem L. J.
Smith, Albert E., and Beeck.

Shepard, Ralph H.: *See*—
Folke, Bengt E., and Shepard.

Shepheard, William L., Norfolk, Va. Toy ferry system. 2,474,376, June 28.

Shmidl, Albert J., Houston, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J. Producing maleic acid by oxidation of cyclohexane. 2,474,334, June 28.

Short, Brooks H., and H. L. Hartzell, Anderson, Ind., assignors to General Motors Corporation, Detroit, Mich. Ignition system. 2,474,550, June 28.

Shprentz, Isidore, New York, N. Y. Flint dispenser. 2,474,639, June 28.

Shuler, Carroll R.: *See*—
Dresser, Oscar C., Norgorden, Shanahan, and Shuler.

Shurtleff, George G., Panama City, Fla. Ratchet drive for tools. 2,474,377, June 28.

Schwarzowsky, Shimon, Tel Aviv, Palestine. Easy chair. 2,474,597, June 28.

Silbert, Sidney, New York, and H. Folb, Brooklyn, N. Y. Brassières. 2,474,699, June 28.

Simmon, Alfred, Jackson Heights, assignor to Simmon Brothers, Inc., Long Island City, N. Y. Camera view and range finder. 2,474,379, June 28.

Simmon, Alfred, Jackson Heights, assignor to Simmon Brothers, Inc., Long Island City, N. Y. Device for modifying electrical signals. 2,474,380, June 28.

Simmon, Alfred, Jackson Heights, and L. L. Welsglass, New York, assignors to Simmon Brothers, Inc., Long Island City, N. Y. Power-driven flash synchronizer for photographic shutters. 2,474,378, June 28.

Simmon Brothers, Inc., assignee: *See*—
Simmon, Alfred.
Simmon, Alfred, and Welsglass.

Simpkins, Isaac W., Charlotte, N. C. Wheel mounting in vehicles. 2,474,283, June 28.

Singer Manufacturing Company, The, assignee: *See*—
Sailer, Rudolph J.
Wood, Alfred R.

Skellett, Albert M., Madison, assignor to National Union Radio Corporation, Newark, N. J. Getter structure for electron discharge devices. 2,474,335, June 28.

Sladick, Frank, Sr., Solvay, N. Y. Concrete composition and production thereof. 2,474,381, June 28.

Slifkin, Sam C., Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. Diazotype sensitized papers having cellulose ether sizing. 2,414,700, June 28.

Smith, Air Reduction Company, assignor to Air Reduction Company, Incorporated, New York, N. Y. Method of and apparatus for welding. 2,474,789, June 28.

Smith, Albert E., and Beeck, Maarten O., assignors to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,335, June 28.

Smith, Albert E., assignor to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,336, June 28.

Smith, Albert E., and Beeck, Maarten O., assignors to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,337, June 28.

Smith, Albert E., assignor to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,338, June 28.

Smith, Albert E., and Beeck, Maarten O., assignors to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,339, June 28.

Smith, Albert E., assignor to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,340, June 28.

Smith, Albert E., and Beeck, Maarten O., assignors to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,341, June 28.

Smith, Albert E., assignor to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,342, June 28.

Smith, Albert E., and Beeck, Maarten O., assignors to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,343, June 28.

Smith, Albert E., assignor to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,344, June 28.

Smith, Albert E., and Beeck, Maarten O., assignors to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,345, June 28.

Smith, Albert E., assignor to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,346, June 28.

Smith, Albert E., and Beeck, Maarten O., assignors to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,347, June 28.

Smith, Albert E., assignor to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,348, June 28.

Smith, Albert E., and Beeck, Maarten O., assignors to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,349, June 28.

Smith, Albert E., assignor to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,350, June 28.

Smith, Albert E., and Beeck, Maarten O., assignors to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,351, June 28.

Smith, Albert E., assignor to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,352, June 28.

Smith, Albert E., and Beeck, Maarten O., assignors to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,353, June 28.

Smith, Albert E., assignor to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,354, June 28.

Smith, Albert E., and Beeck, Maarten O., assignors to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,355, June 28.

Smith, Albert E., assignor to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,356, June 28.

Smith, Albert E., and Beeck, Maarten O., assignors to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,357, June 28.

Smith, Albert E., assignor to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,358, June 28.

Smith, Albert E., and Beeck, Maarten O., assignors to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,359, June 28.

Smith, Albert E., assignor to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,360, June 28.

Smith, Albert E., and Beeck, Maarten O., assignors to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,361, June 28.

Smith, Albert E., assignor to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,362, June 28.

Smith, Albert E., and Beeck, Maarten O., assignors to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,363, June 28.

Smith, Albert E., assignor to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,364, June 28.

Smith, Albert E., and Beeck, Maarten O., assignors to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,365, June 28.

Smith, Albert E., assignor to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,366, June 28.

Smith, Albert E., and Beeck, Maarten O., assignors to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,367, June 28.

Smith, Albert E., assignor to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,368, June 28.

Smith, Albert E., and Beeck, Maarten O., assignors to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,369, June 28.

Smith, Albert E., assignor to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,370, June 28.

Smith, Albert E., and Beeck, Maarten O., assignors to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,371, June 28.

Smith, Albert E., assignor to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,372, June 28.

Smith, Albert E., and Beeck, Maarten O., assignors to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,373, June 28.

Smith, Albert E., assignor to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,374, June 28.

Smith, Albert E., and Beeck, Maarten O., assignors to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,375, June 28.

Smith, Albert E., assignor to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,376, June 28.

Smith, Albert E., and Beeck, Maarten O., assignors to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,377, June 28.

Smith, Albert E., assignor to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,378, June 28.

Smith, Albert E., and Beeck, Maarten O., assignors to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,379, June 28.

Smith, Albert E., assignor to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,380, June 28.

Smith, Albert E., and Beeck, Maarten O., assignors to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,381, June 28.

Smith, Albert E., assignor to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,382, June 28.

Smith, Albert E., and Beeck, Maarten O., assignors to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,383, June 28.

Smith, Albert E., assignor to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,384, June 28.

Smith, Albert E., and Beeck, Maarten O., assignors to Shell Development Company, San Francisco, Calif. Catalytic conversion of hydrocarbons. 2,474,385, June 28.

Smith, Guy L., Cumberland, Md. Tire guard. 2,474,284, June 28.

Smith, Luton B., and N. B. Smith, High Point, N. C. Bee comb foundation frame. 2,474,382, June 28.

Smith, Marvin A., Portland, Oreg. Curtain and drape rod support attachment. 2,474,551, June 28.

Smith, Nellie B.: *See*—
Smith, Luton B., and Nellie B.

Smith, William F., Brooklyn, assignor to International Standard Electric Corporation, New York, N. Y. Bank strip welding machine. 2,474,285, June 28.

Snyder, Leland H., assignor, by mesne assignments, to Quality Appliances, Inc., Chicago, Ill. Bubble fountain device. 2,474,286, June 28.

Societe de Usines Chimiques Rhone-Poulenc, assignee: *See*—
Durel, Pierre, and Dubost.

Societe Genevoise d'Instruments de Physique, assignee: *See*—
Turrettini, Fernand.

Societe: Les Fils de Peugeot Freres, assignee: *See*—
De la Source, Charles.

Sokoloff, Paul W.: *See*—
Ostlund, Evert M., and Sokoloff.

Southern Wood Preserving Company, assignee: *See*—
Vaughan, Joseph A., and Vinson.

Spackman, Thomas F., assignor to Stewart-Warner Corporation, Chicago, Ill. Heater burner, particularly fuel delivery and igniting means therefor. 2,474,702, June 28.

Sparrow, Hubert T., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Temperature control apparatus for cabins of aircraft. 2,474,441, June 28.

Spender, Donald L., Wolcott, and G. L. Butler, assignors to Scovill Manufacturing Company, Waterbury, Conn. Liquid dispensing device with bulb pump. 2,474,442, June 28.

Spoonhour, Charles L., assignor to Frick Company, Waynesboro, Pa. Multiple temperature refrigerating unit having air circulating means. 2,474,499, June 28.

Spoor, Theodorus A., Eindhoven, Netherlands, assignor, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Coil having a slidable core and establishing the ratio between the maximum and minimum inductance thereof. 2,474,761, June 28.

Southland Paper Converting Company, assignee: *See*—
Yount, Stanley G., and Halstead.

Standard Oil Company, The, assignee: *See*—
Potter, Raymond L., and Gillett.

Standard Oil Development Company, assignee: *See*—
Bannon, Lewis A.
Bannon, Lewis A., and Morrell.
Black, James F.
Brakeley, Paul W., Jr., and Young.
Davis, Richard M.
Eby, Lawrence.
Gidley, Philip T.
Howell, Lynn G.
Kearby, Kenneth K.
Lewis, Warren K., Jr.
Morrell, Charles E., and Robey.
Palmer, Frederick A.
Salathiel, Richard A.
Shmidl, Albert J.
Stone, Albert L.
Viles, Prentiss S., and Camp.
Wasson, Jones I., and Zimmer.
Young, David W., and Brakeley.

Stanley, Jack R., assignee: *See*—
Wheelock, Raymond.

Stapely, George H., South Haven, Mich., assignor to Everett Piano Company. Piano construction. 2,474,599, June 28.

Stearn, William T.: *See*—
Sutherland, Frederick G., and Stearn.

Stein, Frederick K., Rockford, Ill. High-low speed attachment for drill presses. 2,474,500, June 28.

Steincross, Gerald B., Long Beach, Calif. Voltage regulator. 2,474,287, June 28.

Steinmeyer, Frederick W., Oakland, Calif. Sectional hinged fold holder. 2,474,552, June 28.

Stender, John I.: *See*—
Stender, John L. and J. I.

Stender, John L., and J. I. Stender, Erie, Mich. Shunt control unit. 2,474,600, June 28.

Stephens, Foster M.: *See*—
Bechtold, Ira C., Stephens, and Newman.

Stephens, Foster M., assignor to The Fluor Corporation, Ltd., Los Angeles, Calif. Elimination of pulsations in gas lines. 2,474,563, June 28.

Stephens, Foster M., assignor to The Fluor Corporation, Ltd., Los Angeles, Calif. Gas line pulsation dampening system. 2,474,555, June 28.

Stephens, Foster M., Los Angeles, and C. F. Yates, North Hollywood, assignors to The Fluor Corporation, Ltd., Los Angeles, Calif. Apparatus for pulsation elimination in fluid streams. 2,474,554, June 28.

Stever, William, assignor to The Budd Company, Philadelphia, Pa. Clinch nut anvil with nut-positioning sleeve. 2,474,501, June 28.

Stewart Warner Corporation, assignee: *See*—
Klug, Charles W.
McCollum, Henry J. D.
Parrish, William C.
Spackman, Thomas F.
Williams, Lynn A., Jr.

Stone, Albert L., Palos Verdes Estates, Calif., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J. Column assembly, including pressure fluid motors for moving objects longitudinally and angularly. 2,474,336, June 28.

Stone, Albert L., Palos Verdes Estates, Calif. Pipe joint seal. 2,474,556, June 28.

Stoner, Eliot F.: *See*—
Wieden, Herbert J., Traphagen, and Stoner.

Story, Theodore H., Merchantville, N. J., assignor to Radio Corporation of America. Induction heating coil providing distribution of heating effect. 2,474,703, June 28.

Sturgis Products Company, The, assignee: *See*—
Bogema, Richard E.

Submarine Signal Company, assignee: *See*—
Beechlyn, John T.

Suchy, Charles T., London, England. Metallization of electrically nonconductive fabrics, fibrous materials, and porous materials. 2,474,502, June 28.

Suggate, Harold G.: *See*—
Kendall, John D., Suggate, and Wood.

Suhr, Albert H., Chicago, Ill. Weedless artificial fish bait. 2,474,383, June 28.

Sulzer Freres, Societe Anonyme, assignee: *See*—
Aue, Georg.

Sun Chemical Corporation, assignee: *See*—
MacLeod, James A.

Sundstrand Machine Tool Co., assignee: *See*—
Wahlmark, Gunnar A.

Sundt, Edward V., Arcadia, Calif. Circuit breaker. 2,474,762, June 28.

Sunstein, David E., Elkins Park, assignor to Philco Corporation, Philadelphia, Pa. High-frequency radiant energy absorbing device. 2,474,384, June 28.

Sutherland, Frederick F., and W. T. Stearn, Cumberland, Md., assignor to Celanese Corporation of America. Transport. 2,474,837, June 28.

Swift, Gilbert, Tulsa, Okla., and C. B. Moore, Elberon, N. J. Octantal error calculator. 2,474,288, June 28.

Tago, Catalino G., Brooklyn, N. Y. Jig for swivel links. 2,474,289, June 28.

Tama, Mario, Morrisville, Pa., and J. L. Hoff, Pennington, assignors to Ajax Engineering Corporation, Trenton, N. J. Drum type induction furnace. 2,474,443, June 28.

Taylor, Ambrose G., Birmingham, England, assignor to The Dow Corning Corporation, Midland, Mich. Preparation of organosilicon compounds. 2,474,444, June 28.

Taylor Instrument Companies, assignee: *See*—
Wels, William C.

Taylor, Maurice H.: *See*—
Healy, John J., Jr., Taylor, and Abbiati.

Teleregister Corporation, The, assignee: *See*—
Schmidt, Edwin L.

Templeton, Fred H., Portland, Oreg., assignor to Templeton Harvester, Inc., Oakland, Calif. Combine harvester. 2,474,557, June 28.

Templeton Harvester, Inc., assignee: *See*—
Templeton, Fred H.

Terry, Victor J., and R. Kelly, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Phase failure indicating device for polyphase systems. 2,474,290, June 28.

Textile Appliance Corporation, assignee: *See*—
Hill, Earl G.

Thayer, Mary E., assignor to Dow Corning Corporation, Midland, Mich. Rendering materials water-repellent. 2,474,704, June 28.

Tholson, Karl E., Akarp, Sweden. Manufacture of turned slippers or similar footgear. 2,474,558, June 28.

Thomas, Charles A., Fort Wayne, Ind., assignor to General Electric Company. Brush mechanism. 2,474,601, June 28.

Thomas, Halford R., Alhambra, Calif. Napkin holder. 2,474,763, June 28.

Tilford, Charles H.: *See*—
Van Campen, Marcus G., Jr., and Tilford.

Tillett, Stanley H., Wanstead, London, and B. D. Feild, Romford, assignors to Tillett's Cotton Marking Machines Limited, London, England. Apparatus for reproducing characters and the like. 2,474,400, June 28.

Tillett's Cotton Marking Machines Limited, assignee: *See*—
Tillett, Stanley H., and Feild.

Tishler, Max: *See*—
Beutel, Ralph H., and Tishler.

Todd, William L., Fort Thomas, Ky., and E. E. Greenberg, Cincinnati, Ohio, assignors to The Kelley-Koett Manufacturing Co., Covington, Ky. Polarity indicator plug. 2,474,407, June 28.

Toulon, Pierre M. G., Paris, France. Electronic commutation system and its application, especially to the scanning in television. 2,474,338, June 28.

Towne, George: *See*—
Rausch, John T., and Towne.

Townsend, Samuel P., Maplewood, N. J. Two-speed lawn mower. 2,474,764, June 28.

Traphagen, Peter C.: *See*—
Wieden, Herbert J., Traphagen, and Stoner.

Trig Corporation, assignee: *See*—
Graham, Philip J.

Troy Sunshade Company, The, assignee: *See*—
Daniel, Walter.

Tryon, Philip F., assignor to Commercial Solvents Corporation, Terre Haute, Ind. Plasticized elastomer compositions containing n-(hydroxyalkyl)-amides and their fatty acid esters. 2,474,793, June 28.

Turner, Richard G., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Bobbin tip support means for weft replenishing looms. 2,474,641, June 28.

Turrettini, Fernand, Bellevue-Geneva, assignor to Societe Genevoise d'Instruments de Physique, Geneva, Switzerland. Length measuring machine having lens and reflector means. 2,474,602, June 28.

Ty-Master Corporation, assignee: *See*—
Pestyner, Philip.

Union Special Machine Company, assignee: *See*—
Sauer, George.

Union Steel Products Company, assignee: *See*—
Bitney, Dewey H.

United Aircraft Corporation, assignee: *See*—
Block, Emil V.

United Aircraft Manufacturing Corporation, assignee: *See*—
Watter, Michael.
Watter, Michael, and Doherty.

United Shoe Machinery Corporation, assignee: *See*—
Fossa, Joseph.

United States Atomic Energy Commission, United States of America as represented by the, assignee: *See*—
Baker, William R.

United States Gasket Company, assignee: *See*—
Rossman, Joseph.

Universal Electronic Laboratories, Inc., assignee: *See*—
Rossoff, Arthur L.

Vacuum Concrete Inc., assignee: *See*—
Billner, Karl P.

Vale, Jaiva, Birmingham, Ala. Typewriter support. 2,474,385, June 28.

Van Beuren, John M., Morristown, assignor to Measurements Corporation, Boonton, N. J. Attenuator. 2,474,794, June 28.

Van Beuren, John M., Morristown, assignor to Measurements Corporation, Boonton, N. J. Attenuator for high-frequency pickup devices. 2,474,795, June 28.

Van Biema, Gerhard: *See*—
Degering, Edward F., and Van Biema.

Van Campen, Marcus G., Jr., Wyoming, and C. H. Tilford, Silverton, assignors to The Wm. S. Merrell Company, Cincinnati, Ohio. Alkylaminoalkyl esters of alicyclylalicyclic carboxylic acids. 2,474,796, June 28.

Van Degrift, Thomas C., assignor to General Motors Corporation, Detroit, Mich. Torsional vibration exhibiting means. 2,474,408, June 28.

Van Nest, John E.: *See*—
Shearer, Howard E., and Van Nest.

Vaughan, Joseph A., and J. C. Vinson, assignors to Southern Wood Preserving Company, Atlanta, Ga. Method of and apparatus for partially dehydrating and cleansing oily wood preservatives. 2,474,705, June 28.

Vaughn, Bernard G., and W. V. Feil, Zanesville, Ohio, assignors to Armco Steel Corporation. Pack opening and sheet receiving means. 2,474,765, June 28.

Vickers-Armstrongs Limited, assignee: *See*—
Ingoldby, Maurice K.

Vickers Incorporated, assignee: *See*—
Lane, Albert M.

Viles, Prentiss S., and E. Q. Camp, Goose Creek, Tex., assignors, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J. Inhibition of corrosion in wells. 2,474,603, June 28.

Vinson, Joseph C.: *See*—
Vaughan, Joseph A., and Vinson.

Virtu, Inc., assignee: *See*—
Roehm, William A.

Vittum, Paul W.: *See*—
Weissberger, Arnold, Salminen, and Vittum.

Voigt, Oswin F.: *See*—
Guidetine, Hallan E., and Voigt.

Volkmann, John, Cambridge, Mass., assignor to the United States of America as represented by the Secretary of War. Headband and earphone mounting. 2,474,386, June 28.

Vollrath, Joseph P., Glenside, Pa., assignor, by mesne assignments, to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Control instrument. 2,474,208, June 28.

Vuts, Wilhelm, Coldwater, Ohio, assignor, by mesne assignments, to Avco Manufacturing Corporation. Side-draft stabilizer mechanism. 2,474,445, June 28.

Wagner, Charley L.: *See*—
Farrell, Robert A., and Wagner.

Waggoner, Alvin G., Philadelphia, and W. B. Brooks, Pittsburgh, Pa. Alloy steel. 2,474,766, June 28.

Wahlberg, Eric C., Stamford, assignor to Electrolux Corporation, Old Greenwich, Conn. Electric motor switching mechanism. 2,474,707, June 28.

Wahlmark, Gunnar A., assignor to Sundstrand Machine Tool Co., Rockford, Ill. Hydraulic transmission. 2,474,706, June 28.

Waldorf Paper Products Company, assignee: *See*—
Guyer, Reynolds.

Walker, William R., Baltimore, Md. Composition floor covering of resilient pliable coated material. 2,474,767, June 28.

Wallace, Jeffrey J., Amite, La., assignor to Gullett Gin Company. System for the preginning of cotton. 2,474,642, June 28.

Wallace, Marcel, New York, N. Y., and H. G. Miller, Belleville, N. J., assignors, by mesne assignments, of one-half to M. Wallace, doing business as Panoramic Laboratories, and one-half to Panoramic Radio Corporation, New York, N. Y. Vibrating reactance panoramic radio receiver. 2,474,387, June 28.

Walters, Charles A., Portsmouth, Ohio. Circular burnisher planer and molding head. 2,474,559, June 28.

Wamnes, Leonard B.: *See*—
Wheeler, William H., and Wamnes.

War, United States of America, as represented by the Secretary of, assignee: *See*—
Meyer, Harold F.
Volkmann, John.

Ward, Wilfred H., and C. H. Binkley, Berkeley, Calif., assignors to the United States of America as represented by the Secretary of Agriculture. Keratin derivatives and preparation thereof. 2,474,339, June 28.

Warden, Alva F., Gary, and L. A. Harry, Crown Point, Ind. Antiskid device. 2,474,291, June 28.

Warner, Samuel W., Newark, N. J. Floating electrode. 2,474,340, June 28.

Warren, Arthur E., Des Moines, Iowa. Quarter boot for horses. 2,474,440, June 28.

Warren, Henry E., Ashland, Mass. Repulsion synchronous motor. 2,474,797, June 28.

Wasserman, Arthur A., Boston, assignor of one-half to L. Cohen, Quincy, Mass. Doll stroller. 2,474,388, June 28.

Wasson, Jones I., and J. C. Zimmer, Union, N. J., assignors to Standard Oil Development Company. Rust-preventing compounds. 2,474,604, June 28.

Waterval, William, Brooklyn, N. Y. Propeller. 2,474,562, June 28.

Watter, Michael, Hartford, Conn., assignor to United Aircraft Manufacturing Corporation. Flexible gun mount for aircraft. 2,474,560, June 28.

Watter, Michael, New York, N. Y., and H. W. Doherty, East Hartford, Conn., assignors to United Aircraft Manufacturing Corporation. Flexible gun mount for aircraft. 2,474,561, June 28.

Webb, Clarence D., St. Clair Shores, Mich., assignor to Carboloy Company, Inc. Brazing cemented carbides to steel. 2,474,643, June 28.

Webster Industries, Inc., assignee: *See*—
Henne, Julius A.

Weeks, Norman O., Inglewood, Calif. Valve gauge. 2,474,294, June 28.

Weidner, Charles L., New Brunswick, and L. W. Eger, Perth Amboy, N. J., assignors to Industrial Tape Corporation. Adhesive tape for laminating. 2,474,292, June 28.

Wels, William C., assignor to Taylor Instrument Companies, Rochester, N. Y. Seal for filler tubes. 2,474,563, June 28.

Welsglass, Louis L.: *See*—
Simmon, Alfred, and Welsglass.

Weissberger, Arnold, I. F. Salminen, and P. W. Vittum, assignors to Eastman Kodak Company, Rochester, N. Y. 1-naphthol-1-2-carboxylic acid amide couplers for color photography. 2,474,293, June 28.

Wellworth Piston Rings Limited, assignee: *See*—
Howlett, John W., and Woolcott.

West, Carl H., St. Clairsville, Ohio, assignor to Blaw-Knox Company, Pittsburgh, Pa. Heating ingots. 2,474,504, June 28.

West, Carl H., St. Clairsville, Ohio, assignor to Blaw-Knox Company, Pittsburgh, Pa. Furnace cover operating mechanism. 2,474,505, June 28.

Westin, Daniel B., West Hartford, assignor to Hartford-Empire Company, Hartford, Conn. Apparatus for forming glass articles. 2,474,708, June 28.

Westinghouse Electric Corporation, assignee: *See*—
Hague, Floyd T.
Kroon, Reinout P.
Mahnke, Kurt.
Schwendner, Anthony F.

Wheel Aligning Necessities, Inc., assignee: *See*—
Castiglia, Biagis.
Wheeler, Harold A., Great Neck, N. Y., assignor, by mesne assignments, to Haseltine Research, Inc., Chicago, Ill. Ultra-short-wave signal-translating device. 2,474,608, June 28.
Wheeler, Stephen P., Norristown, Pa. Screw driver. 2,474,295, June 28.
Wheeler, William H., New York, N. Y., and L. B. Wamnes, Aberdeen, Miss., assignors to Airkem, Inc., New York, N. Y. Liquid diffuser. 2,474,605, June 28.
Wheeler, William H., New York, and L. B. Wamnes, White Plains, assignors to Airkem, Inc., New York, N. Y. Liquid diffuser. 2,474,607, June 28.
Wheeling Steel Corporation, assignee: *See*—
Cross, Leonard W.
Wheelock, Raymond, assignor to J. R. Stanley and M. E. Rose, Los Angeles, Calif. Child's educational toy. 2,474,447, June 28.
White, Addison H.: *See*—
Ellis, William C., and La Forge, Jr., and White.
White, Harry B., Canton, assignor to The Hoover Company, North Canton, Ohio. Semiautomatic nozzle adjustment for suction cleaners. 2,474,448, June 28.
White Laboratories, Inc., assignee: *See*—
Breivogel, Philip J.
Whitworth, W. G. Armstrong, Sir., Aircraft Limited, assignee: *See*—
Lloyd, John.
Whyte, John, Chicago, Ill., assignor, by mesne assignments, to Helene Curtis Industries, Inc. Expandable curling rod. 2,474,449, June 28.
Wieden, Herbert J., Los Angeles, P. C. Traphagen, Pasadena, and E. F. Stoner, Los Angeles, Calif., assignors, by mesne assignments, to General American-Duryea Corporation, Chicago, Ill. Convertible ice bunker. 2,474,563, June 28.
Wildman Mfg. Co., assignee: *See*—
Howle, Kenneth.
Williams, Lynn A., Jr., Northfield, assignor to Stewart-Warner Corporation, Chicago, Ill. Heating system. 2,474,709, June 28.
Williamson, James L., assignor to The Fellows Gear Shaper Company, Springfield, Vt. Method and machine for generating splines and the like. 2,474,209, June 28.
Wilson-Jones Co., assignee: *See*—
Segal, Samuel.
Wiltsee, Duane, Ann Arbor, Mich. Towing device for trailers. 2,474,290, June 28.
Wince, Vearl S.: *See*—
Franck, Kurt, and Wince.
Wince, Vearl S., Newark, Ohio, assignor to Holophane Company, Inc., New York, N. Y. Surface attached fluorescent lighting luminaire. 2,474,341, June 28.
Wines, Elmer J., South Gate, assignor to W. Pensak, Los Angeles, Calif. Cushion or mattress unit. 2,474,768, June 28.
Wing, Russell T., Excelsior, Minn. Fountain pen. 2,474,389, June 28.
Wolf, Allen C., Atlanta, Ga., assignor of one-third to A. I. Jackson, Whitmire, S. C., and one-third to A. J. Ingrom, Atlanta, Ga. Safety knife. 2,474,609, June 28.
Wolf, Paul A.: *See*—
Coleman, Gerald H., and Wolf.
Wolfe, Paul, assignor of one-half to R. V. Mealey, St. Paul, Minn. Play hat. 2,474,507, June 28.
Wood, Alfred E., Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Thread-trimming and pull-off mechanism for sewing machines. 2,474,710, June 28.
Wood Conversion Company, assignee: *See*—
Heritage, Clark C.
Wood, Elton J., Hopewell, N. J., assignor to Radio Corporation of America. Making phosphor materials. 2,474,506, June 28.
Wood, Eric W., assignee: *See*—
Smith, George W., Jr.
Wood, Henry W.: *See*—
Kendall, John D., Suggate, and Wood.
Woodruff, Francis J., Detroit, Mich. Folding table with paired legs. 2,474,450, June 28.
Woolcott, Arthur J.: *See*—
Howlett, John W., and Woolcott.
Wunsch, Elton P., Providence, R. I. Quantitative deceleration indicator. 2,474,610, June 28.
Wyandotte Chemicals Corporation, assignee: *See*—
Burkard, Perle N., and McNabney.
Wyer, John M., Perton, Pattingham, near Wolverhampton, England. Suction-operated chuck. 2,474,608, June 28.
Wylie, Thomas, Twickenham, England. Mounting of fan units in ventilating shafts. 2,474,611, June 28.
Yates, Cecil F.: *See*—
Stephens, Foaster M., and Yates.
Yonkers, Edward H., Jr., Chicago, Ill., and R. R. Pittman, Pine Bluff, Ark. Protective system for electric lines. 2,474,711, June 28.
Young, David W.: *See*—
Brakeley, Paul W., Jr., and Young.
Young, David W., Roselle, and P. W. Brakeley, Jr., Plainfield, N. J., assignors to Standard Oil Development Company. Hydrocarbon oil compositions. 2,474,342, June 28.
Young, John E., Merchantville, N. J., assignor to Radio Corporation of America. High-frequency circuits. 2,474,769, June 28.
Young, L. A., Spring & Wire Corporation, assignee: *See*—
Justice, Jesse L.
Young, Norman H., Jr., Jackson Heights, assignor to Federal Telephone & Radio Corporation, New York, N. Y. Combination television receiver and picture projector. 2,474,297, June 28.
Yount, Stanley G., Los Angeles, and P. R. Halstead, Compton, assignors to Southland Paper Converting Company, Los Angeles, Calif. Bag and making the same. 2,474,770, June 28.
Zabel, William C. P., and R. C. Helfenbein, assignors to Plasmetl Corporation, Chicago, Ill. Culinary utensil. 2,474,451, June 28.
Zeidler, Reinhold C., Detroit, Mich., assignor to Borg-Warner Corporation, Chicago, Ill. Fluid wheel. 2,474,208, June 28.
Zimmer, John C.: *See*—
Wasson, Jones I., and Zimmer.
Zoromskis, Stanley M., Kenosha, Wis. Piston for high-compression engines. 2,474,564, June 28.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 28TH DAY OF JUNE, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Spoon, shovel, or the like implement with a pusher member. A. W. Tanner. 23,130, June 28.
Tape dispenser. J. A. Borden. 23,129, June 28.
Tuned microwave wattmeter. H. E. Webber. 23,131. June 28.

LIST OF PLANT INVENTIONS

Juniper tree. S. Wilmore. 848. June 28.
Polyantha rose plant. C. G. Duebraen. 851, June 28.
Rose plant. J. D. Brownell. 849, June 28.
Rose plant. A. Krebs. 850, June 28.

LIST OF DESIGN INVENTIONS

Airplane. E. H. Heinemann and L. J. Devlin. 154,273, June 28.
Ash tray or similar article. J. J. McCabe. 154,295, June 28.
Badge or similar article. F. Brook and S. Wager. 154,236–9, June 28.
Ball, Rubber play. J. M. Gapstur and R. E. Long. 154,259–60, June 28.
Bottle. R. Estrin. 154,257, June 28.
Bracket, Wall. H. P. Sharits. 154,336, June 28.
Brooch or similar article. A. Katz. 154,281, June 28.
Brooch or similar article. A. Katz. 154,283–5, June 28.
Brooch or similar article. A. Philippe. 154,306–7, June 28.
Brooch or similar article, Separable. A. Katz. 154,279, June 28.
Cabinet, Ironing. G. E. Kennedy. 154,288, June 28.
Candelabrum. G. R. Banker. 154,231, June 28.
Case or the like, Hand luggage. C. Doppelt. 154,247, June 28.
Casing head for weighing scales or similar article. G. D. Barok. 154,232, June 28.
Chain for a bracelet or similar article, Link. M. Chernow. 154,240, June 28.
Coin or token device for automobiles, Toll. A. Zitenfeld and J. Weil. 154,353–4, June 28.
Container, Perfume. W. Appleby. 154,228, June 28.
Copying apparatus, Document. A. E. Schubert, T. G. Clement, and J. F. Egan. 154,332, June 28.
Cutter, Cookie. S. W. and R. C. Price. 154,309–21, June 28.
Dispenser, Beverage. J. Levin. 154,291, June 28.
Dispensing machine. H. T. Roberts. 154,325, June 28.
Display box, Perfume. E. N. Graham. 154,260, June 28.
Display sign. J. Morgan. 154,299, June 28.
Display stand. F. Van Cleef. 154,350, June 28.
Fabric or similar article, Textile. M. R. Hamre. 154,267–9, June 28.
Fabric, Printed. B. Eckstein. 154,250, June 28.
Fabric, Textile. H. Horn. 154,275, June 28.
Fabric, Textile. D. Stapler. 154,344, June 28.
Finding for jewelry. A. Katz. 154,282, June 28.
Fishing reel. O. W. Pies. 154,308, June 28.
Fixture, Lighting. N. E. Palmquist. 154,302, June 28.
Flashlight or similar article, Wrist. S. Schwartz. 154,333, June 28.
Flask. M. Goldberg. 154,263, June 28.
Floor light for drive-in theatres or the like, Combination ramp identification and driveway. G. P. Heller. 154,274, June 28.
Floor, Tile, and wall covering. J. E. Ryan. 154,328, June 28.
Football game toy. S. L. Beder. 154,235, June 28.
Frame or similar article, Picture. G. D'Angelo. 154,244, June 28.
Front for a goggle frame. N. T. Baldanza. 154,230, June 28.
Grinder. H. H. Crawford. 154,243, June 28.
Guard for child's chair. J. G. Helm. 154,271, June 28.
Handbag and spectacle holder, Combined. A. R. Schiff. 154,329, June 28.
Handle, Nonrolling torque tool. H. B. Roysher. 154,326, June 28.
Hanger, Garment. W. B. Crane and M. Treiman. 154,242, June 28.
Holder and dispenser, Combined cigarette. M. J. Schipper. 154,330, June 28.
Holder for brooms or the like. C. L. Hawn. 154,270, June 28.
Holder for condiment containers. J. Kauffman and R. V. Smith. 154,287, June 28.
Humidor and pipe tray, Combination tobacco. J. Gottlieb. 154,265, June 28.
Iron, Electric. C. Karstadt. 154,278, June 28.
Lamp. J. F. Davidson. 154,245, June 28.
Lamp, Hurricane. A. E. Frontier. 154,258, June 28.
Lamp, Pin-up. T. J. Smith. 154,338, June 28.
Lamp, Table. S. Wetterhahn. 154,352, June 28.
Lantern, Projection. C. F. Dutton. 154,249, June 28.
Lawn mower. R. H. Ensign. 154,256, June 28.
Lighter, Table. H. Negbaur. 154,301, June 28.
Mailbox. A. J. Batzler. 154,224, June 28.
Memorandum pad or similar article. N. Marlow. 154,294, June 28.
Nail file. J. M. Alvizus. 154,227, June 28.
Necklace or similar article. A. Philippe. 154,304–5, June 28.
Negligee. V. Giovagnoni. 154,262, June 28.
Ornament, Automobile hood. A. R. Russell. 154,327, June 28.
Piano. W. Millington and W. M. Day. 154,296, June 28.
Pin clip or similar article. A. Katz. 154,280, June 28.
Pitcher. E. S. Tupper. 154,348, June 28.
Plate or the like. H. A. Silverman. 154,337, June 28.
Polishing device, Toe nail. P. Reid. 154,324, June 28.
Rack, Cigarette package. N. E. Durbin. 154,248, June 28.
Register, Autographic. R. Katz. 154,286, June 28.
Register, Sales meter. C. F. Ramsay. 154,322, June 28.
Regulator or similar article, Carbon pile. E. R. Davis. 154,246, June 28.
Rewinding device for bandage material. C. Cramer. 154,241, June 28.
Ring. A. D. Bastien. 154,233, June 28.
Shoe or similar article, Lady's. D. E. Levin. 154,290, June 28.
Spoon or other article of flatware. A. Litvin. 154,292, June 28.
Stand of drawers. P. G. Goldman. 154,264, June 28.
Stand or similar article, Calendar. C. N. Montanye. 154,298, June 28.
Stand, Silverware polishing. A. S. Seager. 154,334, June 28.
Stove, Heating. H. G. Lankford, Jr. 154,280, June 28.
Support, Radial saw. M. V. Tracy. 154,347, June 28.
Sweater or similar article. B. Ehrenreich. 154,251–4, June 28.
Sweeper, Carpet. T. M. Mock and H. H. Weber. 154,297, June 28.
Swing or similar article. S. E. Jones. 154,270, June 28.
Table top, Game. M. M. Warner. 154,351, June 28.
Teeter, Child's. J. H. Reed. 154,323, June 28.
Toe protector and metatarsal support, Combined. L. Karlen. 154,277, June 28.

Tongs. E. K. Sechrist and D. T. Offord. 154,335, June 28.
Tool, Brake adjusting. W. F. Schnitger and E. C. Southall. 154,331, June 28.
Tool, Garden. G. Pavlinetz. 154,303, June 28.
Toothbrush, container and holder, Combined. W. B. England. 154,255, June 28.
Toy article-dispensing device. J. Markoe. 154,293, June 28.
Tray, Enema. V. C. Thompson. 154,346, June 28.
Tray for child's chair. J. G. Helm. 154,272, June 28.
Tray or similar article, Letter. B. M. Morris. 154,300, June 28.
Tub or similar article. W. E. Ackermann. 154,220, June 28.
Typewriter. S. A. Thompson. 154,345, June 28.
Valise or similar article. R. H. Arbib. 154,229, June 28.
Valve, Liquid dispensing. B. B. Gilmore. 154,261, June 28.
Vehicle, Juvenile. W. I. Smith. 154,339–43, June 28.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 28TH DAY OF JUNE, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrasive strip holder. A. G. Olafson. 2,474,546, June 28.
Absorber and stabilizer, Shock. C. H. Dolan, II. 2,474,471, June 28.
Absorbing device, High-frequency radiant energy. D. E. Sunstein. 2,474,384, June 28.
Air cleaner. R. Lopez and B. Allen. 2,474,746, June 28.
Air duct control. K. L. Babcock. 2,474,455, June 28.
Alarm system, Burglary or fire. D. Parilla. 2,474,757 June 28.
Alcohol process. C. E. Morrell and R. F. Robey. 2,474,588, June 28.
Alkylaminoalkyl esters of alicyclyl-alicyclic carboxylic acids. M. G. Van Campen, Jr., and C. H. Tilford. 2,474,796, June 28.
Allyl diglycolyl allyl glycolate. H. T. Neher, E. H. Kroeker, and W. J. Croxall. 2,474,686, June 28.
Altitude control. R. L. Divoll. 2,474,618, June 28.
Amplifier, Vacuum tube. R. C. Moore. 2,474,435, June 28.
Amplitude modulated time modulated pulse system. D. D. Grieg. 2,474,244, June 28.
Antenna, Adjustable. C. K. Gieringer. 2,474,242, June 28.
Antenna, Single null loop. M. Y. Eck and J. J. Hodapp. 2,474,238, June 28.
Antenna system. G. P. Kearse. 2,474,480, June 28.
Antiskid device. A. F. Warden and L. A. Harry. 2,474,291, June 28.
Antitipping device for baby carriages. H. D. Schwarzbaum. 2,474,804, June 28.
Anvil with nut-positioning sleeve, Clinch nut. W. Stever. 2,474,501, June 28.
Apparatus for decarburizing steel. G. V. Slottman. 2,474,701, June 28.
Apparatus for forming glass articles. D. B. Westin. 2,474,708, June 28.
Apparatus for halving and pitting apricots. Joseph and J. Perrelli. 2,474,492, June 28.
Apparatus for heating tires. J. L. Daum, R. A. McCloud, and T. P. Bacon. 2,474,517, June 28.
Apparatus for making sinuous bends in long workpieces. A. W. Payne. 2,474,276, June 28.
Apparatus for reproducing characters and the like. S. H. Tillett and B. D. Feild. 2,474,406, June 28.
Appliance, Hand operable indicating. C. J. J. Lowe. 2,474,432, June 28.
Applicator for yarns, threads, and the like, Wax. M. B. Coleman and J. R. Bennington. 2,474,346, June 28.
Arc welding composition and making same. G. G. Landis and V. Peters. 2,474,787, June 28.
Article of furniture, Reclining. A. Lorenz. 2,474,265, June 28.
Articulator, Dental. W. W. Moore. 2,474,488, June 28.
Artificial fibers, Manufacture of. E. T. Cline. 2,474,617, June 28.
Artificial stone walls, Manufacturing. D. F. Carlson. 2,474,654, June 28.
Artificial teeth, Forming. E. B. Kelly. 2,474,676, June 28.
Assembly and spacer therefor, Piston ring. H. P. Phillips. 2,474,403, June 28.
Attachment for hosiery machines. J. B. Hardison. 2,474,246, June 28.
Attachment for self-loading trucks, Shovel. M. Graves and A. Lankovski. 2,474,418, June 28.
Attachment for sewing machines, Top feed and alternating presser. R. J. Salier. 2,474,282, June 28.
Attachment, Self-feeder. G. Rankenburg. 2,474,368, June 28.
Attenuator. J. M. van Beuren. 2,474,794, June 28.
Attenuator for high-frequency pickup devices. J. M. van Beuren. 2,474,795, June 28.
Automatic fishing reel. A. D. Maury and A. T. Lyon. 2,474,541, June 28.
Automatic instantaneous electric water heater. J. E. Pitts, Jr. 2,474,637, June 28.
Azo compounds from 1-di-n-butylamino-2-nitro-butane. E. F. Degering and G. van Blema. 2,474,779, June 28.
Azo compounds from 1-N-morpholino-2-nitro propane. E. F. Degering and G. van Blema. 2,474,780, June 28.
Bag and making the same. S. G. Yount and P. R. Halstead. 2,474,770, June 28.
Balancing device, Brakehead. N. Flesch. 2,474,239, June 28.
Ball hitch for automobiles, Sliding. R. V. Crosley. 2,474,231, June 28.
Ballast lamp. W. C. Ellis, L. H. La Forge, Jr., and A. H. White. 2,474,473, June 28.
Basic-alkyl esters and their salts. F. F. Blicke. 2,474,651, June 28.
Bath for treating stainless steel products, Salt. A. F. Holden. 2,474,674, June 28.
Battery, Salt-water. J. T. Beechlyn. 2,474,716, June 28.
Bearing: *See*—
Reversible bearing.
Beater element for pulverizing apparatus. O. Craig. 2,474,305, June 28.
Bee comb foundation frame. L. B. and N. B. Smith. 2,474,382, June 28.
Belt loader. A. L. Bureau. 2,474,218, June 28.
Binder, Loose-leaf post. S. Segal. 2,474,698, June 28
Block: *See*—
Snatch block.
Blood treating apparatus, Pneumatic. J. R. Guarino. 2,474,665, June 28.
Bobbin holder for spinning and twisting frames. E. J. Abbott. 2,474,210, June 28.
Bobbin retainer for weft replenishing mechanisms. A. C. Krukonis. 2,474,632, June 28.
Bobbin tip support means for weft replenishing looms. R. G. Turner. 2,474,641, June 28.
Bolt with gauge members, Breech. A. Kurti. 2,474,743, June 28.
Bomb, Aerial. R. L. Kinion. 2,474,256, June 28.
Boot for horses, Quarter. A. E. Warren. 2,474,446, June 28.
Bottle support. J. E. Du Bois. 2,474,416, June 28.
Box: *See*—
Flower holder and box. Foldable compartment box.
Box for electric lines, Junction. A. Rothfuchs. 2,474,328, June 28.
Box for water tube boilers, Wall. G. P. Reintjes. 2,474,548, June 28.
Bracket attachment for motor vehicle windows. P. H. Behrens. 2,474,513, June 28.
Bracket for shades, curtains and draperies. S. A. Cavalier. 2,474,414, June 28.
Brake fluid pumping apparatus, Hydraulic. J. C. McMurray. 2,474,748, June 28.
Brake mechanism, Self-adjusting hydraulic. T. E. Miller. 2,474,749, June 28.
Brake with adjustable work stop and clamping means, Bending. V. F. Linder. 2,474,683, June 28.
Brassière. S. Silbert and H. Folb. 2,474,609, June 28.
Brazing cemented carbides to steel. C. D. Webb. 2,474,643, June 28.
Breakwater, Permeable. H. J. Humphrey. 2,474,786, June 28.
Breaker, Circuit. E. V. Sundt. 2,474,762, June 28.
Broiler and door assembly, Cooking stove. J. M. Cook and R. C. Lang. 2,474,225, June 28.
Bronzing materials. C. S. Fleming. 2,474,520, June 28.
Brush mechanism. C. A. Thomas. 2,474,601, June 28.
Brush, Selector. G. Deakin. 2,474,233, June 28.
Buckle. L. C. Schmith. 2,474,372, June 28.
Bucker, Convertible ice. H. J. Wieden, P. C. Traphagen, and E. F. Stoner. 2,474,563, June 28.
Burner and pilot, Gas. P. J. Patch. 2,474,547, June 28.
Calculator, Octantal error. G. Swift and C. B. Moore. 2,474,288, June 28.
Camera for photographing objects moving relatively to the camera. G. Rattray. 2,474,323, June 28.
Camera view and range finder. A. Simmon. 2,474,379, June 28.
Carbohydrate foods resistant to microorganisms, Making. G. H. Coleman and P. A. Wolf. 2,474,227, June 28.
Carbohydrate-rich foods resistant to microorganisms, Making liquid. G. H. Coleman and P. A. Wolf. 2,474,226, June 28.
Carrier: *See*—
Hat carrier.
Carton. F. C. Gluck. 2,474,783, June 28.
Carton. R. Guyer. 2,474,476, June 28.
Carton, Triple-edge reclosing. R. Guyer. 2,474,523, June 28.
Case: *See*—
Water filter carrying case
Casing structure, Hinged. P. J. Graham. 2,474,811, June 28.
Catalytic dehydrogenation of piperazine. J. K. Dixon. 2,474,782, June 28.
Cathode support. C. V. Litton. 2,474,263, June 28.
Cellulose saccharification. A. Hereng. 2,474,669, June 28.
Cellulosic products. L. Doub. 2,474,306, June 28.

Chain and mounting device therefor, Tire. J. G. Fogarty. 2,474,521, June 28.
Chair: *See*—
Easy chair.
Chair and table unit, Combination. M. C. Ivory. 2,474,252, June 28.
Chlorinated methylchlorosilanes and their hydrolysis products. W. F. Gilliam. 2,474,578, June 28.
Chloropyrenes, Manufacture of. P. G. Carter. 2,474,777, June 28.
Chuck, Air operated. J. B. Amstutz and O. E. Fierob. 2,474,771, June 28.
Chuck, Automatic lathe. J. F. Marshall. 2,474,633, June 28.
Chuck, Suction-operated. J. M. Wyer. 2,474,508, June 28.
Circuit: *See*—
Flow control circuit. Pulse receiving circuit.
Circuit arrangement for producing a saw-tooth current in the deflection coil of a cathode-ray tube and for producing a direct voltage for this tube. J. Haantjes and B. W. V. Schenau. 2,474,666, June 28.
Circuit breaker, Backfire. D. L. Miller. 2,474,487, June 28.
Circuit for cathode-ray apparatus deflection systems, Power recovery. A. W. Friend. 2,474,474, June 28.
Clamp. M. S. Lipman and W. W. Godon. 2,474,431, June 28.
Cleaner: *See*—
Air cleaner.
Cleaning apparatus, Air. J. L. Hart, Jr. 2,474,478, June 28.
Cleaning device, Tooth. M. J. McCaughley. 2,474,684, June 28.
Clothespin, Spring. G. R. Morton. 2,474,753, June 28.
Coating apparatus, Web. W. A. Roehm. 2,474,691, June 28.
Coaxial line termination. H. G. Nordlin. 2,474,272, June 28.
Coil having a slidable core and establishing the ratio between the maximum and minimum inductance thereof. T. A. Spoor. 2,474,761, June 28.
Coil shaping apparatus. F. E. Hook and R. O. Riggs. 2,474,528, June 28.
Coil supporting means. E. F. Lapham, Jr. 2,474,259, June 28.
Collapsible tie rack. P. Pestyner. 2,474,436, June 28.
Collecting and separating apparatus. C. B. Schneible and A. S. Lundy. 2,474,695, June 28.
Column assembly, including pressure fluid motors for moving objects longitudinally and angularly. A. L. Stone. 2,474,336, June 28.
Comb. G. F. Benco. 2,474,212, June 28.
Comb and file, Combination. E. V. Boudreaux. 2,474,570, June 28.
Communication and posting system. E. L. Schmidt. 2,474,438, June 28.
Commutation system and its application, especially to the scanning in television, Electrolonic. P. M. G. Toulon. 2,474,338, June 28.
Communication system, Multichannel carrier. K. G. Hodgson and F. Fairley. 2,474,249, June 28.
Communication system with automatic answer back and alarm signals, Telegraphic. E. E. Kleinschmidt. 2,474,257, June 28.
Compact forced-air heater. W. C. Parrish. 2,474,687, June 28.
Composition and production thereof, Concrete. F. Sladick, Sr. 2,474,381, June 28.
Compositions, Hydrocarbon oil. D. W. Young and P. W. Brakeley, Jr. 2,474,342, June 28.
Compressor, Multistage. G. Aue. 2,474,410, June 28.
Compressor or motor, Helical gear. G. K. W. Boestad. 2,474,653, June 28.
Concrete form board fastener. V. H. Moore. 2,474,587, June 28.
Connector: *See*—
Electrical connector. Flexible connector.
Control apparatus for cabins of aircraft, Temperature. H. T. Sparrow. 2,474,441, June 28.
Control apparatus for guns, Fire. M. K. Ingoldby. 2,474,739, June 28.
Control apparatus, Rate of movement. L. K. Hyde. 2,474,424, June 28.
Control circuits, Automatic frequency. G. Guanella. 2,474,354, June 28.
Control device, Safety. M. Dach. 2,474,232, June 28.
Control for electric motors. M. C. Richardson. 2,474,595, June 28.
Control for vapor discharge tubes and electric arcs. E. H. Haug. 2,474,525, June 28.
Control means for airplane landing gear for landing cross-wind. C. R. Jamison. 2,474,630, June 28.
Control mechanism for positioning a mast in alternate, predetermined positions. A. C. Middleton. 2,474,486, June 28.
Control mechanism for tractors, Automatic brake setting and clutch release. M. J. Smies. 2,474,598, June 28.
Control mechanism, Power plant. A. F. Schwendner. 2,474,697, June 28.
Control of dynamoelectric machines, Speed. E. A. Binney. 2,474,647, June 28.
Control of flying-wing aircraft. J. Lloyd. 2,474,585, June 28.
Control system, Air circulation. W. A. Ray. 2,474,369, June 28.
Control system for alternating currents, Electric winch. K. Mahnke. 2,474,267, June 28.
Control system for dynamoelectric machines, Automatic. W. F. Fell and E. S. Smith. 2,474,732, June 28.
Control unit, Shunt. J. L. and J. I. Stender. 2,474,600, June 28.
Controller, Coiling machine. D. W. Fath. 2,474,620, June 28.
Controlling device for wave guides, Transmission. R. M. Pease. 2,474,688, June 28.
Cooler: *See*—
Oil cooler.
Copolymers of vinyl isocoumarans with ethylenically unsaturated compounds and obtaining same. A. L. Barney. 2,474,612, June 28.
Copolymers of vinyl isocoumarans with 1,3-dienes and process for obtaining same. A. L. Barney. 2,474,614, June 28.
Copolymers of vinyl isocoumarans with styrenes and obtaining same. A. L. Barney. 2,474,613, June 28.
Cot, Protective. S. J. Krausnak. 2,474,535, June 28.
Coupling: *See*—
Reversible hydraulic coupling.
Coupling cooling. J. C. Busquet. 2,474,615, June 28.
Coupling for piping. J. Muller. 2,474,319, June 28.
Crystal structures, Piezoelectric. K. K. Garrison. 2,474,241, June 28.
Cuprous hydroxide and cuprous oxide, Production of. P. J. Rowe. 2,474,497, June 28.
Cuprous oxide, Preparation of. L. C. Klein. 2,474,533, June 28.
Cushion or mattress unit. E. J. Wines. 2,474,768, June 28.
Cutlery construction. J. G. Jackson. 2,474,425, June 28.
Dampening system, Gas line pulsation. F. M. Stephens. 2,474,555, June 28.
Dehydration of compounds by distillation with hydrophobic oil. W. S. Harmon. 2,474,735, June 28.
Dehydrator. C. O. Glasgow. 2,474,475, June 28.
Desk and table combination. A. Schomburg. 2,474,596, June 28.
Detector and signal for ducts, Smoke. C. N. Cahusac, 2,474,221, June 28.
Detector, Radiation. W. R. Baker. 2,474,773, June 28.
Detergent, Soapless-germicidally active. F. C. Bersworth. 2,474,412, June 28.
Device for applying new tread material to tires. T. P. Bacon, Jr. 2,474,511, June 28.
Device for filing type matrices. C. A. Carlton. 2,474,465, June 28.
Device for modifying electrical signals. A. Simmon. 2,474,380, June 28.
Device for sharpening cutlery. W. E. Fleming. 2,474,623, June 28.
Device for sharpening cutlery. W. E. and E. C. Fleming. 2,474,622, June 28.
Diaper support. H. B. Carter. 2,474,724, June 28.
Dilution and hydrolysis of diethyl sulfate solutions. L. A. Bannon. 2,474,569, June 28.
Dilution and hydrolysis of diethyl sulfate solutions. L. A. Bannon and C. E. Morrell. 2,474,568, June 28.
Dimmer device for indicating lamps. H. R. Kirkland. 2,474,677, June 28.
Discharge device, Electron. R. R. Back. 2,474,211, June 28.
Disengaging device, Belt. R. M. Barth. 2,474,457, June 28.
Dispenser: *See*—
Flint dispenser.
Dispenser for facial tissues. S. Golden. 2,474,784, June 28.
Dispensing device with bulb pump, Liquid. D. L. Spender and G. L. Butler. 2,474,442, June 28.
Dispensing means. A. L. Lambert and E. C. Franco-Ferreira. 2,474,744, June 28.
Display device and easel, Foldable. L. Ebert. 2,474,659, June 28.
Distributor for burner nozzles, Pulverized fuel. F. T. Hague. 2,474,477, June 28.
Domestic electric heater. C. C. Doyle. 2,474,472, June 28.
Drier: *See*—
Hair drier.
Drill holder and like tool. C. de la Source. 2,474,726, June 28.
Drilling fluid for heaving shale, Aqueous base. R. A. Salathiel. 2,474,330, June 28.
Drive, Flexible. J. E. Collins. 2,474,847, June 28.
Drive for tools, Ratchet. G. G. Shurtleff. 2,474,877, June 28.
Drum type induction furnace. M. Tama and J. L. Hoff. 2,474,443, June 28.
Dyestuffs and dyestuff intermediates, Cyanine. J. D. Kendall, H. G. Suggate, and H. W. Wood. 2,474,426, June 28.
Dyestuffs, Diphenylamine sulfonamide. G. W. Seymour, V. S. Salvin, and W. D. Jones. 2,474,333, June 28.
Dyestuffs, Monoazo. B. J. Heywood. 2,474,736–7, June 28.
Dynamoelectric machine. E. A. Binney. 2,474,648, June 28.
Easy chair. S. Shwarzowsky. 2,474,597, June 28.

Electric fan and electric heater assembly, Combined. J. T. Ransch and G. Towne. 2,474,594, June 28.
Electric motor. L. E. Segesman. 2,474,439, June 28.
Electric pressure indicator. R. C. Fuller. 2,474,662, June 28.
Electric water heater. P. C. Jones. 2,474,361, June 28.
Electrical connector. H. E. Goldstine and O. F. Voigt. 2,474,310, June 28.
Electrical distribution jack. E. W. Harris. 2,474,356, June 28.
Electrical plug. R. L. Avery. 2,474,454, June 28.
Electrode, Floating. S. W. Werner. 2,474,340, June 28.
Electromagnetic pump. J. W. Dickey and M. M. Henry. 2,474,349, June 28.
Electromagnetic switch. C. W. Kuhn. 2,474,742, June 28.
Electron discharge devices, Getter structure for. A. M. Skellett. 2,474,335, June 28.
Electron tube. P. G. Chevigny. 2,474,223, June 28.
Electronic switch. T. H. Clark. 2,474,224, June 28.
Enamel opacification and process, Vitreous H. and R. A. Oesterle. 2,474,636, June 28.
Engine: *See*—
Internal-combustion engine. Jet engine.
Engine conditioning compounds, Internal-combustion. R. I. Potter and H. Gillett. 2,474,437, June 28.
Excavating apparatus, Vertical shaft. A. A. Putnam. 2,474,803, June 28.
Expandable curling rod. J. Whyte. 2,474,449, June 28.
Extractor: *See*—
Fruit juice extractor.
Split ring retainer extractor.
Fabric reinforcement. R. G. Olson. 2,474,273, June 28.
Fabricated article, Shaped. H. E. Shearer and J. E. Van Nest. 2,474,375, June 28.
Fastener: *See*—
Concrete form board fastener. Rail fastener.
Fastener. W. Drus. 2,474,799, June 28.
Fastener for tumbling barrels, Closure. R. E. Gogema. 2,474,461, June 28.
Fastening means for camera covers. J. A. Henne. 2,474,307, June 28.
Fastening means for trousers and other garments. M. M. Isaacs. 2,474,629, June 28.
Fibrous sheets formed from an aqueous suspension of a mixture of fibers and butadiene-styrene copolymer. A. F. Owen. 2,474,801, June 28.
Firing the chamber of kilns. E. Blaha. 2,474,301, June 28.
Fish bait, Weedless artificial. A. H. Suhr. 2,474,383, June 28.
Fish lure. E. Kleppen and I. B. Hansen. 2,474,481, June 28.
Fishing float. H. C. Schwabe. 2,474,498, June 28
Fitting, Rail. J. C. Denler. 2,474,727, June 28.
Fixture for holding work to be ground, Magnetic. R. G. Nill. 2,474,800, June 28.
Flexible connector. L. R. and K. I. Robinson, and E. O. Berger. 2,474,690, June 28.
Flint dispenser. I. Shprentz. 2,474,630, June 28.
Floor covering of resilient pliable coated material, Composition. W. R. Walker. 2,474,767, June 28.
Flow control circuit. A. M. Lane. 2,474,681, June 28.
Flower holder and box. R. I. McLellan. 2,474,543, June 28.
Fluid for heaving shale, Drilling. R. A. Salathiel. 2,474,329, June 28.
Fluid heater. B. E. Mustee. 2,474,401, June 28.
Fluid wheel. R. C. Zeidler. 2,474,298, June 28.
Fly reel seat. R. L. Burden. 2,474,343, June 28.
Flywheel. S. D. Russell. 2,474,370, June 28.
Foldable compartment box. E. Morand. 2,474,751, June 28.
Folded table with paired legs. F. J. Woodruff. 2,474,450, June 28.
Fountain device, Bubble. L. H. Snyder. 2,474,286, June 28.
Fountain pen, Ball point. H. H. Band 2,474,300, June 28.
Fountain, Poultry drip. C. De La Grange. 2,474,469, June 28.
Frame: *See*—
Bee comb foundation frame.
Frames pivotally connected by stretch producing hinges, Bending. E. V. Block. 2,474,652, June 28.
Frequency modulated oscillator control. R. H. Ranger. 2,474,278, June 28.
Fruit juice extractor. H. C. Johnson. 2,474,390, June 28.
Furnace: *See*—
Drum type induction furnace.
Furniture. R. C. Herbolsheimer. 2,474,608, June 28.
Fuse, Grenade. M. Burden, Jr. 2,474,217, June 28.
Fused cast alumina refractory. J. C. McMullen. 2,474,544, June 28.
Game block of nonmagnetizable material having a magnetizable strip concealed in one end thereof. E. R. Munn. 2,474,365, June 28.
Game board of the lotto type. A. H. Cohen. 2,474,573, June 28.
Garment. M. Michel. 2,474,400, June 28.
Gas burner for furnace walls, Incandescent. F. O. Hess. 2,474,313, June 28.
Gas separator. E. S. Marsh. 2,474,540, June 28.
Gasket centering means. J. Rossman. 2,474,790, June 28.
Gauge: *See*—
Toe gauge. Valve gauge.
Gauge for external measurements of cylindrical bodies. F. M. Poole. 2,474,802, June 28.
Generating clutch teeth for extended intimate contact. N. L. Cobb. 2,474,393, June 28.
Generating system, Pulse. H. G. Busignies. 2,474,219, June 28.
Generating system, Pulse. E. M. Gatlund and P. W. Sokoloff. 2,474,275, June 28.
Generator: *See*—
Step wave generator.
Glassware-forming apparatus. E. Danner. 2,474,302, June 28.
Governor. J. L. Ray. 2,474,324, June 28.
Governor, Two-speed. W. M. May and L. E. Burgess. 2,474,316, June 28.
Grinder, Drill. E. E. Haynes. 2,474,357, June 28.
Gun mount for aircraft, Flexible. M. Watter. 2,474,560, June 28.
Gun mount for aircraft. Flexible. M. Watter and H. W. Doherty. 2,474,561, June 28.
Gyroscope. J. F. Schoeppel. 2,474,549, June 28.
Hair drier. E. K. Kending. 2,474,427, June 28.
Hanger: *See*—
Retractable clothesline hanger. Self-locking garment hanger.
Harvester, Combine. F. H. Templeton. 2,474,557, June 28.
Hat carrier. R. Beaudoin. 2,474,458, June 28.
Hayfork, Hydraulic. D. C. Shattuck. 2,474,374, June 28.
Headband and earphone mounting. J. Volkmann. 2,474,386, June 28.
Heater: *See*—
Automatic instantaneous electric water heater. Domestic electric heater. Electric water heater.
Compact forced-air heater. Fluid heater.
Heater burner, particularly fuel delivery and igniting means therefor. T. E. Spackman. 2,474,702, June 28.
Heater for hot-water furnaces, Oil. J. E. Craddock. 2,474,574, June 28.
Heating and ventilating system. R. M. Dilworth. 2,474,394, June 28.
Heating apparatus. A. W. Conley. 2,474,407, June 28.
Heating apparatus for burning a liquid fuel spray. G. A. Gillen. 2,474,417, June 28.
Heating apparatus, High-frequency dielectric. L. B. Himmel. 2,474,420, June 28.
Heating coil providing distribution of heating effect, Induction. T. H. Story. 2,474,703, June 28.
Heating device for hot cathode tubes. M. G. Favre. 2,474,575, June 28.
Heating system. L. A. Williams, Jr. 2,474,709, June 28.
Heating system, Electric. W. G. Grabeau. 2,474,664, June 28.
Helicopter. T. S. Keranen. 2,474,362, June 28.
Hexanebisdibutylamide as plasticizer for butadiene-acrylonitrile co-polymer. A. W. Campbell. 2,474,776, June 28.
High-frequency circuits. J. E. Young. 2,474,769, June 28.
High-speed precision limit bridge arrangement and method. A. L. Rossoff. 2,474,692, June 28.
Hoe stand. J. F. Hendrix. 2,474,579, June 28.
Holder: *See*—
Abrasive strip holder. Napkin holder. Sectional hinged fold holder.
Hot dog machine. A. E. Aff. 2,474,390, June 28.
Hull, Speedboat. R. L. Harvey. 2,474,667, June 28.
Hydraulic fishing tool. J. A. Armitage. 2,474,463, June 28.
Hydraulically operated brake valve. C. Hollerith. 2,474,738, June 28.
Hydrocarbons from oil shale, Recovery of. A. Clark and H. R. Sailors. 2,474,345, June 28.
Ice cream machine with perforated screw agitator. G. H. G. and J. P. C. Espinasse. 2,474,730, June 28.
Ignition system. J. L. Arthur. 2,474,510, June 28.
Ignition system. B. H. Short and H. L. Hartzell. 2,474,550, June 28.
Impact device, Pneumatic. O. C. Dresser, O. Norgorden, F. J. Shanahan, and C. R. Shuler. 2,474,235, June 28.
Increasing the aromaticity of hydrocarbon oil. J. F. Black. 2,474,213, June 28.
Indicating device for polyphase systems, Phase failure. V. J. Terry and R. Kelly. 2,474,290, June 28.
Indicator: *See*—
Electric pressure indicator. Radio-frequency in-phase indicator.
Quantitative deceleration indicator. Wall thickness indicator.
Indicator. H. Hurvitz. 2,474,628, June 28.
Indicator for aircraft, Position. J. A. MacLeod. 2,474,537, June 28.
Ingots, Heating. C. H. West. 2,474,504, June 28.
Inhibition of corrosion in wells. P. S. Viles and E. Q. Camp. 2,474,603, June 28.
Injection apparatus, Fuel. J. R. Hale. 2,474,419, June 28.
Injection pump. R. C. Groves. 2,474,396, June 28.

Instrument, Control. J. P. Vollrath. 2,474,208, June 28.
Instrument for machined parts, Testing. J. B. Lovick. 2,474,482, June 28.
Insulin preparations. P. Durel and P. Dubost. 2,474,729, June 28.
Internal-combustion engine. C. H. Jelley. 2,474,631, June 28.
Isobutylene with a diolefin, Polymerization of. F. A. Palmer. 2,474,592, June 28.
Jack: *See*—
  Electrical distribution jack.
Jack base, Safety. H. C. Clark, Jr. 2,474,725, June 28.
Jar. J. S. Beck. 2,474,459, June 28.
Jet engine. V. Isacco. 2,474,359, June 28.
Jig for swivel links. C. G. Fago. 2,474,289, June 28.
Jig, Type pallet aligning. G. G. Dorr. 2,474,658, June 28.
Jiggering machine for forming articles of plastic clay. H. F. Allen. 2,474,509, June 28.
Joint: *See*—
  Universal joint.
Keratin derivatives and preparation thereof. W. H. Ward and C. H. Binkley. 2,474,339, June 28.
Ketones, Reduction of. P. J. Breivogel. 2,474,216, June 28.
Kit, Fisherman's. O. A. Montgomery. 2,474,752, June 28.
Knife, Safety. A. C. Wolf. 2,474,609, June 28.
Knockdown stand or table. C. P. Molla. 2,474,318, June 28.
Lamp: *See*—
  Ballast lamp.
Lamp and its low-tension ignition, Arc. D. Reichinstein. 2,474,403, June 28.
Landing gear for aircraft, Retractable. R. Saulnier. 2,474,694, June 28.
Lasting machine. J. Fossa. 2,474,307, June 28.
Lath and manufacture thereof, Backed. L. W. Cross. 2,474,778, June 28.

Lawn mower, Two-speed. S. P. Townsend. 2,474,764, June 28.
Lighting equipment, Surface attached. K. Franck and V. S. Wince. 2,474,308, June 28.
Lighting fixture, Electric. V. J. Marchese. 2,474,484, June 28.
Lime and producing it, Especially reactive. W. G. Lovell, V. A. Miller, M. J. Mulligan, and H. K. Lichtenwalner. 2,474,207, June 28.
Liner, Surface fluxing coated. C. C. Heritage. 2,474,398, June 28.
Liquid diffuser. W. H. Wheeler and L. B. Wamnes. 2,474,605, June 28.
Liquid diffuser. W. H. Wheeler and L. B. Wamnes. 2,474,607, June 28.
Lock for automobile doors. J. Draewiecki. 2,474,519, June 28.
Lock for railroad spikes, Safety. W. T. Morris. 2,474,366, June 28.
Locking hinge for cigarette cases, Cigarette. F. Averna. 2,474,714, June 28.
Loose-leaf binder and music stand table, Combination. K. Kitchen. 2,474,532, June 28.
Lubricant, Aqueous. T. T. Rodgers. 2,474,325, June 28.
Lubricating device. B. E. Folke and R. H. Shepard. 2,474,661, June 28.
Lubricator. A. E. Moxley. 2,474,754, June 28.
Luminaire, Street lighting. T. W. Rolph. 2,474,326–7, June 28.
Luminaire, Surface attached fluorescent lighting. V. S. Wince. 2,474,341, June 28.
Machine for impregnating material with liquid. L. A. Kauffman. 2,474,254, June 28.
Maleic acid by oxidation of cyclohexane, Producing. A. J. Shmidl. 2,474,334, June 28.
Mandrel. E. G. Hill. 2,474,872, June 28.
Manganese with magnesium, Alloying. C. H. Mahoney and G. L. Lee. 2,474,538, June 28.
Marquise or canopy for buildings. A. J. Auble. 2,474,713, June 28.
Master-slave system. N. V. Fedotoff. 2,474,576, June 28.
Measuring apparatus and method, Dielectric. G. R. Leef. 2,474,280, June 28.
Measuring bridge, Null. R. A. Hampshire. 2,474,245, June 28.
Measuring difference in frequency of alternating currents. B. B. Jacobsen. 2,474,253, June 28.
Measuring instrument. W. H. Carling. 2,474,466, June 28.
Measuring machine having lens and reflector means, Length. F. Turrettini. 2,474,602, June 28.
Mechanism for bolt action rifles, Cocking. J. H. Barnett. 2,474,456, June 28.
Metallization of electrically nonconductive fabrics, fibrous materials, and porous materials. C. T. Suchy. 2,474,502, June 28.
Method and apparatus for simultaneously securing together and perforating paper webs. W. G. Borchers. 2,474,775, June 28.
Method and apparatus for size reduction and fiberizing of crude fibrous materials. F. J. Koehne. 2,474,314, June 28.
Method and machine for generating splines and the like. J. L. Williamson. 2,474,209, June 28.
Method of and apparatus for electrically welding studs to surfaces. J. M. Keir and E. A. Clapp. 2,474,331, June 28.
Method of and apparatus for partially dehydrating and cleansing oily wood preservatives. J. A. Vaughan and J. C. Vinson. 2,474,706, June 28.
Minnow bucket. J. B. Lewis. 2,474,745, June 28.
Modulator. F. A. Leibe and B. B. Mahler. 2,474,261, June 28.
Mold for concrete steps. C. Peterson. 2,474,321, June 28.
Mold for molding concrete and the like, Vacuum. K. P. Billner. 2,474,721, June 28.
Mold, Vulcanizer. R. A. McCloud, J. L. Daum and T. P. Bacon. 2,474,542, June 28.
Motor: *See*—
  Electric motor.
  Repulsion synchronous motor.
  Variable displacement radial vane rotary motor.
  Variable hydraulic pump or motor.
Motor control proportioning system, Electric. C. W. Klug. 2,474,679, June 28.
Motor switching mechanism, Electric. E. C. Wahlberg. 2,474,707, June 28.
Mounting: *See*—
  Headband and earphone mounting.
Mounting for rotary bearings, Rocker. R. W. Mortensen. 2,474,489, June 28.
Mounting in vehicle, Wheel. I. W. Simpkins. 2,474,283, June 28.
Mounting means for microscope arms and the like, Pivotal. T. G. Aitcheson and A. A. Gradiser. 2,474,644, June 28.
Mounting of cellular glass slabs. J. C. Kohl and J. A. Desmone. 2,474,363, June 28.
Mounting of fan units in ventilating shafts. T. Wylie. 2,474,611, June 28.
Music sheet turner. C. Gaines. 2,474,522, June 28.
Musical instrument. J. A. Brewer. 2,474,462, June 28.
Napkin holder. H. R. Thomas. 2,474,763, June 28.
Nitroalkyl substituted heterocyclic compounds and preparing them. M. Senkus. 2,474,791, June 28.
Nozzle adjustment for suction cleaners, Semiautomatic. H. B. White. 2,474,448, June 28.
Nozzle and tip for burning and welding torches. A. K. Hinchman. 2,474,673, June 28.
Nozzle, Spray. C. C. Sciuto. 2,474,332, June 28.
Nutcracker. D. H. Murph. 2,474,591, June 28.
Oil burner and pilot means therefor, Pot type. M. D. Huston. 2,474,530, June 28.
Oil cooler. W. R. Ramsaur. 2,474,689, June 28.
Oil cooling means, Internal-combustion engine. J. M. Davies. 2,474,518, June 28.
1-naphthol-1-2-carboxylic acid amide couplers for color photography. A. Weissberger, I. F. Salminen, and P. W. Vittum. 2,474,203, June 28.
Operating device, Sustained electric signal. J. W. Ritti. 2,474,405, June 28.
Operating mechanism, Furnace cover. C. H. West. 2,474,505, June 28.
Organosilicon compounds, Preparation of. A. G. Taylor. 2,474,444, June 28.
Ornament, Novelty. L. H. Durbin. 2,474,236, June 28.
Oscillator, Magnetron. W. P. Mason. 2,474,485, June 28.
Pack opening and sheet receiving means. B. G. Vaughn and W. V. Fell. 2,474,765, June 28.
Packaging means, Roll. R. Corson. 2,474,657, June 28.
Packer for wells. A. J. Penick. 2,474,491, June 28.
Pallet or skid for lifting trucks or the like. D. H. Bitney. 2,474,460, June 28.
Pattern marking letter. E. T. Kindt. 2,474,428, June 28.
Pen, Fountain. R. T. Wing. 2,474,389, June 28.
Pencil, Wiring. E. Burrell. 2,474,463, June 28.
Phosphor materials, Making. E. J. Wood. 2,474,506, June 28.
Photoelectric sorting, Two-dimensional. D. C. Cox. 2,474,230, June 28.
Photogrammetric caliper. J. E. Henry and L. W. Crouch. 2,474,248, June 28.
Piano construction. G. H. Stapely. 2,474,599, June 28.
Pickling of stainless steels. J. J. Healy, Jr., M. H. Taylor, and F. A. Abbiati. 2,474,526, June 28.
Piezometric thermionic tube. J. Rothstein. 2,474,280, June 28.
Piston for high-compression engines. S. M. Zoromakis. 2,474,564, June 28.
Piston ring. A. M. Brenneke. 2,474,413, June 28.
Pit-prop and the like. R. G. Cable. 2,474,464, June 28.
Planer and molding head, Circular burnisher. C. A. Walters. 2,474,559, June 28.
Plasticized elastomer compositions containing N-(hydroxyalkyl)-amides and their fatty acid esters. P. F. Tryon. 2,474,793, June 28.
Plate and lighting equipment using the same, Light refracting and transmitting. R. G. McPhail. 2,474,317, June 28.
Plate, Composite steel. B. Liebowitz. 2,474,682, June 28.
Play hat. P. Wolfe. 2,474,507, June 28.
Plow, Two-way. R. T. Evans and J. H. Clasen. 2,474,731, June 28.

Plug: *See*—
  Electrical plug.
  Polarity indicator plug.
Polarity indicator plug. W. L. Todd and E. E. Greenberg. 2,474,407, June 28.
Polyamine alcohols and preparing them. M. Senkus. 2,474,792, June 28.
Polymerization of olefinic hydrocarbons with Friedel-Crafts catalysts. A. B. Hersberger. 2,474,671, June 28.
Polymerization process, Low-temperature. F. W. Brakeley, Jr., and D. W. Young. 2,474,571, June 28.
Power-driven mechanism and portable demountable supporting standard therefor. B. R. Howard. 2,474,230, June 28.
Preparing a water-soluble beryllium compound. P. N. Burkard and R. McNabney. 2,474,392, June 28.
Preparing 1,2,3,4,5,6-hexachlorocyclohexane. G. H. Morey. 2,474,590, June 28.
Preparing partial esters of glycerine and fatty acids. M. H. Ittner. 2,474,740, June 28.
Preparing substituted propionic acids. R. D. Babson. 2,474,715, June 28.
Press: *See*—
  Ski press.
Prestressed concrete pipe and the like, Manufacture of. F. L. Fitzpatrick. 2,474,660, June 28.
Printing with sulfuric esters of leuco vat dyestuffs. W. B. and E. M. Hardy. 2,474,785, June 28.
Process and apparatus for tensionless handling of ruoning lengths of materials. H. H. Belcher. 2,474,717, June 28.
Producing packing structures. S. Bergstein. 2,474,891, June 28.
Producing pyrazine by catalytic dehydrogenation of piperazine. J. K. Dixon. 2,474,781, June 28.
Producing stannic oxide. S. M. Baxter. 2,474,645, June 28.
Production of a lithium-aluminum compound as a base for a conversion catalyst. A. E. Smith and G. A. Beeck. 2,474,440, June 28.
Propeller. W. Waterval. 2,474,562, June 28.
Propeller, Variable pitch. H. J. Nichols. 2,474,635, June 28.
Propulsion apparatus, Jet. H. J. D. McCollum. 2,474,685, June 28.
Propylene polymers, Production of. A. B. Hersberger and R. G. Heiligmann. 2,474,670, June 28.
Protection of objects. H. F. Meyer. 2,474,271, June 28.
Protective system for electric lines. E. H. Yonkers, Jr. 2,474,711, June 28.
Proteinaceous and fatty foods resistant to microorganisms, Making. G. H. Coleman and P. A. Wolf. 2,474,228, June 28.
Pulsation elimination in fluid streams. I. C. Bechtold, F. M. Stephens, and C. Newman. 2,474,512, June 28.
Pulsation elimination in fluid streams, Apparatus for. F. M. Stephens and C. F. Yates. 2,474,554, June 28.
Pulsations in gas lines, Elimination of. F. M. Stephens. 2,474,553, June 28.
Pulse modulator, Line. L. Greenwald. 2,474,243, June 28.
Pulse receiving circuit. L. A. B. Cabes. 2,474,220, June 28.
Pump: *See*—
  Electromagnetic pump.
  Injection pump.
  Reversible cycle heat pump.
  Stage lift pump.
Pumping apparatus. J. Mann. 2,474,539, June 28.
Punch, Multihole. J. A. Carpenter. 2,474,344, June 28.
Purse, Belt. H. Poliak. 2,474,405, June 28.
Quantitative deceleration indicator. E. P. Wunsch. 2,474,610, June 28.
Rack: *See*—
  Collapsible tie rack.
Radio-frequency in-phase indicator. N. Marchand. 2,474,268, June 28.
Raft or float, Life. J. L. Justice. 2,474,479, June 28.
Rail fastener. J. Forche. 2,474,352, June 28.
Ratchet means. M. A. Napier. 2,474,402, June 28.
Ratchet mechanism. W. B. Claus. 2,474,656, June 28.
Receiver, Ash. P. W. Rushforth. 2,474,371, June 28.
Receiver, Vibrating reactance panoramic radio. M. Wallace and H. G. Miller. 2,474,287, June 25.
Reclaiming the hydrocarbon content of used hydrocarbon lubricants. F. C. Bersworth. 2,474,411, June 28.
Recording apparatus, Oscillographic. R. M. Davis. 2,474,303, June 28.
Rectifying a neutral molten salt treating bath. P. H. Kramer. 2,474,680, June 28.
Reel: *See*—
  Automatic fishing reel.
Refrigerating unit having air circulating means, Multiple temperature. C. L. Spoonhour. 2,474,499, June 28.
Refrigerator. A. Amyot. 2,474,452, June 28.
Regulating apparatus, Heat. R. Amsler. 2,474,798, June 28.
Regulating system, Voltage. M. E. Hiehle. 2,474,580, June 28.
Regulator: *See*—
  Voltage regulator.
Regulator system, Power supply. C. Martines. 2,474,269, June 28.
Remote-control means for valves. D. G. Griswold. 2,474,355, June 28.
Remote-control system. D. A. Heisner. 2,474,527, June 28.
Remote-control system for selectively controlling a plurality of adjustable elements. D. R. Goddard. 2,474,663, June 28.
Remover, Snow. H. Schmitz. 2,474,759, June 28.
Rendering materials water-repellent. M. E. Thayer. 2,474,704, June 28.
Repeater, Start-stop regenerative. P. Pelle. 2,474,490, June 28.
Repulsion synchronous motor. H. E. Warren. 2,474,797, June 28.
Resin plasticized with ester of organic sulfonic acid, Polysulfone. G. E. Ellerman. 2,474,350, June 28.
Responsive device, Magnetic field. R. G. Rowe. 2,474,693, June 28.
Retainer. F. A. Jimerson. 2,474,360, June 28.
Retarding growth of microorganisms in light alcoholic beverages. G. H. Coleman and P. A. Wolf. 2,474,229, June 28.
Retractable clothesline hanger. G. B. Carroll. 2,474,655, June 28.
Reversible bearing. L. Doran. 2,474,728, June 28.
Reversible cycle heat pump. O. E. Clancy. 2,474,304, June 28.
Reversible hydraulic coupling. A. Lysholm. 2,474,588, June 28.
Ring: *See*—
  Piston ring.
Rod: *See*—
  Expandable curling rod.
Rust-preventing compounds. J. I. Wasson and J. C. Zimmer. 2,474,604, June 28.
Salt or pepper shaker or dispenser, Self-cleaning. D. E. Kitchen. 2,474,675, June 28.
Salts of streptothricin, Complex. H. L. Peck. 2,474,758, June 28.
Screen: *See*—
  Variable filter screen.
Screen and storm window, Combination. E. Madriguera. 2,474,747, June 28.
Screw driver. S. P. Wheeler. 2,474,295, June 28.
Screw driver, Spring-driven. A. Gunning. 2,474,626, June 28.
Seal for filler tubes. W. C. Wels. 2,474,503, June 28.
Seal, Pipe joint. A. L. Stone. 2,474,556, June 28.
Seat: *See*—
  Fly reel seat.
Seat structure, Adjustable. A. Lorenz. 2,474,264, June 28.
Sectional hinged fold holder. F. W. Steinmeyer. 2,474,552, June 28.
Self-locking garment hanger. S. Kreitmayr. 2,474,429, June 28.
Sensitized papers having cellulose ether sizing, Diazotype. S. C. Slifkin. 2,474,700, June 28.
Separating the stereoisomers of α-hydroxy-β,β-dimethyl-gamma-butyrolactone. R. H. Beutel and M. Tishler. 2,474,719, June 28.
Separation apparatus, Heavy-media. J. J. Bean. 2,474,774, June 28.
Separator: *See*—
  Gas separator.
Servomotor, Follow-up. W. A. Ray. 2,474,279, June 28.
Sewing machine unit. G. Sauer. 2,474,331, June 28.
Shampoo board, Child's. H. B. and L. D. Brose. 2,474,572, June 28.
Sheet material, Heat-sealable. R. A. Farrell and C. L. Wagner. 2,474,610, June 28.
Shifting mechanism, Belt. M. L. Dodge. 2,474,470, June 28.
Shoe and table, Ironer. W. C. Erler. 2,474,351, June 28.
Shoe for welding machines, Grounding. L. H. Knost. 2,474,534, June 28.
Shuffleboard cue. E. S. Boose. 2,474,728, June 28.
Signal transmission system, Electrical. C. de Vriendt and L. A. B. Cabes. 2,474,234, June 28.
Signal type torque indicating wrench. M. Hattan. 2,474,247, June 28.
Ski press. G. M. O'Neill. 2,474,274, June 28.
Slurry coal, Dewatering and coking. A. F. Howe. 2,474,251, June 28.
Snatch block. W. H. McKissick. 2,474,436, June 28.
Speed attachment for drill presses, High-low. F. K. Stein. 2,474,500, June 28.
Speed drive, Variable. L. Perhacs. 2,474,789, June 28.
Spike, Railroad. R. A. Rulz. 2,474,281, June 28.
Splint for small animals, Surgical. C. T. Mason. 2,474,634, June 28.
Split ring retainer extractor. H. P. Carrier. 2,474,222, June 28.
Splitting machine, Intestine. M. S. Atkisson and A. E. Schneider. 2,474,299, June 28.
Stabilizer mechanism, Sidedraft. W. Vutz. 2,474,445, June 28.
Stage lift pump. W. G. Hurley. 2,474,423, June 28.
Stand: *See*—
  Hoe stand.
Starter apparatus, Engine. S. Gilbert. 2,474,734, June 28.
Stator, Split. G. F. Behringer. 2,474,646, June 28.
Steel, Alloy. A. G. Waggoner and W. B. Brooks. 2,474,766, June 28.
Step wave generator. H. Lyons. 2,474,266, June 28.
Sterilizer, Toothbrush. J. Federico. 2,474,621, June 28.
Stroller, Doll. A. A. Wasserman. 2,474,888, June 28.

Stylus. G. Halpern. 2,474,312, June 28.
Transport. F. F. Sutherland, and W. T. Stearn.

Stylus. G. Halpern. 2,474,312, June 28.
Substituted 3-carbamyl-2-piperidones and method for preparing them. G. H. Morsy. 2,474,589, June 28.
Supply system for carrier communication systems, Power. R. Kelly. 2,474,255, June 28.
Support: *See*—
Bottle support. Trailer drawbar support
Cathode support. Typewriter support.
Diaper support.
Support attachment, Curtain and drape rod. M. A. Smith. 2,474,551, June 28.
Support for shades, curtains, and drapes, Combined. F. E. Mentz. 2,474,434, June 28.
Support for voltage regulators. W. S. Master. 2,474,270, June 28.
Supporting of casements. J. R. Cornelius. 2,474,468, June 28.
Suspension, Swing. S. Bender. 2,474,718, June 28.
Switch: *See*—
Electromagnetic switch. Time switch.
Electronic switch.
Synchronizer for photographic shutters, Power-driven flash. A. Simmon and L. L. Weisglass. 2,474,878, June 28.
Syringe. L. Rayman. 2,474,496, June 28.
System for the preginning of cotton. J. J. Wallace. 2,474,642, June 28.
Table: *See*—
Knockdown stand or table.
Takeup of electric cords. E. Applegate. 2,474,566, June 28.
Tape for laminating, Adhesive. C. L. Weidner and L. W. Eger. 2,474,292, June 28.
Taper sided split rings, Lapping. J. W. Howlett and A. J. Woolcott. 2,474,358, June 28.
Television receiver and picture projector, Combination. N. H. Young, Jr. 2,474,297, June 28.
Temperature control means. W. K. Lewis, Jr. 2,474,583, June 28.
Tertiary alkyl sulfonamides, Preparation of. L. T. Eby. 2,474,237, June 28.
Test for capacitors. Dielectric strength. A. J. Deyrup. 2,474,415, June 28.
Testing electrode. C. J. Schmid and W. J. Koch. 2,474,838, June 28.
Thread-trimming and pull-off mechanism for sewing machines. A. R. Wood. 2,474,710, June 28.
Time switch. E. V. Platt. 2,474,494, June 28.
Tire guard. G. L. Smith. 2,474,284, June 28.
Tire tool. W. J. Cox. 2,474,515, June 28.
Tobacco can elevator. A. H. Lavietes. 2,474,315, June 28.
Toe gauge. B. Castiglia. 2,474,616, June 28.
Tool: *See*— Tire tool.
Drill holder and like tool.
Hydraulic fishing tool.
Tool for external cylindrical surfaces, Honing. W. J. Papciak. 2,474,756, June 28.
Toolholder. V. Jankowski. 2,474,675, June 28.
Tool-operating attachment. H. R. Billeter. 2,474,720, June 28.
Torsional vibration exhibiting means. T. C. Van Degrift. 2,474,408, June 28.
Towing device for trailers. D. Wiltsee. 2,474,296, June 28.
Toy, Airplane. J. Moeller. 2,474,750, June 28.
Toy, Child's educational. R. Wheelock. 2,474,447, June 28.
Toy ferry system. W. L. Shepheard. 2,474,376, June 28.
Toy, Graphic facsimile. D. W. Moore, Jr. 2,474,545, June 28.
Toy wagon. H. L. Seiden. 2,474,373, June 28.
Traction appliance for motor vehicle wheels, Antiskid. E. P. Schwab. 2,474,696, June 28.
Traction device, Vehicle. G. W. Smith, Jr. 2,474,640, June 28.
Traction-gaining device. E. Linderme. 2,474,262, June 28.
Trailer drawbar support. J. E. Luttrell. 2,474,483, June 28.
Transformer, Compensated magnetic-leakage-type. W. Foerste. 2,474,624, June 28.
Transformer, High-frequency. H. C. Early, W. G. Dow, and R. Ohlsson. 2,474,395, June 28.
Transmission, Hydraulic. G. A. Wahlmark. 2,474,706, June 28.
Transmission line. S. B. Pickles. 2,474,277, June 28.
Transport. F. F. Sutherland, and W. T. Stearn. 2,474,337, June 28.
Treating hydrophilic colloids to avoid swelling during washing. W. D. Ramage. 2,474,867, June 28.
Treatment of vegetable tissue. C. Birdseye. 2,474,649–50, June 28.
Trysquare. C. E. Gancer. 2,474,577, June 28.
Tube: *See*—
Electron tube.
Piezometric thermionic tube.
Tube for high frequencies. Amplier. G. Liebmann. 2,474,584, June 28.
Turbine apparatus. R. P. Kroon. 2,474,258, June 28.
Turbine, Combustion. S. E. Richeson. 2,474,404, June 28.
Turbine plant, Gas. I. K. E. Jung. 2,474,582, June 28.
Turned slippers or similar footgear, Manufacture of. K. E. Tholson. 2,474,553, June 28.
Typewriter support. J. Vale. 2,474,385, June 28.
Typing mechanism for typewriters or like machines, Power-operated. J. J. Kittel. 2,474,741, June 28.
Ultra-short-wave signal-translating device. H. A. Wheeler. 2,474,608, June 28.
Umbrella, Tractor. W. Daniel. 2,474,516, June 28.
Universal joint. J. H. Hullinger. 2,474,529, June 28.
Unloading valve. B. N. Ashton. 2,474,772, June 28.
Utensil, Culinary. W. C. P. Zabel, and R. C. Helfenbein. 2,474,451, June 28.
Vacuum apparatus for impregnating floors. L. M. Applegate. 2,474,567, June 28.
Valve: *See*—
Hydraulically operated Unloading valve.
brake valve.
Valve. C. E. Lauc. 2,474,430, June 28.
Valve gauge. N. G. Weeks. 2,474,294, June 28.
Vaporizer. F. S. Abbott. 2,474,565, June 28.
Variable displacement radial vane rotary motor. S. F. Cserner. 2,474,348, June 28.
Variable filter screen. L. R. Aparicio. 2,474,712, June 28.
Variable hydraulic pump or motor. J. E. Lundegard. 2,474,536, June 28.
Vehicle suspension. G. E. Burks. 2,474,514, June 28.
Ventilator, Automatic. G. J. Smith. 2,474,760, June 28.
Verge plate, Shock-damping. K. Howle. 2,474,627, June 28.
Vinyl chloride, Production of. W. L. J. de Nie. 2,474,206, June 28.
Voltage regulator. G. B. Steincross. 2,474,287, June 28.
Walking aid, Adjustable. H. E. Binme. 2,474,722, June 28.
Wall thickness indicator. J. S. Pelan. 2,474,320, June 28.
Water filter carrying case. D. H. Quinn. 2,474,822, June 28.
Wax applier, Self-feeding paste floor. W. S. Gallagher. 2,474,733, June 28.
Weather resistant composition. P. T. Gidley. 2,474,309, June 28.
Weather strip. F. R. Anderson. 2,474,409, June 28.
Welding electrode. F. G. Marbach. 2,474,788, June 28.
Welding machine, Bank strip. W. F. Smith. 2,474,285, June 28.
Welding mechanism, Multipoint spot. H. B. Putnam. 2,474,593, June 28.
Well logging. L. G. Howell. 2,474,581, June 28.
Well Point, Automatic. T. F. Moore, E. J. Moore, and M. M. Dacy. 2,474,364, June 28.
Wheel: *See*—
Fluid wheel.
Wick-supporting device. C. E. Nicolet. 2,474,606, June 28.
Winding machine, Armature. W. A. Goodman. 2,474,853, June 28.
Winding machine, Coil. L. E. Pamphlion. 2,474,755, June 28.
Wrench: *See*—
Signal type torque indicating wrench.
X-ray equipment. O. C. Hollstein. 2,474,421, June 28.
X-ray equipment. O. C. Hollstein. 2,474,422, June 28.
X-ray monochromator, Focusing. H. Friedman. 2,474,240, June 28.
Zinc aluminate-group VI metal oxide catalyst, Preparation of. K. K. Kearby. 2,474,215, June 28.
Zinc aluminate spinel catalyst, Preparation of. J. F. Black. 2,474,214, June 28.

CLASSIFICATION OF PATENTS

ISSUED JUNE 28, 1949

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

2— 21: 2,474,535
